

# ZDTE Pass4sure Torrent & ZDTE Valid Pdf & ZDTE Testking Exam

The exam outline will be changed according to the new policy every year, and the ZDTE questions torrent and other teaching software, after the new exam outline, we will change according to the syllabus and the latest developments in theory and practice and revision of the corresponding changes, highly agree with outline. After you choose our study materials, you can master the examination point from the ZDTE Guide question. Then, you will have enough confidence to pass your exam. As for the safe environment and effective product, why don't you have a try for our ZDTE question torrent, never let you down!

Our ZDTE exam torrents enjoy both price and brand advantage at the same time. We understand you not only consider the quality of our Zscaler Digital Transformation Engineer prepare torrents, but price and after-sales services and support, and other factors as well. So our Zscaler Digital Transformation Engineer prepare torrents contain not only the high quality and high accuracy ZDTE Test Braindumps but comprehensive services as well. With the assistance of our ZDTE exam torrents, you will be more distinctive than your fellow workers, because you will learn to make full use of your fragmental time to achieve your goals.

## ZDTE Books PDF & ZDTE Free Download Pdf

Our ZDTE study materials present the most important information to the clients in the simplest way so our clients need little time and energy to learn our ZDTE study materials. The clients only need 20-30 hours to learn and prepare for the test. For those people who are busy in their jobs, learning or other things this is a good news because they needn't worry too much that they don't have enough time to prepare for the test and can leisurely do their main things and spare little time to learn our ZDTE Study Materials. So it is a great advantage of our ZDTE study materials and a great convenience for the clients.

## Zscaler Digital Transformation Engineer Sample Questions (Q60-Q65):

### NEW QUESTION # 60

When using a Domain Joined posture element to allow access in a ZPA Access Policy, which statement is true?

- A. Zscaler ZPA can contact the IDP such as Azure AD out-of-band to verify if a device is joined to a particular domain.
- B. Only some Linux operating systems have Domain Joined posture profile support in Zscaler.
- C. If a 2nd domain and a sub-domain are needed in the Access Policy rule you must create a 2nd posture profile with the other domain and add it to the Access Policy.
- D. When a ZPA Browser Access client attempts to access an application, Zscaler can determine if that device is joined to a particular domain.

**Answer: D**

Explanation:

The Domain Joined posture element in ZPA evaluates whether a device belongs to a specific Active Directory domain. ZPA performs this evaluation using the device's local posture signals, either through the Zscaler Client Connector posture engine or through the browser-based posture evaluation framework used in ZPA Browser Access. When a user connects via Browser Access, ZPA can still determine domain membership by inspecting the allowed browser posture attributes provided by the endpoint, enabling device-based Zero Trust controls without requiring a full Client Connector installation.

Linux endpoints do not support domain-joined posture verification, making option A incorrect. Domain join validation is performed at the device level, not through the Identity Provider, because IdPs validate users, not device domain status, eliminating option D. ZPA's posture configuration allows you to define multiple domains within a single posture profile, so creating a second posture profile is unnecessary, making option C incorrect.

Therefore, the correct statement is that ZPA Browser Access can determine whether the device is joined to the specified domain, which aligns with the expected behavior of the domain-joined posture element.

## NEW QUESTION # 61

Any Zscaler Client Connector (ZCC) App Profile must include which of the following?

- A. Forwarding Profile
- B. Authentication Profile
- C. Exception Profile
- D. Bypass Profile

### Answer: A

Explanation:

Within the Zscaler Client Connector administration portal, an App Profile defines how the client behaves for a set of users or devices. A key element of any App Profile is the associated Forwarding Profile. The Forwarding Profile tells the Zscaler Client Connector how to handle traffic in different network conditions:

for example, whether to send traffic through Z-Tunnel 2.0 to ZIA and/or ZPA, rely on a PAC file, or bypass Zscaler when on trusted networks.

When you create or edit an App Profile, selecting a Forwarding Profile is mandatory because it determines how user traffic will actually reach the Zscaler cloud. Without a Forwarding Profile, the App Profile would not know which forwarding mode to use, and the client would have no consistent instructions on when and how to tunnel or bypass traffic. In practice, customers often define multiple Forwarding Profiles (for example,

"ZIA-only," "ZPA-only," or "ZIA and ZPA") and then bind them to different App Profiles for different user groups or device types. "Bypass," "authentication," or "exception" profiles are not separate required profile objects in the ZCC policy model. Any bypass or exception behavior is defined inside the forwarding and app profile logic, not as standalone mandatory profiles. Therefore, a Forwarding Profile is the one element that every ZCC App Profile must include.

