

350-501인증문제 & 350-501시험덤프샘플

그 외, Pass4Test 350-501 시험 문제집 일부가 지금은 무료입니다: <https://drive.google.com/open?id=1dhk8hBDUpw3seYELyrmvj4hUIpbaM>

우리Pass4Test에는 아주 엘리트 한 전문가들로 구성된 팀입니다 그들은 끈임 없는 연구와 자기자신만의 지식으로 많은 IT관련 덤프자료를 만들어 냈으므로 여러분의 꿈을 이루어드립니다, 기존의 시험문제와 답과 시험문제분석 등 입니다. Pass4Test에서 제공하는Cisco 350-501시험자료의 문제와 답은 실제시험의 문제와 답과 아주 비슷합니다. Pass4Test덤프들은 모두 보장하는 덤프들이며 여러분은 과감히 Pass4Test의 덤프를 장바구니에 넣으세요. Pass4Test에서 여러분의 꿈을 이루어 드립니다.

Cisco 350-501 인증 시험은 다루는 기술에 대한 깊은 이해가 필요한 까다로운 시험입니다. 이 시험은 서비스 제공 업체 네트워크와 함께 일한 경험이있는 전문가를위한 것입니다. 시험은 쉽지 않으며 응시자는 서비스 제공 업체 네트워크 구성 및 문제 해결에 대한 실질적인 경험을 가져야합니다.

Cisco 350-501시험덤프샘플 & 350-501시험패스 인증덤프자료

Pass4Test의 Cisco인증 350-501덤프는 거의 모든 실제시험문제 범위를 커버하고 있습니다.Cisco인증 350-501시험덤프를 구매하여 덤프문제로 시험에서 불합격성적표를 받으시Pass4Test에서는 덤프비용 전액 환불을 약속드립니다.

시스코 350-501 자격증 시험은 시스코 서비스 제공자 네트워크 코어 기술을 구현하고 운영하는 지식과 기술을 증명하고자 하는 전문가를 대상으로 설계되었습니다. 이 시험은 CCNP 서비스 제공자 자격증의 일환이며, 자격증 획득을 위한 요건입니다. 이 시험은 서비스 제공자 환경에서 사용되는 네트워킹 개념, 프로토콜 및 기술에 대한 지식을 시험합니다.

최신 CCNP Service Provider 350-501 무료 샘플문제 (Q533-Q538):

질문 # 533

A remote operation center is deploying a set of I-BGP and E-BGP connections for multiple IOS-XR platforms using the same template. The I-BGP sessions exchange prefixes with no apparent issues, but the E-BGP sessions do not exchange routes. What causes this issue?

- A. The I-BGP neighbors are mistyped and HELLO packets cannot be exchanged successfully between routers.
- B. The E-BGP neighbors are not allowed to exchange information due to the customer platforms default policy.
- C. The next-hop-self command is not implemented on both E-BGP neighbors.
- D. A PASS ALL policy has not been implemented for the I-BGP neighbors.

정답: B

설명:

Routing Policy Enforcement

External BGP (eBGP) neighbors must have an inbound and outbound policy configured. If no policy is configured, no routes are accepted from the neighbor, nor are any routes advertised to it. This added security measure ensures that routes cannot accidentally be accepted or advertised in the case of a configuration omission error.

https://www.cisco.com/c/en/us/td/docs/routers/asr9000/software/asr9k-r6-2/routing/configuration/guide/b-routing-cg-asr9000-62x/b-routing-cg-asr9000-62x_chapter_010.html

질문 # 534

What is the role of NSO in network automation?

- A. It is a tool that uses CLI only to configure virtual network devices.
- B. It is GUI used to manage wireless devices in a campus infrastructure.
- C. It is a tool used to bridge automation to the physical network infrastructure.
- D. It is a type of REST API used to configure an APIC.

정답: C

설명:

Cisco Network Services Orchestrator (NSO) acts as a bridge between application or service owners and infrastructure owners, allowing each team to operate in their native environment while still collaborating effectively together. It simplifies service delivery and management by bridging the gap between applications and network devices

<https://www.cisco.com/c/en/us/products/collateral/cloud-systems-management/network-services-orchestrator/datasheet-c78-734576.html>

NSO provides a robust bridge linking network automation and orchestration tools with the underlying physical and virtual infrastructure.

질문 # 535

Egress PE NAT is being used via a single centralized router to provide Internet access to L3VPN customers. Which description of the NAT operation is true?

- A. The NAT table contains a field to identify the inside VRF of a translation
- B. The different L3VPNs using the Internet access must not have IP overlaps internally
- C. Users in different VRFs cannot share the same outside global IP address
- D. Multiple address pools are needed for the same L3VPN because each site has a separate NAT

정답: A

설명:

Egress PE NAT via a single centralized router allows L3VPN customers to access the internet. The NAT operation maintains a table that includes a field to identify the inside VRF of a translation. This is crucial for distinguishing between different customer VPNs that may use overlapping IP address spaces. By having this field, the NAT process can correctly associate each internal IP with its respective VRF and outside global IP address. Reference: Centralized egress to internet, Egress PE NAT single centralized router.

질문 # 536

Refer to the exhibit.

Refer to the exhibit. The ISP is implementing a new hosting-as-a-service solution for its business customers. Service accessibility must be unique and separate for each customer. The network architect must ensure that multiple paths toward the hosting-as-a-service solution are always available. Basic protection against traffic black-holing on the MPLS network is required in case of link failure. Which two actions must the engineering team perform to meet the requirements? (Choose two.)

- A. Configure the `mpls ldp sync` command in the MPLS network with the BGP `additional-paths receive` and `additional-paths send` options.
- B. Create the hosting-as-a-service VRF on router R4 and configure it with the `route target both 65123:88` command.
- C. Configure the `fast-reroute per-prefix` command for the IS-IS protocol in the MPLS network and enable the BGP `route-reflector` feature on R2.
- D. Enable the VRF-Lite feature on router R4 and enable BGP address-family `VPNv4`.
- E. Configure the `fast-hello` command under the IS-IS routing protocol with the BGP `multipath 2` option enabled.

정답: A,C

설명:

To ensure multiple paths toward the hosting-as-a-service solution and basic protection against traffic black-holing in case of link failure, the engineering team should:

B) Configure the `fast-reroute per-prefix` command for the IS-IS protocol in the MPLS network. This action enables fast reroute, which is a mechanism to quickly switch over to a backup path in case the primary path fails, without waiting for the routing protocol to converge.

D) Configure the `mpls ldp sync` command in the MPLS network with the BGP `additional-paths receive` and `additional-paths send` options. MPLS LDP (Label Distribution Protocol) synchronization ensures that a label-switched path (LSP) is not used for forwarding traffic until all routers along the path have signaled that they have label information for that LSP. The BGP `additional-paths` feature allows for the advertisement of multiple paths for the same prefix, providing path diversity and redundancy.

질문 # 537

Refer to the exhibit.

```
snmp-server community ciscotest ro 2
```

What does the number 2 mean in the configuration?

- A. It dictates the number of sessions that will be open with the SNMP manager
- B. It represents the version of SNMP running
- C. It is the numeric name of the ACL that contains the list of SNMP managers with access to the agent.
- D. It indicates two SNMP managers are able to read and write with the agent using community string ciscotest.

정답: C
