

Fortinet FCSS_LED_AR-7.6 Exam | Hot FCSS_LED_AR-7.6 Questions - Valuable PDF Guide for your FCSS_LED_AR-7.6 Studying

BTW, DOWNLOAD part of PassLeaderVCE FCSS_LED_AR-7.6 dumps from Cloud Storage: <https://drive.google.com/open?id=1JDgayK9cotzYAVNL9cv6dZLMUh3gQ2UY>

Before the clients buy our FCSS_LED_AR-7.6 guide prep they can have a free download and tryout. The client can visit the website pages of our product and understand our FCSS_LED_AR-7.6 study materials in detail. You can see the demo, the form of the software and part of our titles. To better understand our FCSS_LED_AR-7.6 Preparation questions, you can also look at the details and the guarantee. So it is convenient for you to have a good understanding of our FCSS_LED_AR-7.6 exam questions before you decide to buy our FCSS_LED_AR-7.6 training materials.

Fortinet FCSS_LED_AR-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Central Management: This section addresses managing FortiSwitch via FortiManager over FortiLink, implementing zero-touch provisioning, configuring VLANs, ports, and trunks, and setting up FortiExtender and FortiAP devices.
Topic 2	<ul style="list-style-type: none">• Authentication: This domain covers advanced user authentication using RADIUS and LDAP, two-factor authentication with digital certificates, and configuring syslog and RADIUS single sign-on on FortiAuthenticator.
Topic 3	<ul style="list-style-type: none">• Zero-Trust LAN Access: This domain covers machine authentication, MAC Authentication Bypass, NAC policies for wireless security, guest portal deployment, and advanced solutions like FortiLink NAC, dynamic VLAN, and VLAN pooling.
Topic 4	<ul style="list-style-type: none">• Monitoring and Troubleshooting: This section covers configuring quarantine mechanisms, managing FortiAIops, troubleshooting FortiGate communication with FortiSwitch and FortiAP, and using monitoring tools for wireless connectivity.

2026 Authoritative 100% Free FCSS_LED_AR-7.6 – 100% Free Hot Questions | FCSS_LED_AR-7.6 PDF Guide

Latest FCSS_LED_AR-7.6 test questions are verified and tested several times by our colleagues to ensure the high pass rate of our Fortinet FCSS_LED_AR-7.6 study guide. We are popular not only because our outstanding Fortinet FCSS_LED_AR-7.6 practice dumps, but also for our well-praised after-sales service. After purchasing our Fortinet FCSS_LED_AR-7.6 practice materials, the

free updates will be sent to your mailbox for one year long if our experts make any of our Fortinet FCSS_LED_AR-7.6 guide materials.

Fortinet FCSS - LAN Edge 7.6 Architect Sample Questions (Q66-Q71):

NEW QUESTION # 66

When configuring a FortiSwitch trunk port, which actions are needed?

(Choose two)

Response:

- A. Set native VLAN ID
- B. Enable RSTP
- C. Specify allowed VLANs
- D. Disable LLDP

Answer: A,C

NEW QUESTION # 67

What is the default trunking protocol supported by FortiSwitch?

Response:

- A. 802.1Q
- B. LACP
- C. VTP
- D. STP

Answer: A

NEW QUESTION # 68

Refer to the exhibits.

FortiGate VLAN AP settings

```
config system interface
  edit "APs"
    set vdom "root"
    set ip 10.10.100.254 255.255.255.0
    set allowaccess ping
    set alias "AP Management"
    set device-identification enable
    set role lan
    set snmp-index 118
    set ip-managed-by-fortiipam disable
    set interface "fortilink"
    set vlanid 100
  next
end
```

DHCP configuration

```
config system dhcp server
  edit 7
    set dns-service default
    set default-gateway 10.10.100.254
    set netmask 255.255.255.0
    set interface "APs"
    config ip-range
      edit 1
        set start-ip 10.10.100.1
        set end-ip 10.10.100.253
      next
    next
  next
end
```

FortiSwitch port1 VLAN AP assignment

```
config switch-controller managed-switch
  edit "FortiSwitch"
    set sn "S224EPTF19006016"
    set fsw-wan1-peer "fortilink"
    set fsw-wan1-admin enable
    set poe-detection-type 2
    set version 1
    set max-allowed-trunk-members 8
    set pre-provisioned 1
    set dynamic-capability 0x000000000000000001551027757dddf7
    config ports
      edit "port1"
        set poe-capable 1
        set vlan "APs"
        set allowed-vlans "VLAN102" "VLAN101" "quarantine"
        set untagged-vlans "quarantine"
        set export-to "root"
        set mac-addr 04:d5:90:39:7d:8e
      next
    next
  next
end
```

A FortiSwitch is successfully managed by a FortiGate. FortiAP is connected to port1 of the managed FortiSwitch. On FortiGate, the VLAN AP is configured to detect and manage FortiAP, along with a DHCP server for the VLAN AP. Additionally, the VLAN AP is assigned to port1 of FortiSwitch. However,

FortiGate is unable to detect or manage FortiAP.