## NEW QUESTION # 62

How many minutes of data can the Log Streaming Service retransmit once the connection is restored between App Connectors and Zscaler Private Access (ZPA)?

- A. Last 30 minutes
- B. Last 60 minutes
- C. Last 15 minutes
- D. Last 20 minutes

### Answer: C

Explanation:

Zscaler Private Access (ZPA) uses the Log Streaming Service (LSS) to deliver ZPA logs (such as user activity and connector/authentication logs) to external SIEM and analytics platforms. LSS relies on a ZPA App Connector as the local relay between the ZPA service and the downstream log receiver. If network connectivity between ZPA and the local App Connector is interrupted, log delivery may be temporarily disrupted.

According to Zscaler integration guidance, when connectivity between ZPA and the local App Connectors is restored, LSS can retransmit up to 15 minutes of previously undelivered log data, although this retransmission is not guaranteed in all circumstances. This limited replay window is designed to provide reasonable resilience for short outages without requiring large local storage on the connector.

The 15-minute buffer applies specifically to ZPA log streaming scenarios and is distinct from longer-term log retention in Zscaler's logging cluster or external SIEM. Options A, C, and D overstate the supported replay duration and do not match Zscaler's

documented behavior. To minimize log gaps beyond this 15-minute window, Zscaler recommends resilient network paths for App Connectors and careful monitoring of connector health so that LSS can operate continuously.

### NEW QUESTION # 63

What is the primary benefit of using a subcloud in Zscaler?

- A. To improve the accuracy of geolocation data
- B. To guarantee that web traffic is forwarded to preferred ZIA Public Service Edges
- C. To increase the number of available Public Service Edges
- D. To eliminate the need for ZIA Public Service Edges

#### Answer: B

Explanation:

A subcloud in Zscaler is defined as a subset of ZIA Public Service Edges (data centers) that you group together and associate with specific locations or traffic. Conceptually, it is a logical "pool" of preferred Public Service Edges. When a user or site is mapped to a given subcloud, their traffic is steered only to that selected subset of Service Edges instead of any available data center in the wider cloud.

The main benefit of this design is control and predictability: you can guarantee that web traffic is forwarded to your preferred ZIA Public Service Edges, which is critical when you must keep egress IPs stable for SaaS allow-lists, regulatory requirements, or local data-residency mandates. Subclouds also help with operational resilience, because you can temporarily exclude problematic data centers from a subcloud without changing overall forwarding methods, ensuring continuity while still using your defined group of Service Edges. They do not increase the number of Service Edges, replace ZIA Public Service Edges, or directly affect IP geolocation precision. Therefore, option C correctly captures the primary benefit expected in the ZDTE/EDU-202 context.

### NEW QUESTION # 64

For App Connectors, why shouldn't the customer pre-configure memory and CPU resources to accommodate a higher bandwidth capacity, like 1 Gbps or more?

- A. Cloud resources are expensive. Don't advise the customer to waste money.
- B. Port exhaustion and file descriptors will often be the limiting factor, not memory or CPU.
- C. Storage will be the primary bottleneck, so adding more RAM or CPU cycles won't improve performance anyway.
- D. They can and should, without concern. More resources are better.

#### Answer: B

Explanation:

In ZPA, App Connectors are designed to be lightweight, horizontally scalable components. Their effective throughput and concurrent-connection capacity are often constrained more by network stack limitations (such as ephemeral port exhaustion and per-process file descriptor limits) than by raw CPU or memory. As a result, simply over-provisioning vCPUs and RAM to "hit" a target like 1 Gbps on a single connector usually does not provide linear performance gains.

Zscaler design guidance emphasizes deploying multiple App Connectors and allowing ZPA to intelligently load-balance traffic across them. This delivers resiliency and scales capacity while staying within realistic limits of TCP/UDP ports and OS-level descriptors. Over-scaling a single connector can lead to diminishing returns and may even create harder-to-diagnose issues when port ranges or file descriptors are saturated.

Storage is not the main factor in App Connector performance, and the platform does not recommend a "just throw more resources at it" approach. For these reasons, the correct answer is that port exhaustion and file descriptors, rather than memory or CPU, are typically the true limiting factors for App Connectors.

### NEW QUESTION # 65

.....

Users of this format don't need to install excessive plugins or software to attempt the ZDTE web-based practice exams. Another format of the ZDTE practice test is the desktop-based software. This ZDTE Exam simulation software needs installation only on Windows computers to operate. The third format of the DumpsReview Zscaler ZDTE exam dumps is the ZDTE Dumps PDF.
