## WGU D282: Cloud Foundations Exam 2025/2026 | 100% GUARANTEED PASS | BRAND NEW VERSION | Verified Questions & Correct Answers | Based on Official WGU Cloud Curriculum

**1. What are the key differences between Infrastructure as a Service (IaaS) and Platform as a Service (PaaS) in cloud computing?**

**Answer:**
IaaS provides virtualized computing resources over the internet, allowing users to manage operating systems, storage, and applications themselves. PaaS, on the other hand, offers a platform with tools and services to develop, test, and deploy applications without managing the underlying infrastructure directly.

**2. How does the pay-as-you-go model in cloud computing benefit organizations financially?**

**Answer:**
The pay-as-you-go model allows businesses to pay only for the resources they actually use, which helps reduce capital expenditure. This model supports better budget management, reduces wasteful spending, and offers flexibility in scaling resources based on real-time demand.

**3. What is the shared responsibility model in cloud security and why is it important?**

**Answer:**
The shared responsibility model outlines the division of security tasks between the cloud provider and the customer. While the provider secures the infrastructure, the customer secures their data and applications. This model ensures clarity in security roles and reduces vulnerabilities.

There is no doubt that obtaining this Scripting-and-Programming-Foundations certification is recognition of their ability so that they can find a better job and gain the social status that they want. Most people are worried that it is not easy to obtain the certification of Scripting-and-Programming-Foundations, so they dare not choose to start. We are willing to appease your troubles and comfort you. We are convinced that our Scripting-and-Programming-Foundations test material can help you solve your problems. Compared to other learning materials, our products are of higher quality and can give you access to the Scripting-and-Programming-Foundations certification that you have always dreamed of.

We have gained high appraisal for the high quality Scripting-and-Programming-Foundations guide question and considerate serves. All content is well approved by experts who are arduous and hardworking to offer help. They eliminate banal knowledge and exam questions out of our Scripting-and-Programming-Foundations real materials and add new and essential parts into them. And they also fully analyzed your needs of Scripting-and-Programming-Foundations exam dumps all the time. Our after sales services are also considerate. If you get any questions with our Scripting-and-Programming-Foundations guide question, all helps are available upon request. Once you place your order this time, you will enjoy and experience comfortable and convenient services immediately. Besides, we do not break promise that once you fail the Scripting-and-Programming-Foundations Exam, we will make up to you and relieve you of any loss. Providing with related documents, and we will give your money back. We have been always trying to figure out how to provide warranty service if customers have questions with our Scripting-and-Programming-Foundations real materials. So all operations are conducted to help you pass the exam with efficiency.

# Trusted Scripting-and-Programming-Foundations Vce Free | Easy To Study and Pass Exam at first attempt & Useful WGU WGU Scripting and Programming Foundations Exam

Nowadays the requirements for jobs are higher than any time in the past. The job-hunters face huge pressure because most jobs require both working abilities and profound major knowledge. Passing Scripting-and-Programming-Foundations exam can help you find the ideal job. If you buy our Scripting-and-Programming-Foundations test prep you will pass the Scripting-and-Programming-Foundations Exam easily and successfully, and you will realize you dream to find an ideal job and earn a high income. Our Scripting-and-Programming-Foundations training braindump is of high quality and the passing rate and the hit rate are both high as more than 98%.

## WGU Scripting and Programming Foundations Exam Sample Questions (Q31-Q36):

NEW QUESTION # 31
A software team has been commissioned to create an animation application. Which event takes place during the analysis phase in the Agile approach?

