And our LEED-Green-Associate exam questions will help you pass the LEED-Green-Associate exam for sure.

USGBC LEED Green Associate Exam Sample Questions (Q218-Q223):

NEW QUESTION # 218

Unless mitigated, resource consumption over the life of a conventional building

- A. fluctuates between increasing and decreasing the total emissions footprint
- B. gradually decreases the total emissions footprint
- C. incrementally increases the total emissions footprint
- D. remains steady

Answer: C

Explanation:

Explanation

Unless mitigated, resource consumption over the life of a conventional building incrementally increases the total emissions footprint. This is because conventional buildings often use non-renewable resources for energy and materials, which contribute to greenhouse gas emissions during extraction, production, use, and disposal. References: LEED Green Associate Candidate Handbook, U.S. Green Building Council resources

NEW QUESTION # 219

The project area defined by the perimeter of a building plan is referred to as the building's

- A. shell
- B. envelope
- C. footprint
- D. density

Answer: C

NEW QUESTION # 220

An office without transit access can substantially reduce its transportation impact if

- A. the office is located at a major intersection
- B. workers are able to walk from the office to basic services
- C. ample parking spaces are provided
- D. green power is purchased to offset projected automobile travel

Answer: B

Explanation:

Explanation

An office without transit access can substantially reduce its transportation impact if workers are able to walk from the office to basic services. Transportation impact is the effect of transportation activities on the environment, society, and economy. Transportation impact can include greenhouse gas emissions, air pollution, noise pollution, energy consumption, land use, traffic congestion, infrastructure costs, and public health. Walking is a form of alternative transportation that can reduce transportation impact by using less energy, emitting less pollutants, occupying less space, and improving physical activity and well-being. If workers are able to walk from the office to basic services, such as retail, restaurants, banks, or post offices, they can reduce their vehicle miles traveled, fuel consumption, and parking demand. References: LEED v4 Green Associate Candidate Handbook, EPA's Transportation and Climate Change

NEW QUESTION # 221

Which of the following is a minimum program requirement for LEED@ for New Construction and Major Renovations projects?

- A. Comply with maximum ventilation rate requirements
- **B. Be a permanent building or space on existing land**
- C. Commit to sharing data for water usage only
- D. Comply with maximum floor area requirements

Answer: B

Explanation:

Explanation

A minimum program requirement for LEED for New Construction and Major Renovations projects is to be a permanent building or space on existing land. This means that the project must be designed and constructed for a fixed location on land that is legally defined and has legal boundaries. The project cannot be a temporary structure, such as a trailer or a tent, or a movable structure, such as a boat or a vehicle. The LEED Green Associate Candidate Handbook states that this is one of the four minimum program requirements that apply to all LEED rating systems [1, p. 9]. References: LEED Green Associate Candidate Handbook, [Minimum Program Requirements | U.S. Green Building Council]

NEW QUESTION # 222

According to a study completed by the Heschong Mahone Group, which of the following Indoor Environmental Quality strategies can improve student test scores in schools by 7%-18%?

- A. Using thermal comfort controls
- B. Installing ergonomic furniture
- C. Putting plants in the classroom
- **D. Providing increased daylighting**

Answer: D

Explanation:

According to a study completed by the Heschong Mahone Group, providing increased daylighting in schools can improve student test scores by 7%-18%. Daylighting is the practice of placing windows, skylights, other openings, and reflective surfaces so that sunlight (direct or indirect) can provide effective internal lighting.

Particular attention is given to daylighting while designing a building when the aim is to maximize visual comfort or to reduce energy use. References: LEED Green Associate Candidate Handbook, U.S. Green Building Council resources

NEW QUESTION # 223

.....

Nowadays in this talented society LEED-Green-Associate professionals are very popular, but the IUSGBC area are also very competitive.
