## Valid PDII Test Sims, Exam PDII Topic

Once we have bought a practice materials, we may worry about that the version we bought cannot meet the need for the exam, so that we cannot know the latest information for the exam, if you worry about the questions like this and intend to join the PDII exam, just select the product of our company, because our products offer 365 days free update, it can help you to know about the latest information of the PDII Exam, so that you can change your strategies for the exam, besides downloading link of the update version will be sent to your email automatically by our systems. Using this, you can prepare for your test with ease.

## Salesforce Platform Developer II Sample Questions (Q84-Q89):

### NEW QUESTION # 84

A developer created 2 class that implements the Queueable Interface, as follows:

```

public class without sharing OrderQueueableJob implements Queueable {
    public void execute(QueueableContext context) {
        // implementation logic
        System.enqueueJob(new FollowUpJob());
    }
}

```

As part of the deployment process, the developer is asked to create a corresponding test class. Which two actions should the developer take to successfully execute the test class? Choose 2 answers

- A. Implement Test.isRunningTest() to prevent chaining jobs during test execution.
- B. Implement seeAllData=True to ensure the Queueable job is able to run in bulk mode.
- C. Ensure the running user of the test class has, at I the View All permission on the Order object.
- D. Enclose System.enqueueJob(new OrderQueueableJob ()) within Tess. and Test .stopTest (1.

**Answer: A,D**

Explanation:

When writing a test class for a Queueable class in Salesforce, the goal is to ensure that the asynchronous code is executed within the test context and that it does not affect the state of the production org or depend on its data.

\* Option C is correct because using Test.startTest() and Test.stopTest() ensures that the asynchronous code is executed immediately within the test's context. This is essential for testing Queueable classes because it allows the test to wait for the asynchronous process to complete before assertions are made.

Without this, the asynchronous job would not necessarily run during the test execution.

\* Option D is correct because Test.isRunningTest() can be used within the Queueable class to prevent the chaining of jobs during test execution. Chaining queueable jobs can lead to governor limits being hit and is generally not allowed in test methods. This conditional check allows the developer to bypass sections of the code not suitable for a testing context.

\* Option A is incorrect because the seeAllData=True annotation is not required for testing Queueable classes, and it is not a best practice to depend on live data for tests. It's preferable to create test data within the test class itself.

\* Option B is incorrect because having the 'View All' permission on the Order object is not related to the successful execution of the Queueable class in tests. Permissions are typically not enforced in test contexts unless using System.runAs() to test with a specific user context.

#### NEW QUESTION # 85

How should a developer verify that a specific Account record is being tested in a test class for a Visualforce controller?

- A. Insert the Account into Salesforce, instantiate the page reference in the test class, then use system.setFarentRecordId().get() to set the Account ID.  
{of Instantiate the page reference in the test class, insert the Account in the test class, then use =seeAllData=trus to view the Account.
- B. Instantiate the page reference in the test class, insert the Account in the test class, then use system.setFarentRecordrd().get() to set the Account ID,
- C. Insert the Account in the test class, instantiate the page reference in the test class, then use System.currentFageReference().getFarameters() .put;) to set the Account ID.

**Answer: C**

#### NEW QUESTION # 86

Universal Containers (UC) has enabled the translation workbench and has translated picklist values. UC has a custom multi-select picklist field, Product\_\_c, on the Account object that allows sales reps to specify which of UC's products an Account already has. A developer is tasked with writing an Apex method that retrieves Account records, including the Product\_\_c field.

What should the developer do to ensure the value of Products\_\_c is in the current user's language?

- A. Set the locale on each record in the SOQL result list.

- B. Use the Locale clause in the SOQL query.
- C. Call the translate method on each record in the SOQL result list.
- D. Use toLabel method in the fields list of the SOQL query.

**Answer: D**

Explanation:

Using toLabel() in the SOQL query ensures that picklist values are returned in the user's language, which is necessary for organizations that have the translation workbench enabled.

### NEW QUESTION # 87

A developer is asked to create a Lightning web component that will be invoked via button on a record page.

The component must be displayed in a modal dialog.

Which three steps should the developer take to achieve this?

Choose 3 answers

- A. In target, add lightning\_RecordAction as a target.
- B. Set action Type to screenAction.
- C. Add a targetConfig and set targets to lightning\_RecordAction.
- D. In targetConfigs, add Lightning\_Apppage as a target.
- E. Set eventType to action.

**Answer: A,B,C**

### NEW QUESTION # 88

A company represents their customers as Accounts in Salesforce. All customers have a unique Customer\_Number\_\_c that is unique across all of the company's systems. They also have a custom Invoice\_\_c object, with a Lookup to Account, to represent invoices that are sent out from their external system. This company wants to integrate invoice data back into Salesforce so Sales Reps can see when a customer is paying their bills on time.

What is the optimal way to implement this?

- A. Query the Account Object upon each call to insert invoice data to fetch the Salesforce ID corresponding to the Customer Number on the invoice.
- B. Use Salesforce Connect and external data objects to seamlessly import the invoice data into Salesforce without custom code.
- C. Ensure Customer\_Number\_\_c is an External ID and that a custom field Invoice\_Number\_\_c is an External ID and Upsert invoice data nightly.
- D. Create a cross-reference table in the custom invoicing system with the Salesforce Account ID of each Customer and insert invoice data nightly.

**Answer: C**