- A. Sending the application to customers for additional evaluation after new features are added
- B. Deciding to add five new capabilities to the animation application based on customer feedback
- C. Deciding that new capabilities in the animation application will be written as functions without the need for any new objects
- D. Writing the code for five new capabilities

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
In Agile, the analysis phase (often part of sprint planning or backlog refinement) involves gathering and refining requirements, typically as user stories or features, based on stakeholder input. According to foundational programming principles and Agile methodologies (e.g., Certiport Scripting and Programming Foundations Study Guide, Agile Manifesto), the analysis phase focuses on defining what the system should do.
* Agile Analysis Phase:
* Identifies and prioritizes requirements, often incorporating customer feedback.
* Produces user stories or feature lists (e.g., "add new animation effects").
* Option A: "Deciding that new capabilities in the animation application will be written as functions without the need for any new objects." This is incorrect. This decision involves technical design (e.g., choosing procedural vs. object-oriented approaches), which occurs in the design phase, not analysis.
* Option B: "Sending the application to customers for additional evaluation after new features are added." This is incorrect. This occurs during testing or deployment phases (e.g., sprint review or user acceptance testing), not analysis.
* Option C: "Deciding to add five new capabilities to the animation application based on customer feedback." This is correct. In Agile, analysis includes refining the product backlog by adding new features (capabilities) based on customer feedback, such as new animation effects or tools.
* Option D: "Writing the code for five new capabilities." This is incorrect. Writing code occurs during the implementation phase, not analysis.

NEW QUESTION # 32
Which problem is solved by DijkStra's shortest path algorithm?

- A. Given an alphabetized list of face entrants and a person's name, is the person entered in the race?
- B. Given two newspaper articles what is the greatest sequence of words shared by both articles?
- C. Given the coordinates of five positions, what is the most fuel-efficient flight pain?

- D. Given an increasing array of numbers is the number 19 in the array?
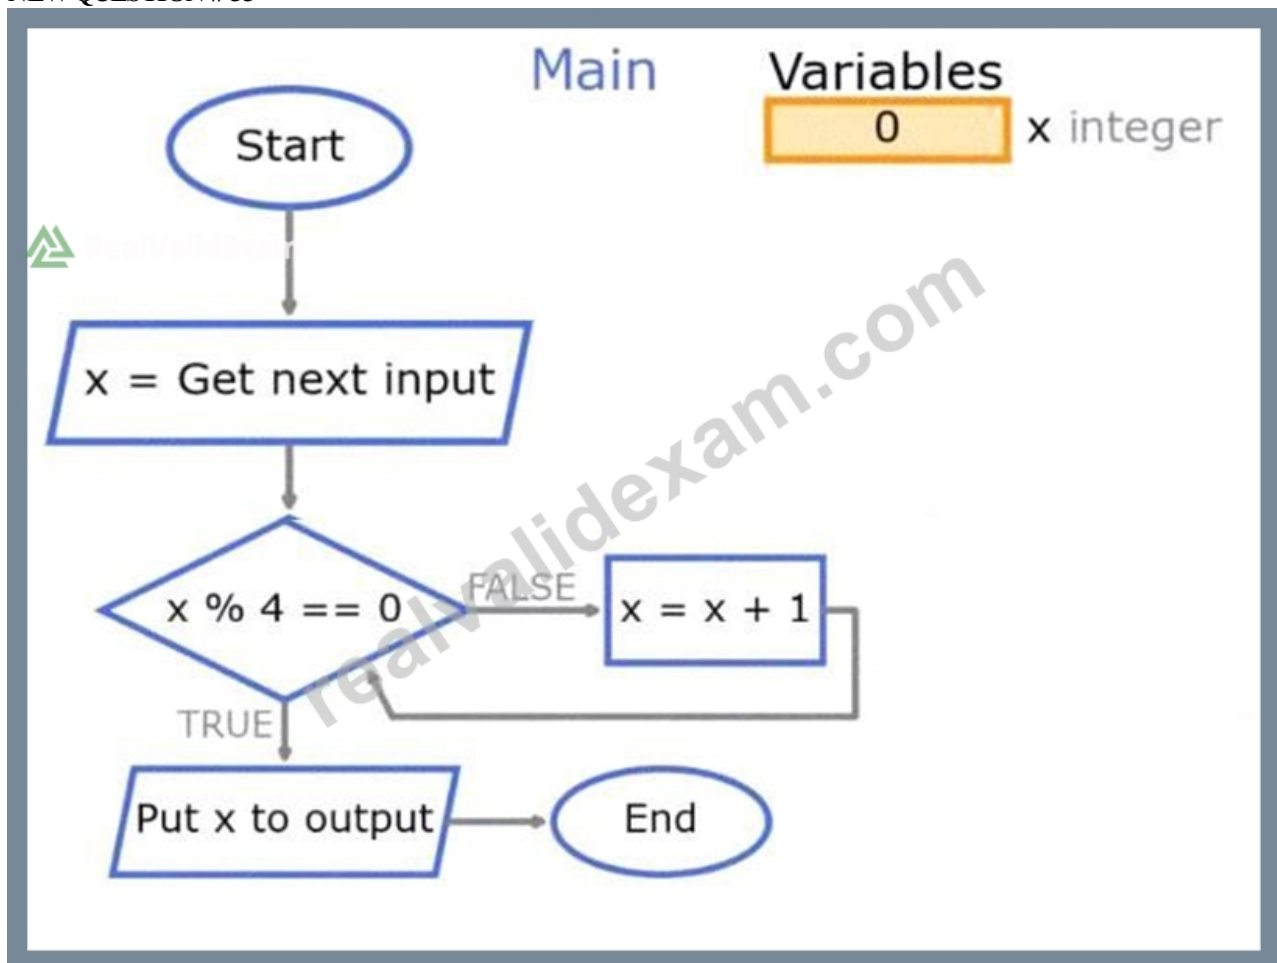