Which FortiGate misconfiguration is preventing the detection of FortiAP?

- A. The CAPWAP ports (UDP 5246 and 5247) are not open on FortiGate.
- B. The VLAN is not tagged correctly on the FortiSwitch uplink port.
- C. The FortiAP firmware is incompatible with the FortiGate firmware version.

- **D. Security Fabric is disabled in the administrative access options of the VLAN.**

Answer: D

Explanation:

From the exhibits:

* Interface "APs" is a VLAN sub-interface on FortiLink with IP 10.10.100.254/24 and a DHCP server scope 10.10.100.1-10.10.100.253.

* This VLAN is assigned to port 1 on the managed FortiSwitch for FortiAPs.

* The interface config shows only allow access ping - Security Fabric Connection is not enabled.

In LAN Edge designs, FortiAPs connected through FortiSwitch are discovered and managed as LAN edge devices of the Security Fabric. FortiOS documentation states that FortiAPs and FortiSwitches appear in the Fabric topology only when connected on an interface with Security Fabric Connection enabled.

If the VLAN/AP management interface lacks Security Fabric Connection:

* FortiGate does not treat that network as a Fabric connection segment.

* CAPWAP discovery from FortiAPs on that VLAN will not result in the AP being onboarded and shown for management.

Therefore the key misconfiguration is:

#A - Security Fabric is disabled on the VLAN interface used for AP management.

Why the others are not the root cause:

* B. Firmware incompatibility - would usually show as a "Managed (upgrade required)" or similar status after discovery, not complete non-detection. The scenario specifically points to a configuration issue, not firmware.

* C. VLAN not tagged correctly on uplink - The FortiSwitch uplink to FortiGate is the FortiLink trunk, and the VLAN sub-interface APs is already bound to FortiLink, so tagging on the uplink is correct by definition.

* D. CAPWAP ports not open - CAPWAP (UDP 5246/5247) is terminated locally on FortiGate and does not depend on any firewall policy; these ports are open on the FortiGate itself by default.

NEW QUESTION # 69

You configure FortiAuthenticator syslog to a remote FortiAnalyzer. What additional feature becomes available with this integration?

Response:

- A. Certificate Authority Management
- **B. Log Analytics and Reports**
- C. Local Authentication Proxy
- D. RADIUS Dictionary Customization

Answer: B

NEW QUESTION # 70

Refer to the exhibit, which shows the WTP profile configuration.

WTP profile configuration

```
config wireless-controller wtp-profile
  edit "S231F"
    config platform
      set type 231F
    end
    set handoff-rssi 30
    set handoff-sta-thresh 30
    set ap-country US
    config radio-1
      set band 802.11n-2G
      set wids-profile "default-wids-apscan-enabled"
      set vap-all manual
      set vaps "Student01"
      set channel "1" "6" "11"
    end
    config radio-2
      set band 802.11ac-5G
      set channel-bonding 40MHz
      set wids-profile "default-wids-apscan-enabled"
      set darrp enable
      set arrp-profile "arrp-default"
      set vap-all manual
      set vaps "Student01"
      set channel "36" "44" "52"
    end
    config radio-3
      set mode disabled
    end
  next
end
```

The AP profile is assigned to two FAP-231F APs that are installed in an open plan area.

The first AP has 32 clients associated with the 5 GHz radios and 22 clients associated with the

2.4 GHz radio. The second AP has 12 clients associated with the 5 GHz radios and 20 clients associated with the 2.4 GHz radio.

A dual-band-capable client enters the area near the first AP and the first AP measures the new client at -33 dBm signal strength. The second AP measures the new client at -43 dBm signal strength.

If the new client attempts to connect to the Student01 wireless network, which AP radio will the client be associated with?

- A. The second AP 2.4 GHz interface is preferred over 5 GHz for better speed and lower interference.
- **B. The second AP 5 GHz interface has fewer clients, which ensures better performance despite the weaker signal.**
- C. The first AP 2.4 GHz interface provides a stronger signal, which clients often prioritize.
- D. The first AP 5 GHz interface because it has a stronger signal.

Answer: B

Explanation:

The profile is configured for client load balancing with a handoff threshold of 30 clients and a handoff RSSI of 30. The first AP's 5 GHz radio already exceeds the threshold with 32 clients, so when a new client arrives, that overloaded AP will avoid replying if the client has sufficient signal at another AP. The second AP measures the client at -43 dBm, which is strong enough to satisfy the alternate-AP handoff condition, so the client is directed there. Because the client is dual-band capable and the profile applies handoff based on 5 GHz signal suitability, the client associates to the second AP's 5 GHz radio.

NEW QUESTION # 71

.....

There is almost no innovative and exam-oriented format that can be compared with the precision and relevance of the actual FCSS - LAN Edge 7.6 Architect exam questions, you get with PassLeaderVCE brain dumps PDF. As per the format of the FCSS_LED_AR-7.6 Exam, our experts have consciously created a questions and answers pattern. It saves your time by providing you direct and precise information that will help you cover the syllabus contents within no time.
