SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q27-Q32):

NEW QUESTION # 27
What defines the organizational entities that are required in SAP Central Business Configuration?
Note:
There are 2 correct answers to this question

- A. The selected deployment target
- B. The selected scope
- C. Added partner content
- D. System consistency checks

Answer: A,B

Explanation:
The organizational entities that are required in SAP Central Business Configuration are defined by the selected deployment target and the selected scope. The deployment target specifies which SAP cloud solutions are included in the project, such as SAP S/4HANA Cloud, public edition. The scope specifies which business processes and countries/regions are included in the project, such as sales or professional services.
These choices determine which organizational units are required to run the underlying processes, such as company, business residence, sales organization, or project unit. Added partner content and system consistency checks do not define the organizational entities, but rather enhance or validate the configuration. References = SAP Central Business Configuration - Overview, page 5; Introducing SAP Central Business Configuration In SAP Central Business Configuration, the organizational entities that need to be defined for an SAP S
/4HANA Cloud Public Edition implementation are influenced by two primary factors: the selected deployment target and the selected scope. The deployment target refers to the specific environment or system where SAP S/4HANA Cloud will be implemented. This choice can affect which organizational entities are necessary based on the technical and business requirements of that environment. The selected scope, on the other hand, pertains to the business processes and functions that the company intends to use within SAP S
/4HANA Cloud. This determines the organizational structures, such as company codes, sales organizations, and purchasing

organizations, that need to be set up to support the scoped processes. Both factors are integral to ensuring that the configuration supports the business's operational needs and strategic objectives.

NEW QUESTION # 28
Where is the initial list of known integrations documented?

- A. In SAP Cloud ALM
- B. In the Business Driven Configuration Questionnaire
- C. In the Digital Discovery Assessment
- D. In the Fit-to-Standard Workkshops

Answer: C

NEW QUESTION # 29
You have assigned a business role to an end user who has been granted access to only one specific application. While you have a day off, it turns out that the app doesn't show up on the user's launchpad. What can the user do?

- A. Assign a launchpad space to the business role.
- B. Use the search function to find the app.
- C. Create a page and assign it to the launchpad space.
- D. Assign a different business role that provides access.

Answer: B

Explanation:
When an end user has been assigned a business role that grants access to only one specific application, and the app does not appear on the user's SAP Fiori Launchpad, the recommended action for the user is:
* Use the search function to find the app: The search function on the SAP Fiori Launchpad allows users to locate applications by their name or related keywords. Even if the app is not immediately visible on the launchpad due to configuration issues or other reasons, using the search function can help the user access the app directly. This is a quick and effective way for users to access necessary applications when they encounter visibility issues on their launchpad.

NEW QUESTION # 30
What do you use to collect the values that are entered into the configuration activities in SAP Central Business Configuration?

- A. Business Driven Configuration Questionnaire
- B. Availability and Dependencies of Solution Processes Excel
- C. SAP Cloud ALM Processes app
- D. SAP Cloud ALM Requirements app

Answer: A

NEW QUESTION # 31
Which of the following actions does the lead configuration expert carry out during the content deployment phase in the SAP S/4HANA Cloud starter system? Note: There are 3 correct answers to this question.

- A. Confirm primary finance settings
- B. Create two projects
- C. Define the scope
- D. Confirm primary logistics settings
- E. Confirm primary HCM settings

Answer: B,C,D

Explanation:
For implementing SAP S/4HANA Cloud Public Edition for a customer, the following systems are commonly used:

* Sandbox system: This system is used in the very early stages of the project for exploration and trying out different configurations without affecting the development or production environments. It's a safe space for experimentation.
* Development system: This system is where the initial setup and customizations are made. Configuration changes, custom development, and extensions are carried out here before being moved to the test system for further testing.
* Test system: After configurations and developments are done in the development system, they are transported to the test system. This environment is used for rigorous testing to ensure that everything works as expected and to identify any issues before moving to the production environment.

These systems play crucial roles in the implementation process, allowing for a structured and phased approach to setting up, customizing, testing, and finally deploying SAP S/4HANA Cloud Public Edition.
