Valid WGU Web Development Applications Web-Development-Applications test dumps demo and latest test preparation for customer's success. WGU offers latest WGU Web Development Applications exam and valid practice questions book to help you pass the WGU Web Development Applications Web-Development-Applications Exam in your field. The WGU Web Development Applications exam is 365 days updates and true. New Web-Development-Applications study questions pdf in less time. And WGU Web Development Applications Web-Development-Applications price is benefit!

Maybe you have set a series of to-do list, but it's hard to put into practice for there are always unexpected changes during the Web-Development-Applications exam. Here we recommend our Web-Development-Applications test prep to you. With innovative science and technology, our study materials have grown into a powerful and favorable product that brings great benefits to all customers. We are committed to designing a kind of scientific study material to balance your business and study schedule. With our Web-Development-Applications Exam Guide, all your learning process includes 20-30 hours.

## Pass Guaranteed Quiz 2026 WGU High-quality Exam Web-Development-Applications Fees

Through SureTorrent you can get the latest WGU certification Web-Development-Applications exam practice questions and answers. Please purchase it earlier, it can help you pass your first time to participate in the WGU Certification Web-Development-Applications Exam. Currently, SureTorrent uniquely has the latest WGU certification Web-Development-Applications exam exam practice questions and answers.

## WGU Web-Development-Applications Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Responsive Web Design (RWD) for Browsers and Apps: This section of the exam measures skills of Front-End Designers and covers concepts related to mobile-first layout planning, responsive frameworks, and techniques used to ensure compatibility with modern browsers and applications. Candidates must demonstrate how to adjust elements for better usability on mobile devices and apply responsive strategies that allow a single design to function seamlessly across various environments.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>• <b>Validation, Testing, and Form Development:</b> This section of the exam measures skills of Web Developers and covers the ability to validate code, test web pages for accuracy, and build form components. It includes understanding how to detect errors, ensure compliance with standards, and implement form fields with inline validation to improve user experience. The focus is on creating forms that work reliably, meet usability expectations, and maintain proper data entry flow.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Creating Adaptive Web Documents and Pages:</b> This section of the exam measures skills of Front-End Designers and covers the techniques needed to make websites display correctly across traditional desktops and mobile devices. It emphasizes adaptive page layout, flexible formatting, and user-friendly presentation so that content remains readable and functional on screens of different sizes. Candidates are expected to show an understanding of how to create consistent designs that respond smoothly to device changes.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>HTML5, CSS3, and JavaScript Foundations:</b> This section of the exam measures skills of Web Developers and covers the essential ability to manually code using HTML5, CSS3, and JavaScript to create structured, visually styled, and interactive web content. It focuses on building accurate page layouts, applying modern styling rules, and writing basic scripts that support user interaction. The aim is to ensure candidates can construct professional web documents using current standards and properly integrate all three technologies.</li> </ul>

## WGU Web Development Applications Sample Questions (Q71-Q76):

### NEW QUESTION # 71

Which HTML tag should a developer use to create a drop-down list?

- A. <Section>
- B. <Output>
- C. <Select>
- D. <Option>

**Answer: C**

Explanation:

The <select> tag is used in HTML to create a drop-down list. It is used in conjunction with the <option> tags to define the list items within the drop-down menu.

\* Purpose of <select>: The <select> element is used to create a control that provides a menu of options.

The user can select one or more options from the list.

\* Structure of Drop-down List:

\* The <select> element encloses the <option> elements.

\* Each <option> element represents an individual item in the drop-down list.

\* Usage Example:

```
<label for="cars">Choose a car:</label>
<select id="cars" name="cars">
  <option value="volvo">Volvo</option>
  <option value="saab">Saab</option>
  <option value="fiat">Fiat</option>
  <option value="audi">Audi</option>
</select>
```

In this example, the <select> tag creates a drop-down list with four options: Volvo, Saab, Fiat, and Audi.

\* Attributes of <select>:

\* name: Specifies the name of the control, which is submitted with the form data.

\* id: Used to associate the <select> element with a label using the <label> tag's for attribute.

\* multiple: Allows multiple selections if set.

