PAP-001 Test Vce & Practice PAP-001 Online

Most people define PAP-001 study tool as regular books and imagine that the more you buy, the higher your grade may be. It is true this kind of view make sense to some extent. However, our PAP-001 real questions are high efficient priced with reasonable amount, acceptable to exam candidates around the world. Our PAP-001 practice materials comprise of a number of academic questions for your practice, which are interlinked and helpful for your exam. Unlike those untenable practice materials in the market, our PAP-001 practice materials are highly utilitarian for their accuracy of the real exam because all content are compiled by

proficient experts who engaged in this area more than ten years. It is our unswerving will to help you pass the exam by PAP-001 study tool smoothly.

Ping Identity Certified Professional - PingAccess Sample Questions (Q49-Q54):

NEW QUESTION # 49

An administrator configures the following:

- * HTTP Request Parameter Rule for "can_read=yes"
- * Web Session Attribute Rule for Opt-in = yes
- * Web Session Attribute Rule for group = customerService
- * Rule Set A (ALL) # includes (HTTP Request Parameter Rule)
- * Rule Set B (ANY) # includes (Opt-in yes, group customerService)
- * Rule Set Group C (ALL) # includes (Rule Set A, Rule Set B) Assigned to the web application.

Which set of conditions must be met to be able to access the application?

- A. The request requires a parameter called can_read with a value of yes. Additionally, the authenticated user must be in customer service and have the opt-in attribute set to yes.
- **B. The request requires a parameter called can_read with a value of yes. The authenticated user must be either in customer service or have the opt-in attribute set to yes.**
- C. The request requires a parameter called can_read with a value of yes unless the authenticated user is in either customer service or has the opt-in attribute set to yes.
- D. The request requires a parameter called can_read with a value of yes unless the authenticated user is in customer service and the opt-in attribute set to yes.

Answer: B

Explanation:

The Rule Set Group C (ALL) requires both Rule Set A and Rule Set B to evaluate to true.

* Rule Set A (ALL) requires can_read=yes.

* Rule Set B (ANY) requires either Opt-in=yes OR group=customerService.

* Together in Rule Set Group C (ALL), both conditions must hold:

* can_read=yes must be present in the request.

* User must have either opt-in=yes or be in the customerService group.

This matches Option D exactly.

* Option A is incorrect; it requires both attributes in Rule Set B, but B is ANY (either is sufficient).

* Option B is incorrect; the "unless" wording is misleading - the parameter is always required because Rule Set A uses ALL.

* Option C is incorrect; same reasoning as above, B is ANY not AND.

* Option D is correct - can_read=yes AND (opt-in=yes OR group=customerService).

Reference: PingAccess Administration Guide - Rules, Rule Sets, and Rule Set Groups

NEW QUESTION # 50

An organization has a highly available PingAccess cluster with four runtime nodes. The administrator wants to provide the same availability to administrative users. What should the administrator do?

- A. Configure one active and one replica administrative node with engine cluster pointed to both administrative nodes
- B. Configure two active administrative nodes with engine cluster pointed to both administrative nodes for configuration
- C. Configure four active administrative nodes with engine cluster pointed to all administrative nodes for configuration
- **D. Configure one active and three replica administrative nodes with engine cluster pointed to all administrative nodes**

Answer: D

Explanation:

PingAccess supports one primary administrative console (active) and any number of replica administrative consoles. Engines must be configured to connect to the active console, with replicas available for failover.

Exact Extract:

"In a clustered environment, PingAccess supports one clustered console (active) and replica consoles. Engines can connect to any console node for high availability."

* Option A is incomplete - only one replica limits redundancy.

* Option B is incorrect - multiple active consoles are not supported.

- * Option C is incorrect - cannot run two active consoles.
 - * Option D is correct - one active admin console with multiple replicas ensures HA.
- Reference: PingAccess Administration Guide - Clustered Console and Replica Configuration

NEW QUESTION # 51

According to a new business requirement, critical applications require dual-factor authentication when specific resources are accessed in those applications. Which configuration object should the administrator use in the applications?

- A. UI Authentication
- B. Auth Token Management
- **C. Authentication Requirements**
- D. Authentication Challenge Policy

Answer: C

Explanation:

PingAccess enforces step-up or multi-factor authentication using Authentication Requirements, which can be applied to specific resources within an application.

Exact Extract:

"Authentication requirements allow administrators to configure additional authentication (for example, MFA) when accessing sensitive application resources."

- * Option A (UI Authentication) applies to access to the admin console, not application resources.
- * Option B (Auth Token Management) relates to OAuth token lifetimes and refresh, not MFA enforcement.
- * Option C (Authentication Requirements) is correct - these rules enforce MFA or step-up auth for specific URLs/resources.
- * Option D (Authentication Challenge Policy) governs how failed auth challenges are presented but does not enforce MFA.

Reference: PingAccess Administration Guide - Authentication Requirements

NEW QUESTION # 52

Refer to the following applications:

- * hr.company.com
- * finance.company.com
- * customer.order.company.com

Which action should be taken to allow these applications to share the same web session?

- A. Use Rewrite Cookie Path rule
- B. Set Audience option
- C. Use Rewrite Cookie Domain rule
- **D. Set Cookie Domain option**

Answer: D

Explanation:

For multiple subdomains to share the same PingAccess session, the Cookie Domain must be configured so that the session cookie is valid across all listed applications.

Exact Extract:

"Set the Cookie Domain in the web session configuration to a parent domain (for example, .company.com) to enable applications in different subdomains to share the same session."

- * Option A (Set Audience option) applies to OAuth token validation, not cookie sharing.
- * Option B (Set Cookie Domain option) is correct - e.g., setting company.com allows session cookies to be shared.
- * Option C (Rewrite Cookie Domain rule) modifies upstream cookies for back-end applications, not PingAccess session cookies.
- * Option D (Rewrite Cookie Path rule) is unrelated; it modifies paths for cookies, not domains.

Reference: PingAccess Administration Guide - Web Session Configuration

NEW QUESTION # 53

An administrator is setting up PingAccess to terminate SSL for a proxied application. What action must the administrator take to configure an existing certificate for that application?

- A. Set the secure flag to Yes in the Site configuration
- B. Assign the Key Pair to the Agent Listener
- **C. Assign the Key Pair to the Virtual Host**
- D. Enable Require HTTPS in the Application configuration

Answer: C

Explanation:

PingAccess terminates SSL at the Virtual Host level. To configure an existing certificate, the administrator must assign the appropriate Key Pair (which contains the certificate and private key) to the Virtual Host.

Exact Extract:

"SSL termination occurs on the engine listener through virtual hosts. Assign the certificate's key pair to the virtual host to secure proxied applications."

- * Option A is correct - assign the key pair to the Virtual Host for SSL termination.
- * Option B is incorrect - Require HTTPS enforces secure access but does not configure SSL termination.
- * Option C is incorrect - Agent Listener is for PingAccess Agents, not proxied apps.
- * Option D is incorrect - secure flag affects cookie settings, not SSL certificates.
