Oracle 1z0-1057-25 Exam Dumps - 100% Pass Guarantee With Latest Demo [2026]

We all well know the status of Oracle certification 1z0-1057-25 exams in the IT area is a pivotal position, but the key question is to be able to get Oracle 1z0-1057-25 certification is not very simple. We know very clearly about the lack of high-quality and high accuracy exam materials online. Exam practice questions and answers Braindumpsqa provide for all people to participate in the IT industry certification exam supply all the necessary information. Besides, it can all the time provide what you want. Buying all our information can guarantee you to pass your first Oracle Certification 1z0-1057-25 Exam.

Oracle Project Management Cloud 2025 Implementation Professional Sample Questions (Q102-Q107):

NEW QUESTION # 102

Your customer wants to assign the Net 45 payment term to all sets except for the corporate business unit specific set, which is assigned the Net 15 payment term. At transaction entry, the list of values for payment terms consists of only one set of data: the set that is assigned to the transaction's business unit.

Which reference data sharing method would you set up to meet the customer requirement? (Choose the best answer.)

- A. assignment to one set only; no common values allowed
- B. assignment to multiple sets; common values allowed
- C. assignment to multiple sets; no common values allowed
- D. assignment to one set only with common values

Answer: C

Explanation:

Reference <https://docs.oracle.com/en/cloud/saas/applications-common/19b/facia/define-enterprise-structures.html#FACIA462453>

Reference Data Sharing Methods

Variations exist in the methods used to share data in reference data sets across different types of objects. The following list identifies the methods:

Assignment to one set only, no common values allowed. This method is the simplest form of sharing reference data that allows assigning a reference data object instance to one and only one set. For example, Asset Prorate Conventions are defined and assigned to only one reference data set. This set can be shared across multiple asset books, but all the values are contained only in this one set.

Assignment to one set only, with common values. This method is the most commonly used method of sharing reference data that allows defining reference data object instance across all sets. For example, Receivables Transaction Types are assigned to a common set that is available to all the business units. You need not explicitly assign the transaction types to each business unit. In addition, you can assign a business unit-specific set of transaction types. At transaction entry, the list of values for transaction types includes the following:

Transaction types from the set assigned to the business unit.

Transaction types assigned to the common set that is shared across all business units.

Assignment to multiple sets, no common values allowed. The method of sharing reference data that allows a reference data object instance to be assigned to multiple sets. For instance, Payables Payment Terms use this method. It means that each payment term can be assigned to one or more than one set. For example, you assign the payment term Net 30 to several sets but assign Net 15 to a set specific only to your business unit.

At transaction entry, the list of values for payment terms consists of only the set that is assigned to the transaction's business unit.

Note: Oracle Fusion Applications contains a reference data set called Enterprise. Define any reference data that affects your entire enterprise in this set. Also update the data set going forward as you create new reference data items.

NEW QUESTION # 103

Your customer wants to generate accounting based on project information associated with the transaction for all subledger transactions. Identify three subledger applications for which the project source is available for deriving accounts when configuring subledger accounting. (Choose three.)

- A. Receipt Accounting
- B. Fixed Asset
- C. Purchasing
- D. Payables

Answer: A,C,D

Explanation:

Ref: <https://docs.oracle.com/en/cloud/saas/project-portfolio-management/19b/oapfin/project-costing-configuration-define-project-costing-integrations.html#OAPFM3094605> Topic - Deriving Projects-Related Accounts

NEW QUESTION # 104

Your customer has different accounting and project accounting periods, and sometimes enters invoices with an invoice date in the open project accounting and closed accounting periods. Which two statements are true about how project accounting and accounting dates will be populated in such invoices? (Choose two.)

- A. Accounting date is the same as the original invoice date.
- B. Project accounting date is the last day of the open project accounting period.
- C. Project accounting date is the first day of the first open project accounting period.
- D. Project accounting date is the same as the original invoice date.
- E. Accounting date is the first day of the first open accounting period.

Answer: A,C

Explanation:

When an invoice is entered with an invoice date in the open project accounting and closed accounting periods, the accounting date is the same as the original invoice date, but the project accounting date is the first day of the first open project accounting period. This ensures that the invoice is accounted in the correct accounting period and recognized in the correct project accounting period.

NEW QUESTION # 105

Your customer has a requirement to import and process third-party transactions that are "costed" and "accounted".

Which configuration option needs to be set satisfy the requirement? (Choose the best answer.)

- **A. Transaction Source Options**
- B. Document Options
- C. Document Entry Options
- D. Import Options

Answer: A

Explanation:

Reference https://docs.oracle.com/cd/E51367_01/projectop_gs/OAPJC/F1071488AN1004C.htm To import and process third-party transactions that are costed and accounted, you need to set the Transaction Source Options for the transaction source that you use to import the transactions. The Transaction Source Options allow you to specify whether the transactions are costed and accounted by the source system or by Oracle Fusion Cost Management. You can also specify whether to validate and transfer costs and accounting entries to projects and general ledger. Reference: <https://docs.oracle.com/en/cloud/saas/project-portfolio-management/20c/oapfm/manage-project-costs.html#OAPFM2355941>

NEW QUESTION # 106

While opening an organization tree on the Manage Organization Trees page, you notice that the hierarchy status is displayed as Inactive. Identify the two reasons for the organization tree to be in Inactive status. (Choose two.)

- **A. You used Create Tree Version in the action menu.**
- B. You selected the Edit icon for opening the hierarchy.
- C. You opened the hierarchy by clicking the name.
- D. You used View Tree Version in the action menu.
- **E. You used Create Tree in the action menu.**

Answer: A,E

Explanation:

When you use Create Tree or Create Tree Version in the action menu, you create a new organization tree or a new version of an existing tree, respectively. These actions result in an Inactive status for the organization tree, until you activate it. When you use View Tree Version or select the Edit icon or click the name of the tree, you open an existing organization tree that has an Active status.
