## Updated C\_ARCIG\_2508 Authentic Exam Questions, Valid Test C\_ARCIG\_2508 Format

To some extent, to pass the C\_ARCIG\_2508 exam means that you can get a good job. The C\_ARCIG\_2508 exam materials you master will be applied to your job. The possibility to enter in big and famous companies is also raised because they need outstanding talents to serve for them. Our C\_ARCIG\_2508 Test Prep is compiled elaborately and will help the client a lot. Our product is of high quality and the passing rate and the hit rate are both high.

### SAP Certified Associate - Implementation Consultant - Managed gateway for spend management and SAP Business Network Sample Questions (Q33-Q38):

#### NEW QUESTION # 33

Which of the following validation options does the Document Validator tool offer? Note: There are 3 correct answers to this question.

- A. Schema Validation
- B. Content Validation
- C. User Login Credentials
- D. Transformation
- E. Tax Calculation

**Answer: A,B,D**

Explanation:

I wasn't able to find a definitive reference on learning.sap.com that explicitly lists the validation options offered by the Document Validator tool in the context of the SAP Integration Suite, Managed Gateway for Spend Management, or Business Network. The material I could access doesn't clearly enumerate these options.

However, based on typical functionality and supported features described across related SAP documentation (though not verified via learning.sap.com), the most likely valid options related to the Document Validator are:

\*A. Schema Validation

\*B. Content Validation

\*C. Transformation

Options like D. User Login Credentials and E. Tax Calculation do not align with standard validation functionalities of such tools (they are operational or calculation features, not validations).

I cannot confirm these definitively from learning.sap.com because the relevant course or help pages that spell out the Document Validator's validation capabilities were not found in my search results.

If you can provide a specific chapter, lesson title, or link from learning.sap.com about the Document Validator tool, I'd be able to check again more precisely.

### NEW QUESTION # 34

Which of the following master data events are supported with the IMG activity for Configure Ariba Incremental Extract Event in the Managed Gateway-Addon? Note: There are 3 correct answers to this question.

- A. Cost center
- B. item category
- C. Company code
- D. Buyer catalog upload request
- E. Sourcing material master

**Answer: A,C,E**

Explanation:

According to learning.sap.com in the lesson "Configuring Ariba Master Data Incremental Extract Event," the master data events supported with the IMG activity for configuration are Cost Center, Company Code, and WBS Element. SAP Help Portal Therefore, the three correct answers are:

\*B. Cost center

\*C. Company code

\*D. Sourcing material master - (Note: Actually, the third supported event is WBS element, not sourcing material master. Since sourcing material master is not supported, the correct third option is WBS element, which corresponds to none of the provided choices. Possibly your option list has a typo or mismatch - if option D refers to WBS element instead of "Client ID" or similar, that would be the correct pick.) But strictly from the exact options given (A-E), the correct supported events are:

\*B. Cost center

\*C. Company code

\*(Assuming "Item category" was meant to reference WBS element - but that is not clear.) Given the likely intended choices, the answer is: B.

Cost center, C. Company code, (and WBS element).

### NEW QUESTION # 35

What is the purpose of maintaining variants and partitions in the context of integration using the SAP Integration Suite, managed gateway for spend management and SAP Business Network?

- A. To define data variants for version control of integration flows
- B. To use partition settings to generate backup IDocs in SAP
- C. To maintain print variants for PO output types in SAP
- D. To differentiate configuration parameters for different documents based on the solution

**Answer: D**

Explanation:

Solution:

Based on learning.sap.com documentation, the purpose of maintaining variants and partitions in the SAP Integration Suite, managed gateway for spend management and SAP Business Network is:

\*To differentiate configuration parameters for different documents based on the solution. This allows you to assign unique variant and partition combinations to specific SAP Ariba solutions (e.g., Procurement, Sourcing), enabling distinct behaviors or mappings per solution. SAP Help Portal Therefore, the correct answer is:

\*D. To differentiate configuration parameters for different documents based on the solution

### NEW QUESTION # 36

While defining an RFC destination in a direct connectivity deployment scenario for SAP Business Network integration via Managed Gateway for Spend&Network, what value needs to be maintained in the Technical Settings section for the Path Prefix field?

- A. /cxf/receiveERPIDOC
- B. /cxf/receiveIDOC
- C. /cxf/receiveANIDOC
- D. /cxf/receiveERPMD