**Answer: C**

Explanation:
Dijkstra's shortest path algorithm is designed to find the shortest path between nodes in a graph. This can be applied to various scenarios, such as routing problems, network optimization, and in this case, determining the most fuel-efficient flight plan. The algorithm works by iteratively selecting the unvisited vertex with the smallest tentative distance from the source, then visiting the neighbors of this vertex and updating their tentative distances if a shorter path is found. This process continues until the destination vertex is reached or all reachable vertices have been visited.
In the context of the given options, Dijkstra's algorithm is best suited for option B, where the goal is to find the most fuel-efficient path (i.e., the shortest path) between multiple points (coordinates of five positions).
The algorithm is not designed to solve problems like searching for an element in an array (option A), finding the longest common subsequence (option C), or searching for a name in a list (option D).

**NEW QUESTION # 33**

What is the output of the given flowchart if the input is 54?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: B**

Explanation:
* Start with the input value (in this case, 54).
* Follow the flowchart's paths and apply the operations as indicated by the symbols and connectors.
* The rectangles represent processes or actions to be taken.
* The diamonds represent decision points where you will need to answer yes or no and follow the corresponding path.

* The parallelograms represent inputs/outputs within the flowchart.
* Use the input value and apply the operations as you move through the flowchart from start to finish.

## NEW QUESTION # 34

A sample function is shown:

```
function F(integer x) returns y
    y = 4 * x
```

What is returned for F (3)?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: B**

Explanation:
Let's evaluate F(3):
* F(3) = (4 * 3) - 8
* F(3) = 12 - 8
* F(3) = 4

## NEW QUESTION # 35

What is an example of an algorithm?

- A. A webpage uses an HTML file type
- B. The list contains apples bananas, and oranges
- C. Unplug the device, wait 30 seconds, and restart the device.
- D. The sign of two integers determines the sign of the product

**Answer: C**

Explanation:
An algorithm is a set of instructions designed to perform a specific task or solve a problem. It is a sequence of steps that are followed to achieve a particular outcome. In the context of the given options, the correct example of an algorithm is option D. This option outlines a series of steps to troubleshoot a device, which is a common algorithmic procedure known as "power cycling" or "resetting." It involves turning off a device, waiting for a short period, and then turning it back on. This process can resolve temporary issues by clearing the device's memory and resetting its state.
Option A is incorrect because it is simply a list of items, not a sequence of steps with a specific goal. Option B is also incorrect as it describes a file type used in web development, not a set of instructions. Option C is a statement about a mathematical property, not an algorithm.
