These GitHub GitHub-Copilot bear the closest resemblance to the actual GitHub-Copilot dumps that will be asked of you in the exam.

GitHub CopilotCertification Exam Sample Questions (Q54-Q59):

NEW QUESTION # 54

What are the different ways to give context to GitHub Copilot to get more precise responses?

Each correct answer presents part of the solution. (Choose two.)

- A. Access developer's previous projects and code repositories to understand their coding style without explicit permission.
- B. Utilize chat variables like #file and #editors to anchor the conversation within the specific context of the files or editors in use.

- C. Utilize to interpret developer's thoughts and intentions without any code or comments.
- D. Engage with chat participants such as @workspace to incorporate collaborative context into the responses.

Answer: B,D

Explanation:

Using mentions like @workspace brings the entire repository context (files, branches, etc.) into the chat, helping Copilot Chat tailor its suggestions to your project.

Employing chat variables such as #file and #editors signals exactly which file or editor pane you're referring to, so Copilot can anchor its responses in that specific context.

NEW QUESTION # 55

How does GitHub Copilot assist developers in reducing the amount of manual boilerplate code they write?

- A. By predicting future coding requirements and pre-emptively generating boilerplate code
- B. By engaging in real-time collaboration with multiple developers to write boilerplate code.
- C. By refactoring the entire codebase to eliminate boilerplate code without developer input.
- D. By suggesting code snippets that can be reused across different parts of the project.

Answer: D

Explanation:

GitHub Copilot identifies repetitive patterns and offers ready-to-use code snippets - such as class definitions, CRUD operations, or setup routines - so you don't have to write the same boilerplate from scratch.

NEW QUESTION # 56

A large enterprise wants to enhance the code assistance support for their developers by incorporating internal code standards and best practices into GitHub Copilot. The IT team is also looking for scalable AI assistance with enterprise-level data management and governance. Which of the following plans can best accommodate this requirement?

- A. GitHub Copilot for Enterprise
- B. GitHub Copilot for Business
- C. GitHub Copilot Business for non-GitHub-hosted repositories
- D. GitHub Copilot for Individual

Answer: A

Explanation:

GitHub Copilot Enterprise includes support for private Knowledge Bases, which enables integration of internal documentation, best practices, and custom code snippets. It also supports enterprise-grade governance, security, and policy enforcement features-ideal for large organizations.

NEW QUESTION # 57

Which Copilot Individual features are available when using a supported extension for Visual Studio, VS Code, or JetBrains IDEs? (Each correct answer presents part of the solution. Choose two.)

- A. Chat
- B. Knowledge Base
- C. Code suggestions
- D. Pull Request Diff Analysis

Answer: A,C

NEW QUESTION # 58

How does GitHub Copilot assist developers in minimizing context switching?

- A. GitHub Copilot can automatically handle project management tasks.
- B. GitHub Copilot allows developers to stay in their IDE.
- C. GitHub Copilot can completely replace the need for human collaboration.
- D. GitHub Copilot can predict and prevent bugs before they occur.

Answer: B

Explanation:

By surfacing code suggestions and documentation directly in your editor, Copilot keeps you working within your IDE and reduces the need to switch to external resources.
