

Exam Microsoft AZ-120 Duration - Exam Dumps AZ-120 Zip

2026 Latest DumpsMaterials AZ-120 PDF Dumps and AZ-120 Exam Engine Free Share: https://drive.google.com/open?id=1vcsv5IVrQ9OT123E_9POrSB3bBd6sAWw

Our approach to Microsoft AZ-120 Exam Preparation is focused on quality over quantity, which means our Microsoft AZ-120 practice tests help you identify the most important concepts and skills you need to master to pass the exam. We also provide ongoing 24/7 support to help you stay on track while using our product.

Microsoft AZ-120 certification exam covers a wide range of topics, including Azure infrastructure and deployment, Azure compute solutions, Azure storage solutions, Azure networking solutions, SAP workload deployment, and SAP workload management. To pass the exam, candidates must have a strong understanding of each of these areas and be able to apply their knowledge to real-world scenarios.

Candidates for the Microsoft AZ-120 exam should have a strong understanding of SAP workloads and their deployment in Azure. They should also be familiar with Azure services such as virtual machines, storage accounts, and networking. Additionally, candidates should have experience working with Azure Active Directory and be able to configure security and compliance settings for SAP workloads. AZ-120 Exam consists of multiple-choice questions and requires a passing score of 700 out of 1000 to earn the certification. Successful candidates will have demonstrated their ability to plan and manage Azure resources for SAP workloads, making them valuable assets to organizations that rely on SAP applications.

Exam Dumps AZ-120 Zip & Test AZ-120 Cram Review

We consider the actual situation of the test-takers and provide them with high-quality AZ-120 learning materials at a reasonable price. Choose the AZ-120 test guide absolutely excellent quality and reasonable price, because the more times the user buys the AZ-120 test guide, the more discounts he gets. In order to make the user's whole experience smoother, we also provide a thoughtful package of services. Once users have any problems related to the AZ-120 learning questions, our staff will help solve them as soon as possible.

Microsoft AZ-120 exam is designed for professionals who are involved in planning, deploying, and managing Microsoft Azure solutions for SAP workloads. AZ-120 exam is ideal for individuals who have experience in SAP applications and want to expand their knowledge in cloud computing. By passing the AZ-120 Exam, candidates will demonstrate their competence in designing, implementing, and managing Azure solutions for SAP workloads.

Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q245-Q250):

NEW QUESTION # 245

You have an Azure virtual machine named VM1 that hosts an SAP application server.

You need to implement snoozing for VM1. The solution must meet the following requirements:

- * Minimize compute costs for VM1.
- * Gracefully terminate the SAP application.

What should you do? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

On VM1, run:

From Azure Cloud Shell, run:

Answer:

Explanation:

On VM1, run:

From Azure Cloud Shell, run:

Explanation:

Answer Area

On VM1, run:

From Azure Cloud Shell, run:

NEW QUESTION # 246

Note: This section contains one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem. You must determine whether the solution meets the stated goals.

More than one solution in the set might solve the problem. It is also possible that none of the solutions in the set solve the problem. After you answer a question in this section, you will NOT be able to return. As a result, these questions do not appear on the Review Screen.

You have an on-premises datacenter.

You have an Azure subscription that contains a virtual network named VNet1.

You have an SAP RISE managed workload.

You need to ensure transitive connectivity between the datacenter, VNet1, and the managed workload.

Solution: You configure a Site-to-Site (S2S) VPN connection between the datacenter and VNet1 and an S2S VPN connection between VNet1 and the managed workload.

Does this meet the goal?

- A. NO
- B. Yes

Answer: B

NEW QUESTION # 247

You plan to deploy an SAP environment on Azure.

You plan to store all SAP connection strings securely in Azure Key Vault without storing credentials on the Azure virtual machines that host SAP.

What should you configure to allow the virtual machines to access the key vault?

- A. a Managed Service Identity (MSI)
- B. role-based access control (RBAC)
- C. Azure Active Directory (Azure AD) Privilege Identity Manager (PIM)
- D. the Custom Script Extension

Answer: A

Explanation:

To reference a credential stored in Azure Key Vault, you need to:

1. Retrieve data factory managed identity
2. Grant the managed identity access to your Azure Key Vault
3. Create a linked service pointing to your Azure Key Vault.
4. Create data store linked service, inside which reference the corresponding secret stored in key vault.

<https://docs.microsoft.com/bs-latn-ba/azure/data-factory/store-credentials-in-key-vault>

NEW QUESTION # 248

You are deploying an SAP environment across Azure Availability Zones. The environment has the following components:

- * ASCS/ERS instances that use a failover cluster
- * SAP application servers across the Azure Availability Zones
- * Database high availability by using a native database solution

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
Network latency is a limiting factor when deploying DBMS instances that use synchronous replication across the Azure Availability Zones.	<input type="radio"/>	<input type="radio"/>
The performance of SAP systems can be validated by using ABAPMeter.	<input type="radio"/>	<input type="radio"/>
To help identify the best Azure Availability Zones for deploying the SAP components, you can use NIPING to verify network latency between the zones.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements	Yes	No
Network latency is a limiting factor when deploying DBMS instances that use synchronous replication across the Azure Availability Zones.	<input checked="" type="radio"/>	<input type="radio"/>
The performance of SAP systems can be validated by using ABAPMeter.	<input checked="" type="radio"/>	<input type="radio"/>
To help identify the best Azure Availability Zones for deploying the SAP components, you can use NIPING to verify network latency between the zones.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

Box 1: Yes

Box 2: Yes

AAP application server to database server latency can be tested with ABAPMeter report /SSA/CAT.

Box 3: Yes

To analyze network issue or measure network metrics you can test the connection using SAP ' s NIPING program. You can use NIPING to analyze the network connection between any two machines running SAP software.

<https://docs.microsoft.com/en-us/azure/virtual-machines/workloads/sap/sap-ha-availability-zones#:~:text=In%20some%20Azure%20regions%2C%20the%20network%20latency%20among%20the%20three,2%20milliseconds%20is%20not%20correct.>

20milliseconds%20is%20not%20correct .

NEW QUESTION # 249

You are implementing a highly available deployment of SAP HANA on Azure virtual machines. You need to ensure that the deployment meets the following requirements:

* Supports host auto-failover

* Minimizes cost

How should you configure the highly available components of the deployment? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 250
