New CTFL-UT Test Voucher | Exam CTFL-UT Questions

Ready to take the next level in your ISQI career? Pass the ISTQB Certified Tester-Foundation Level - Usability Testing (CTFL-UT) exam with our updated CTFL-UT exam dumps. Too often, candidates struggle to find credible study materials and end up

wasting resources on outdated material. But with our platform, you can access real ISQI CTFL-UT Practice Questions in three formats - PDF, web-based practice exams, and desktop practice test software. Whether you prefer to study on your smart device or offline on your computer, we have the tools you need to succeed.

ISQI CTFL-UT: ISTQB Certified Tester-Foundation Level - Usability Testing Exam is an excellent opportunity for professionals who want to enhance their knowledge and skills in usability testing. CTFL-UT Exam covers various aspects of usability testing, and the certification is recognized globally, making it a valuable asset for professionals in the software development industry.

ISQI ISTQB Certified Tester-Foundation Level - Usability Testing Sample Questions (Q19-Q24):

NEW QUESTION # 19

You're asked to evaluate the direct interaction between ordinary users and the software product. Which kinds of evaluations would be suited for that?

- A. Risk assessment
- B. Accessibility evaluation
- C. Usability maturity assessment
- **D. Usability evaluation**

Answer: D

Explanation:

A usability evaluation is specifically designed to assess how real users interact with a software product. It focuses on effectiveness, efficiency, and user satisfaction in completing tasks. This may involve usability testing, expert reviews, or heuristic evaluations. The goal is to identify any usability problems and understand user behavior during real use.

Option A (Accessibility evaluation) targets inclusivity for users with disabilities, not general user interaction.

Option B (Usability maturity assessment) evaluates the organization's usability practices, and Option C (Risk assessment) evaluates potential project or system risks. Only option D directly involves observing and measuring user interaction.

NEW QUESTION # 20

How can the approach for conducting user surveys be summarized best?

- A. Write survey plan, write schedule, select questionnaire, recruit users, analyze, communicate
- B. Write survey plan, interview users and stakeholders, select questionnaire, recruit users, remind users, communicate
- C. Write survey plan, write schedule, select questionnaire, recruit users, remind users, communicate
- **D. Write survey plan, interview users and stakeholders, select questionnaire, deploy questionnaire, analyze, communicate**

Answer: D

Explanation:

Conducting user surveys involves a structured approach that ensures data collection is effective, reliable, and meaningful. The process typically starts with writing a survey plan, which defines the objectives, scope, target population, and methodology. Next, interviewing users and stakeholders is important to gather qualitative insights, refine survey questions, and align the survey with business goals and user needs.

Selecting or designing the questionnaire follows, which includes crafting clear, unbiased questions to capture the desired data. After that, deploying the questionnaire to the recruited participants is essential; this can be done via email, online tools, or in-person, depending on the context. Once the data is collected, it must be analyzed to extract meaningful patterns, trends, and insights. Finally, communicating the findings to stakeholders completes the process by informing decision-making.

Other options miss critical steps such as deploying the questionnaire (Option C), or combine steps incorrectly (Options A and D). Importantly, the step of interviewing users and stakeholders prior to deployment ensures the survey is well-informed and targeted, enhancing the quality and relevance of data collected.

NEW QUESTION # 21

What location is NOT suitable for conducting a usability test?

- A. A room at the place where the test participant lives or works.
- B. A public place, such as a cafe.
- **C. A room where no action of the user can be seen or recorded by any means.**
- D. Two office rooms that are connected by a video link.

Answer: C

Explanation:

The primary goal of usability testing is to observe and record user behavior while interacting with the system.

A location where user actions cannot be seen or recorded (option A) completely undermines the test's purpose and is therefore not suitable.

While options B, C, and D are not ideal in all cases, they can still be valid settings depending on the context.

Testing in a user's natural environment (B) increases ecological validity. Remote testing via video link (C) is widely accepted. Testing in a public setting (D) can be useful for mobile apps or services intended for real- world use.

NEW QUESTION # 22

Which of the following statements about usability testing is true?

- A. A usability test consists of one usability test session
- B. The conditions under which a usability test is done are irrelevant
- C. The preparation of a usability test is optional
- **D. Before the usability test sessions, a pilot usability test session can be conducted**

Answer: D

Explanation:

A pilot usability test session is a critical step prior to conducting the actual usability test. Its purpose is to ensure that the test setup, task design, and moderator instructions are clear and function as expected.

According to ISO 9241-210 and the Nielsen Norman Group's best practices, pilot testing helps detect unforeseen issues and fine-tune the process. Options A and B are incorrect because testing conditions must reflect realistic scenarios, and thorough preparation is essential to gather meaningful usability data. Option D is also incorrect; a usability test typically consists of multiple sessions with different users to gather sufficient data for analysis. The pilot session ensures everything works smoothly before involving real participants.

#####

NEW QUESTION # 23

In the last project, the usability tests substantially exceeded the budget of the test plan. Which quality control task could have been used to avoid this?

- A. Check whether the usability test report conforms to the best practices
- B. Check that findings are communicated to the stakeholders
- **C. Check consumed resources regularly and compare with the estimates**
- D. Check that the usability test plan has been properly reviewed

Answer: C

Explanation:

To prevent usability testing from exceeding budget, active monitoring and control of project resources are critical. The best practice is to regularly check consumed time, costs, and effort against the original estimates, allowing timely adjustments to scope or resources. This is a classic quality control practice aligned with ISO 9001 principles and standard project management methodologies. Option A relates to test preparation, option C concerns reporting and communication, and option D applies after test execution. Only option B deals directly with budget control during the test.
