SAP C_WME_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Advancing your Skills in Building WalkMe Solutions: This section of the exam tests the advanced competencies of functional and business analysts in designing more complex and customized WalkMe solutions within SAP platforms. It requires a deeper understanding of user segmentation, advanced rules and triggers, performance optimization, and the use of analytics to refine user experiences. Candidates are expected to demonstrate their ability to design scalable and impactful guidance that aligns with SAP business processes and drives user adoption across the enterprise.
Topic 2	<ul style="list-style-type: none">Starting your Digital Adoption Journey: WalkMe Fundamentals: This section of the exam measures the skills of SAP project managers and covers the foundational concepts of digital adoption within SAP environments using WalkMe. Candidates are expected to understand the value of digital adoption platforms, the basic components of WalkMe, and how these tools align with business goals. The section emphasizes knowledge of the user experience within SAP and the ability to identify opportunities for improving digital workflows through in-app guidance and automation.
Topic 3	<ul style="list-style-type: none">Getting Started with Building WalkMe Solutions: This section of the exam evaluates the capabilities of WalkMe implementers and focuses on the practical aspects of creating and configuring WalkMe solutions. It includes understanding the WalkMe Editor, planning solution flows, creating Smart Walk-Thrus, Launchers, and ShoutOuts, and managing end-user guidance effectively. Candidates should be comfortable building initial WalkMe experiences that improve SAP usability and provide contextual help for users navigating SAP applications.

SAP Certified Associate - WalkMe Digital Adoption Consultant Sample Questions (Q18-Q23):

NEW QUESTION # 18

When adding new users to an account on a platform, admins must select their permission levels. The company gets a lot of support tickets about users asking what each permission level means or asking to adjust permission levels because they were set up incorrectly. The company already has a help article that lists out all of the permission level definitions, but it isn't used often. Which of these options would be the best solution to create with WalkMe?

- **A. Launcher next to the field that activates a Resource**
- B. Smart Walk-Thru navigating users to the help Resource
- C. ShoutOut every time admins begin adding a new user
- D. Validation SmartTip

Answer: A

Explanation:

The issue is that admins frequently submit support tickets due to confusion about permission levels, despite an existing help article. The best WalkMe solution is a Launcher next to the field that activates a Resource, which links directly to the help article. This approach provides context-sensitive access to the documentation exactly where admins need it-near the permission level field-encouraging its use and reducing support tickets without disrupting the workflow.

The other options are less effective:

- * ShoutOut every time admins add a user(A) is intrusive and not directly tied to the permission field.
- * Validation SmartTip(B) is for enforcing input rules, not linking to help content.
- * Smart Walk-Thru to the help Resource(C) is overly complex for simply accessing documentation.

Extract from Official WalkMe Documentation:

According to the WalkMe Editor User Guide (SAP WalkMe Digital Adoption Consultant Study Guide, Section 2.3: Launchers):

"Launchers placed next to form fields can activate Resources, such as help articles, providing instant access to relevant documentation to reduce user errors and support tickets." The course Getting Started with Building WalkMe Solutions states:

"For underutilized help content, place a Launcher near the relevant field to trigger a Resource, ensuring users access guidance in context to resolve confusion efficiently." Option D is the best solution to reduce support tickets by leveraging the existing help article.

NEW QUESTION # 19

Which of the following types of WalkMe content can be added to the Menu?

Note: There are 3 correct answers to this question.

- **A. Onboarding Tasks**
- B. SmartTips
- **C. Smart Walk-Thrus**
- **D. Resources**
- E. ShoutOuts

Answer: A,C,D

NEW QUESTION # 20

You are working on a Smart Walk-Thru step for which there are two buttons a user could click to move forward in the process. After they click either button, the remainder of the process is the same.

Which option below is the best way to address this?

- A. Add a Peer Step.
- **B. Add a Custom Trigger with multiple conditions.**
- C. Create a Split Step.
- D. Use a SmartTip to let the users know they can click either button for the flow to continue.

Answer: B

NEW QUESTION # 21

Which is the syntax that you type into the developer console to check your jQuery selectors using WalkMe?

- A. jQuery("InsertSelectorHere")
- **B. wmjQuery("InsertSelectorHere")**
- C. WMjquery InsertSelectorHere
- D. walkmejQuery("InsertSelectorHere")

Answer: B

NEW QUESTION # 22

You just created a SmartTip that is attached to a button. This button is only displayed on a popup modal window that will show up or disappear depending on how the user interacts with the page. When you publish the SmartTip to your site and are testing it, you notice that the SmartTip does not appear at all when opening the popup modal window and the SmartTip is supposed to appear every time the window is opened. What is the first configuration you should check to fix this issue?

- A. SmartTip Position
- **B. Element Behavior Setting - Appears and Disappears as Result of User Action**
- C. Lock to Element
- D. Element Behavior Setting - Appears After Page Load and Stays Visible

Answer: B

Explanation:

When a SmartTip is attached to an element in a popup modal window that appears and disappears based on user actions, the SmartTip may not display if its Element Behavior Settings is not configured to account for dynamic visibility. The setting Appears and Disappears as Result of User Action instructs WalkMe to monitor the element's visibility and display the SmartTip whenever the element (e.g., the button in the modal) becomes visible due to user interactions, such as opening the modal. This is the first configuration to check, as it directly addresses the dynamic nature of the modal window.

The other options are less relevant:

* SmartTip Position(B) affects placement but not whether the SmartTip appears.

* Appears After Page Load and Stays Visible(C) assumes the element is always visible after page load, which doesn't apply to a modal.

* Lock to Element(D) ensures positional alignment, not visibility triggering.

Extract from Official WalkMe Documentation:

Per the WalkMe Editor User Guide (SAP WalkMe Digital Adoption Consultant Study Guide, Section 2.5:

SmartTips):

"For elements in dynamic UI components like modals, set the Element Behavior to 'Appears and Disappears as Result of User Action' to ensure SmartTips display when the element becomes visible." The course Getting Started with Building WalkMe Solutions advises:

"If a SmartTip fails to appear on a modal window's element, first check the Element Behavior Setting. Use 'Appears and Disappears as Result of User Action' for elements that toggle visibility." Option A is the first configuration to check.
