## WGU Information Technology Management QGC1 Sample Questions (Q117-

## Q122):

### NEW QUESTION # 117

Which type of memory describes a special type of rewritable memory that is compact and portable?

- A. Cache
- **B. Flash**
- C. Read-only
- D. Random access

#### Answer: B

Explanation:

Flash memory is a type of non-volatile rewritable memory that is compact and portable. It is commonly used in USB drives, SSDs, and memory cards. Unlike RAM, which loses data when power is off, flash memory retains stored information even without power.

### NEW QUESTION # 118

Which method of encryption enables secure communication using a shared secret key?

- A. Data masking
- B. Asymmetrical encryption
- C. Secure hashing
- **D. Symmetrical encryption**

#### Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Symmetrical (symmetric) encryption uses a single shared secret key for both encryption and decryption of data. Both the sender and the receiver must have access to the same key, and the security of the communication depends on keeping that key confidential.

Key points about symmetric encryption:

One key for both directions: The same key encrypts plaintext and decrypts ciphertext.

Fast and efficient: Often used for encrypting large amounts of data (e.g., AES).

Commonly used in secure channels after an initial key exchange has occurred.

Why the other options are incorrect:

A . Asymmetrical encryption - Uses a public key for encryption and a private key for decryption. It does not rely on a single shared secret key; rather, it uses a key pair.

B . Secure hashing - A hash function transforms data into a fixed-size value; it is one-way and does not support decryption. Hashing is not an encryption method for secure two-way communication.

C . Data masking - Obscures data (e.g., hiding digits of a credit card number) for privacy in non-production use or display; it is not an encryption method for secure communication.

Therefore, the correct answer is D. Symmetrical encryption, because it specifically involves secure communication using a shared secret key known to both parties.

### NEW QUESTION # 119

What is a wireframe in IT design?

- A. A polished design with visual design and interactivity
- B. A detailed coded interface for backend testing
- C. A diagram of system data flow without functionality
- **D. A basic layout without visual design or interactivity**

#### Answer: D

Explanation:

#### Comprehensive and Detailed Explanation From Exact Extract:

In IT and UX design, a wireframe is a low-fidelity, structural blueprint of a screen, page, or interface. Its key characteristics are: It shows the basic layout: placement of menus, buttons, content areas, images, forms, and navigation elements. It does not focus on visual styling: usually no colors, branding, fonts, or detailed graphics.

It generally has no interactivity: it represents what goes where, not how the system behaves in detail.

Wireframes are used to:

Clarify information hierarchy and navigation flow.

Align stakeholders on the structure of the solution before investing in visual design or development.

Serve as a bridge between requirements and higher-fidelity mockups or prototypes.

This is exactly described by "a basic layout without visual design or interactivity," which matches Option C .

Why the other options are incorrect:

A . A diagram of system data flow without functionalityThat describes a data flow diagram (DFD), not a wireframe. DFDs focus on data movement, not page layout.

B . A polished design with visual design and interactivityThat describes a high-fidelity mockup or interactive prototype, not a wireframe.

D . A detailed coded interface for backend testingThat refers to an implemented UI or test harness, which goes far beyond the purpose and fidelity of wireframes.

#### NEW QUESTION # 120

Which staffing issue can occur with offshore outsourcing?

- A. Longer onboarding timelines
- B. Limited visibility into daily work
- **C. High turnover with less consistency**
- D. Increased time spent on coordination

**Answer: C**

Explanation:

A significant staffing issue in offshore outsourcing is high employee turnover, which leads to inconsistent performance, knowledge loss, and increased training costs. Retention challenges in offshore teams can disrupt long-term projects and service consistency.

Option B: Coordination time is a project management challenge, not specifically staffing.

Option C: Limited visibility is a management oversight issue, not staffing.

Option D: Onboarding timelines may vary but are not a primary staffing concern.

Thus, the staffing issue is high turnover with less consistency.
