## Appian Certified Analyst Sample Questions (Q44-Q49):

### NEW QUESTION # 44

You are translating a user requirement into a user story and need to ensure that the desired functionality will be delivered as expected.

What needs to be written into the user story to ensure it will meet the requirement?

- A. Acceptance criteria
- B. Test Script
- C. Business value
- D. Estimation of effort to develop

**Answer: A**

Explanation:

When translating a user requirement into a user story, it is essential to include acceptance criteria to ensure that the desired functionality will be delivered as expected. Acceptance criteria provide clear, testable conditions that define when a user story is complete and meets the requirement. This ensures that the development team has a clear understanding of what needs to be built and how it will be validated, reducing the risk of miscommunication and ensuring the final product aligns with the user's needs. Appian Documentation - Writing Effective User Stories Note: While business value (B) and estimation of effort (A) are important elements of a user story, they do not directly ensure that the functionality will meet the requirement. The test script (C) is typically created after the user story is developed.

### NEW QUESTION # 45

According to best practices, which two types of tests should be considered during user acceptance testing (UAT)?

- A. Load testing
- B. Regulation acceptance testing
- C. Functional testing
- D. Platform security testing

**Answer: B,C**

Explanation:

Regulation Acceptance Testing (C): During User Acceptance Testing (UAT), it is essential to ensure that the application complies with industry regulations and standards. Regulation acceptance testing focuses on verifying that the system adheres to legal and compliance requirements specific to the industry or region where the application will be used. This ensures that the application meets all necessary regulatory guidelines before going live. Appian Documentation - Testing and Validation Functional Testing (D): Functional testing is a critical component of UAT as it verifies that the application's functionality works as expected from the end-user's perspective. This includes validating that all features, workflows, and business processes perform correctly according to the specified requirements. UAT is the final phase where end-users interact with the application to confirm that it meets their needs and performs as intended. Appian Documentation - Functional Testing Note: Load testing (A) and platform security testing (B) are important types of tests but are usually conducted during performance and security testing phases rather than UAT. UAT focuses more on ensuring the application meets business requirements and end-user expectations.

### NEW QUESTION # 46

Which three use cases are best suited for implementation with Appian?

- A. A use case that requires the editing of documents without third-party integration
- B. A use case that can be developed and run offline only
- C. A use case that requires multiple approval workflows
- D. A use case that requires integrations with different systems
- E. A use case that requires reporting and displaying graphs

**Answer: C,D,E**

Explanation:

A use case that requires integrations with different systems (A): Appian is designed to integrate seamlessly with various external systems, making it suitable for use cases that involve data exchange or communication between multiple systems. This capability allows for the creation of comprehensive and connected business processes within a single platform. Appian Integration Capabilities

A use case that requires multiple approval workflows (C): Appian excels in automating and managing complex business workflows, including those that require multiple layers of approval. Its workflow engine supports the orchestration of tasks, ensuring that the right people are involved in the process at the right time. Appian Workflow Automation

A use case that requires reporting and displaying graphs (E): Appian provides robust reporting and analytics capabilities, allowing users to create detailed reports and visualizations. This makes it an ideal choice for use cases where data needs to be reported and visualized effectively. Appian Reporting and Analytics

#### NEW QUESTION # 47

A given user story has a description and an acceptance criterion.

Which two other things are needed to mark the story as ready?

- A. Sprint number
- B. Developer assignment
- C. Priority
- D. Estimation

Answer: C,D

#### NEW QUESTION # 48

You are designing a user interface that requires a confirmation message when the user attempts to delete a row.

Review the image with the confirmation message:

"Are you sure you want to delete the item?"

According to best practices, which button labels should you choose?

- A. Cancel, Delete
- B. False, True
- C. Reject, Approve
- D. Back, Next

Answer: A

Explanation:

According to UI/UX best practices, the button labels in a confirmation dialog should be clear and directly related to the action the user is about to take. "Cancel" allows the user to abort the action, while "Delete" confirms the action to delete the item. This approach ensures that the user understands exactly what will happen when they click either button, reducing the risk of accidental deletion or confusion.