MDN Web Docs on <select>

W3C HTML Specification on Forms

### NEW QUESTION # 72

Which method retrieves periodic updates about the geographic location of a user:

- A. WatchPosition
- B. GetContext
- C. getCurrentPosition
- D. ClearWatch

**Answer: A**

Explanation:

The watchPosition method in the Geolocation API is used to get periodic updates about the geographic location of a user.

\* watchPosition Method: This method calls the provided callback function with the user's current position as the device's location changes.

\* Usage Example:

```
navigator.geolocation.watchPosition(function(position) {  
  console.log("Latitude: " + position.coords.latitude + ", Longitude: " + position.coords.longitude);  
});
```

In this example, the watchPosition method continuously logs the user's latitude and longitude to the console as the position changes.

References:

\* MDN Web Docs on watchPosition

\* W3C Geolocation API Specification

### NEW QUESTION # 73

Given the following JavaScript code:

```
```\javascript  
<script>  
var enabled = true;  
</script>  
```\
```

Which code segment tests the variable value and displays an alert message?

- A. 

```
```\javascript  
if(enabled {  
  alert('ok');  
}  
```\
```
- B. 

```
```\javascript  
if(enabled == true){  
  alert('ok');  
}  
```\
```
- C. 

```
```\javascript  
if(enabled){  
  alert('ok');  
}  
```\
```
- D. 

```
```\javascript  
if(enabled == true {  
  alert('ok');  
}  
```\
```

**Answer: C**

Explanation:

> "The 'if' statement in JavaScript requires parentheses around the condition. 'if(enabled)' is a valid boolean condition and checks whether the variable 'enabled' is truthy."

>

> "Using 'if(enabled == true)' is redundant. The concise form 'if(enabled)' is preferred." Correct Syntax:

```
if(enabled) {  
    alert('ok');  
}  
...
```

## NEW QUESTION # 74

Which feature was introduced in HTML5?

- **A. Native drag-and-drop capability**
- B. Addition of CSS in the HTML file
- C. Ability to hyperlink to multiple web pages
- D. Adherence to strict XML syntax rules

**Answer: A**

Explanation:

HTML5 introduced several new features that enhanced web development capabilities significantly. One of the notable features is the native drag-and-drop capability.

\* Native Drag-and-Drop Capability:

\* Description: HTML5 allows developers to create drag-and-drop interfaces natively using the draggable attribute and the DragEvent interface. This means elements can be dragged and dropped within a web page without requiring external JavaScript libraries.

\* Implementation:

\* Making an Element Draggable: To make an element draggable, you set the draggable attribute to true:

```
<div id="drag1" draggable="true">Drag me!</div>
```

\* Handling Drag Events: You use event listeners for drag events such as dragstart, dragover, and drop:

```
document.getElementById("drag1").addEventListener("dragstart", function(event) { event.dataTransfer.setData("text",  
event.target.id);
```

```
});
```

```
document.getElementById("dropzone").addEventListener("dragover", function(event) { event.preventDefault();
```

```
});
```

```
document.getElementById("dropzone").addEventListener("drop", function(event) { event.preventDefault(); var data =  
event.dataTransfer.getData("text"); event.target.appendChild(document.getElementById(data));
```

```
});
```

\* Example: This example demonstrates a simple drag-and-drop operation:

html

Copy code

```
<div id="drag1" draggable="true">Drag me!</div>
```

```
<div id="dropzone" style="width: 200px; height: 200px; border: 1px solid black;">Drop here</div>
```

\* References:

- \* W3C HTML5 Specification - Drag and Drop
- \* MDN Web Docs - HTML Drag and Drop API
- \* HTML5 Doctor - Drag and Drop

HTML5's native drag-and-drop feature streamlines the process of creating interactive web applications by eliminating the need for third-party libraries, thus making it a powerful addition to the HTML standard.

## NEW QUESTION # 75

Which method should a developer use to create a message that requests a user to select "OK" or "Cancel"?

- A. prompt
- B. write
- C. alert

- **D. confirm**

**Answer: D**

Explanation:

> "The `confirm()` method displays a dialog box with OK and Cancel buttons. It returns `true` if OK is selected and `false` otherwise."

>

> \* `alert()` only shows a message

> \* `prompt()` includes a text input field

> \* `write()` outputs directly to the document

References:

\* MDN Web Docs: `confirm()`

\* ECMAScript Browser Dialogs
