Reliable Study CAD Questions & Reliable CAD Test Price

Furthermore, after acquiring our Certified Application Developer-ServiceNow CAD Exam Questions preparation material, you will receive free updates for 365 days. NewPassLeader provides up-to-date Certified Application Developer-ServiceNow exam questions, latest test dumps demo and latest test experience will make you success in your career. And price is affordable.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q76-Q81):

NEW QUESTION # 76

Which Application Access configuration field(s) are NOT available if the Can read configuration field is NOT selected?

- A. Can create, Can update, and Can delete
- B. Allow configuration

- C. Can read does not affect the availability of other Application Access fields
- D. All access to this table via web services

Answer: A

Explanation:

"You must first select read access to grant any other API record operation." https://docs.servicenow.com/bundle/tokyo-application-development/page/build/applications/reference/r_TableApplicationAccessFields.html The Application Access configuration fields control the access level for an application and its tables. The following Application Access configuration fields are not available if the Can read configuration field is not selected:

Can create. This field determines whether users can create records on the application tables.

Can update. This field determines whether users can update records on the application tables.

Can delete. This field determines whether users can delete records on the application tables.

These fields are not available because they depend on the Can read field, which determines whether users can view records on the application tables. If users cannot read records, they cannot create, update, or delete them either.

The following Application Access configuration fields are available regardless of the Can read configuration field:

All access to this table via web services. This field determines whether users can access the application tables using web services, such as REST or SOAP.

Allow configuration. This field determines whether users can configure the application tables, such as adding or modifying fields, views, or indexes. References: Application Access, Certified Application Developer (CAD) Learning Path

NEW QUESTION # 77

It is best practice to define the business requirements and the process(es) an application will manage as part of the application development plan. What are some of the considerations to document as part of the business process?

- A. Business problem, users/stakeholders, available licenses, and database capacity
- B. Business problem, data input/output, users/stakeholders, and database capacity
- C. Business problem, data input/output, project schedule, and process steps
- **D. Business problem, data input/output, users/stakeholders, and process steps**

Answer: D

Explanation:

It is best practice to define the business requirements and the process(es) an application will manage as part of the application development plan. The following are some of the considerations to document as part of the business process:

* Business problem. This is the description of the problem or opportunity that the application is intended to address or exploit. It should include the background, context, scope, and objectives of the problem or opportunity.

* Data input/output. This is the specification of the data that the application will need to collect, store, manipulate, and display. It should include the data sources, formats, validations, transformations, and integrations of the data.

* Users/stakeholders. This is the identification of the users and stakeholders who will be involved in or affected by the application. It should include the roles, responsibilities, expectations, and needs of the users and stakeholders.

* Process steps. This is the definition of the steps and activities that the application will perform or support. It should include the inputs, outputs, triggers, conditions, and outcomes of each step or activity.

The following are not some of the considerations to document as part of the business process:

* Project schedule. This is the estimation of the time and resources required to complete the application development project. It should include the milestones, deliverables, dependencies, and risks of the project. This is not part of the business process, but part of the project management plan.

* Database capacity. This is the measurement of the amount of data that the application will generate and store in the database. It should include the data volume, growth rate, retention policy, and backup strategy of the data. This is not part of the business process, but part of the technical design and architecture of the application.

* Available licenses. This is the number and type of licenses that the application will consume or require from the ServiceNow platform. It should include the license model, cost, and allocation of the licenses.

This is not part of the business process, but part of the financial and legal aspects of the application.

NEW QUESTION # 79

Which path would you take to access the table configuration page from a form?

- A. The Form Context menu > Configure > Dictionary
- B. The Form Context menu > View > Table
- C. The Form Context menu > View > Show Table
- **D. The Form Context menu > Configure > Table**

Answer: D

NEW QUESTION # 80

Identify the way(s) an application can respond to an Event generated by the `gs.eventQueue()` method.

- a) Script Action
- b) Scheduled Script Execution (Scheduled Job)
- c) UI Policy
- d) Email Notification

- A. a and c
- B. b and c
- **C. a and d**
- D. c

Answer: C

Explanation:

"There are two possible ways to respond to events:

- Email Notification

- Script Action" - see this quote in link below:

https://developer.servicenow.com/dev.do#!/learn/learning-plans/tokyo/new_to_servicenow
