The up-to-date VMware 2V0-11.25 exam answers will save you from wasting much time and energy in the exam preparation. The content of our VMware 2V0-11.25 Dumps Torrent covers the key points of exam, which will improve your ability to solve the difficulties of VMware 2V0-11.25 real questions.

For VMware 2V0-11.25 exam applicants who don't always have access to the internet, desktop-based practice exam software is appropriate. This VMware 2V0-11.25 practice test software is compatible with Windows computers. Much like the web-based practice exam, our desktop practice test simulates the actual test. This VMware Cloud Foundation 5.2 Administrator (2V0-11.25) exam simulation software has the same features as our web-based practice exam, including most probable real exam questions, customizable practice test sessions, and quick result on how you did. To eliminate mistakes and exam anxiety, we advise using this VMware 2V0-11.25 practice test software.

## Test 2V0-11.25 Dumps Pdf & 2V0-11.25 Valid Study Plan

Research has found that stimulating interest in learning may be the best solution. Therefore, the 2V0-11.25 prepare guide' focus is to reform the rigid and useless memory mode by changing the way in which the 2V0-11.25 exams are prepared. Our Soft version of 2V0-11.25 practice materials combine knowledge with the latest technology to greatly stimulate your learning power. By simulating

enjoyable learning scenes and vivid explanations, users will have greater confidence in passing the qualifying 2V0-11.25 exams.

## VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network</li><li>storage design.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.</li></ul>

## VMware Cloud Foundation 5.2 Administrator Sample Questions (Q57-Q62):

### NEW QUESTION # 57

An administrator is tasked with performing password rotation for VMware Cloud Foundation components managed by SDDC Manager.

Which action must be taken to complete this task?

- A. Schedule a maintenance window to rotate the passwords to minimize disruption.
- B. Access the SDDC Manager UI and navigate to the password management section.**
- C. Use the Async Patch CLI Tool to rotate passwords for all components.
- D. Manually update the passwords in vCenter Server and NSX Manager.

**Answer: B**

Explanation:

Password rotation for VMware Cloud Foundation components is managed via the SDDC Manager UI. In the password management section of the SDDC Manager, administrators can rotate the passwords for various components like vCenter Server, NSX Manager, and other management components.

### NEW QUESTION # 58

What is the impact of consolidating snapshots on a virtual machine?

- A. It temporarily increases the available disk space consumption on the datastore while merging data.
- B. It changes the VM's hardware compatibility settings.
- C. It reverts the VM to the state of the first snapshot taken.
- D. It disconnects the VM from the network temporarily.

**Answer: A**

Explanation:

When consolidating snapshots, the data from the snapshot files is merged back into the original virtual disk.

This process temporarily increases the disk space usage on the datastore because of the additional space required to merge the snapshot data into the primary disk.

### NEW QUESTION # 59

Which two operations can be completed in the SDDC Manager UI on an NSX Edge cluster after it has been deployed into a workload domain? (Choose two.)

- A. Redeploy
- B. Shrink
- C. Delete
- D. Sync
- E. Expand

**Answer: B,E**

Explanation:

After an NSX Edge cluster is deployed into a workload domain, SDDC Manager provides built-in operations to adjust the cluster size. According to the VMware Cloud Foundation 5.2 documentation:

"After you create an NSX Edge cluster, you can use SDDC Manager to expand or shrink it by adding or deleting NSX Edge nodes."

Breakdown of options:

B). Expand- You can add one or more Edge nodes to increase the cluster size.

E). Shrink- You can remove Edge nodes to decrease the cluster size.

These two actions are the only supported cluster scaling operations available in SDDC Manager post-deployment. Other operations-such as Redeploy, Sync, or Delete-are not available via the UI for a deployed Edge cluster and are either manual or unsupported in that context.

Summary:

Selected choices Band Ematch the documented capability to scale an NSX Edge cluster via SDDC Manager.

No other operations (A, C, D) are supported for an existing Edge cluster through the UI.

### NEW QUESTION # 60

An administrator has been tasked with updating the version of VMware Tools on virtual machines that have been migrated into a VMware Cloud Foundation (VCF) instance so that they are compliant with the company's security policies. The following information is shared with the administrator about this task:

The VMs have been migrated from environments running earlier releases of vSphere.

The VMs are spread across multiple clusters within a single workload domain in the VCF instance.

The upgrade must not initiate a reboot of the VMs to avoid downtime to the business.

Which three steps should the administrator perform in order to complete this task? (Choose three.)

- A. Select the cluster hosting the VMs to upgrade.
- B. Select the VI workload domain so that all VMs across all clusters are automatically selected.
- C. Select the Set Auto Update option and set its value to On.
- D. Use SDDC Manager in the management domain to initiate the upgrade.
- E. Select the Upgrade to Match Host option.
- F. Use vSphere Lifecycle Manager in the VI workload domain vCenter to initiate the upgrade.

**Answer: C,E,F**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

As defined in the VMware Cloud Foundation Administration Guide and vSphere Lifecycle Manager official documentation, the correct way to upgrade VMware Tools at scale across multiple clusters and without initiating a VM reboot is as follows:

B . Use vSphere Lifecycle Manager in the VI workload domain vCenter to initiate the upgrade.

The official guidance is to use vSphere Lifecycle Manager (vLCM) for managing VMware Tools versions across VMs. This tool allows you to select multiple clusters or the entire workload domain and execute VMware Tools upgrades centrally.

D . Select the Upgrade to Match Host option.

The "Upgrade to Match Host" setting in vSphere Lifecycle Manager is specifically designed to align the VMware Tools version in the guest with the version included with the ESXi host, and can be applied without a forced VM reboot. The upgrade will complete the next time VMware Tools starts or during the next guest OS reboot or shutdown initiated by the user or other processes.

F . Select the Set Auto Update option and set its value to On.

The "Auto Update" option for VMware Tools, when set to On, allows VMware Tools to automatically update to the latest version whenever the VM is powered on or rebooted, without requiring the administrator to intervene or force a downtime event.

Why Not the Other Options?

A . Selecting the VI workload domain alone does not guarantee a compliant upgrade process; the upgrade must be triggered via Lifecycle Manager with the proper options set.

C . Selecting a single cluster would not meet the requirement for VMs spread across multiple clusters.

E . SDDC Manager does not manage or trigger VMware Tools upgrades at the VM level.

Summary:

To upgrade VMware Tools on all relevant VMs in a VCF workload domain, and to do so without forced reboots, the administrator should:

Use vSphere Lifecycle Manager in the VI workload domain vCenter (B),

Select the Upgrade to Match Host option (D),

And enable Auto Update for VMware Tools (F).

This method is fully supported by official VMware best practices and documentation.

## NEW QUESTION # 61

Which prerequisite task must be completed before deploying VMware Cloud Foundation (VCF) using VMware Cloud Builder?

- **A. Verify network configurations and DNS settings for all components.**
- B. Verify configurations on Virtual Distributed Switch on the ESXi hosts that will be used for the deployment.
- C. Ensure HCX is configured for workload migration.
- D. Ensure that all ESXi hosts are connected to a single vCenter Server.

**Answer: A**

Explanation:

Before using Cloud Builder, you must validate network connectivity and DNS name resolution for all management components to ensure the deployment can register and communicate correctly.

## NEW QUESTION # 62

.....

As a hot test of VMware certification, 2V0-11.25 practice exam become a difficult task for most candidates. So choosing right study materials is a guarantee success. Our website will be first time to provide you the latest 2V0-11.25 Exam Braindumps and test answers to let you be fully prepared to pass 2V0-11.25 actual test with 100% guaranteed.
