With the rapid development of the world economy and frequent contacts between different countries, looking for a good job has become more and more difficult for all the people. So it is very necessary for you to get the 212-82 certification, you have to increase your competitive advantage in the labor market and make yourself distinguished from other job-seekers. Our 212-82 Exam Questions can help you make it. As the most professional 212-82 study guide, we have helped numerous of our customer get a better career and live a better life now.

ECCouncil 212-82 (Certified Cybersecurity Technician) certification exam is an essential requirement for IT professionals looking to establish their careers in cybersecurity. It is a globally recognized certification that demonstrates the candidate's knowledge and expertise in the field. With a strong focus on network security, incident response, malware analysis, and vulnerability assessment, this certification exam ensures that candidates have a solid foundation in cybersecurity concepts and techniques.

ECCouncil 212-82 (Certified Cybersecurity Technician) Certification Exam is a globally recognized certification program designed to validate the technical skills and knowledge of cybersecurity professionals. 212-82 exam is intended for individuals who are responsible for ensuring the security of computer systems and networks, and who have experience in troubleshooting security issues, implementing security controls, and performing vulnerability assessments.

ECCouncil 212-82 Certification Exam covers various areas related to cybersecurity, such as network security, threat intelligence, incident response, and vulnerability management. 212-82 exam is intended for individuals who wish to pursue a career in cybersecurity or are already working in the field and want to validate their skills and knowledge. Certified Cybersecurity Technician certification exam is also suitable for IT professionals who want to add cybersecurity skills to their portfolio.

100% Pass ECCouncil - High-quality 212-82 Examcollection Questions Answers

The pass rate is 98.65% for 212-82 learning materials, and we have gained popularity in the international market due to the high pass rate. We also pass guarantee and money back guarantee if you buy 212-82 exam dumps. We will give the refund to your payment account. What's more, we use international recognition third party for the payment of 212-82 Learning Materials, therefore your money and account safety can be guaranteed, and you can just buying the 212-82 exam dumps with ease.

ECCouncil Certified Cybersecurity Technician Sample Questions (Q74-Q79):

NEW QUESTION # 74

in a security incident, the forensic investigation has isolated a suspicious file named "security_update.exe". You are asked to analyze the file in the Documents folder of the "Attacker Machine-1" to determine whether it is malicious. Analyze the suspicious file and identify the malware signature. (Practical Question)

- A. Conficker

- B. ZEUS
- C. KLEZ
- D. Stuxnet

Answer: D

Explanation:

Stuxnet is the malware signature of the suspicious file in the above scenario. Malware is malicious software that can harm or compromise the security or functionality of a system or network. Malware can include various types, such as viruses, worms, trojans, ransomware, spyware, etc. Malware signature is a unique pattern or characteristic that identifies a specific malware or malware family. Malware signature can be used to detect or analyze malware by comparing it with known malware signatures in databases or repositories. To analyze the suspicious file and identify the malware signature, one has to follow these steps:

Navigate to Documents folder of Attacker Machine-1.

Right-click on security_update.exe file and select Scan with VirusTotal option. Wait for VirusTotal to scan the file and display the results.

Observe the detection ratio and details.

The detection ratio is 59/70, which means that 59 out of 70 antivirus engines detected the file as malicious. The details show that most antivirus engines detected the file as Stuxnet, which is a malware signature of a worm that targets industrial control systems (ICS). Stuxnet can be used to sabotage or damage ICS by modifying their code or behavior. Therefore, Stuxnet is the malware signature of the suspicious file. KLEZ is a malware signature of a worm that spreads via email and network shares. KLEZ can be used to infect or overwrite files, disable antivirus software, or display fake messages. ZEUS is a malware signature of a trojan that targets banking and financial systems.

ZEUS can be used to steal or modify banking credentials, perform fraudulent transactions, or install other malware. Conficker is a malware signature of a worm that exploits a vulnerability in Windows operating systems. Conficker can be used to create a botnet, disable security services, or download other malware.

NEW QUESTION # 75

Paul, a computer user, has shared information with his colleague using an online application. The online application used by Paul has been incorporated with the latest encryption mechanism. This mechanism encrypts data by using a sequence of photons that have a spinning trait while traveling from one end to another, and these photons keep changing their shapes during their course through filters: vertical, horizontal, forward slash, and backslash.

Identify the encryption mechanism demonstrated in the above scenario.

- A. Quantum cryptography
- B. Rivest Shamir Adleman encryption
- C. Homomorphic encryption
- D. Elliptic curve cryptography

Answer: A

NEW QUESTION # 76

SecuraCorp, a leading financial institution, is worried about zero-day vulnerabilities. With a sprawling network infrastructure and multiple transaction points, it needs a system that does not solely rely on signatures but can effectively identify suspicious patterns based on the behavior in the network. Which type of IDS/IPS should SecuraCorp primarily deploy for its needs?

- A. Network-based IDS
- B. Signature-based IDS
- C. Anomaly-based IDS
- D. Host-based IDS

Answer: C

Explanation:

SecuraCorp needs an Intrusion Detection System (IDS) that can identify suspicious patterns based on behavior rather than relying solely on known signatures. Here's why an Anomaly-based IDS is the best fit:

* Anomaly-based IDS:

* Behavior Analysis: Detects deviations from normal network behavior, which is crucial for identifying zero-day vulnerabilities.

* Pattern Recognition: Uses machine learning and statistical methods to identify unusual patterns that might indicate malicious activity.

* Advantages: Effective against unknown threats and zero-day exploits because it does not rely on predefined signatures.

* Network-based IDS: Primarily monitors network traffic but often relies on signatures, making it less effective against unknown threats.

* Signature-based IDS: Relies on a database of known attack signatures, which is not sufficient for detecting new or unknown threats.

* Host-based IDS: Monitors individual systems but might not provide a comprehensive view of the network.

NEW QUESTION # 77

You are investigating a data leakage incident where an insider is suspected of using image steganography to send sensitive information to a competitor. You have also recovered a VeraCrypt volume file S3cr3t from the suspect. The VeraCrypt volume file is available in the Pictures folder of the Attacker Machine. Your task is to mount the VeraCrypt volume, find an image file, and recover the secret code concealed in the file. Enter the code as the answer. Hint:

If required, use sniffer@123 as the password to mount the VeraCrypt volume file. (Practical Question)

- A. G85E2C7AB1R6
- B. L76D2E8CBA1K
- C. J782C8C2EH6J
- D. H364F9F4FD3H

Answer: D

NEW QUESTION # 78

Walker, a security team member at an organization, was instructed to check if a deployed cloud service is working as expected. He performed an independent examination of cloud service controls to verify adherence to standards through a review of objective evidence. Further, Walker evaluated the services provided by the CSP regarding security controls, privacy impact, and performance.

Identify the role played by Walker in the above scenario.

- A. Cloud consumer
- B. Cloud provider
- C. Cloud carrier
- D. Cloud auditor

Answer: D

Explanation:

A cloud auditor is a role played by Walker in the above scenario. A cloud auditor is a third party who examines controls of cloud computing service providers. Cloud auditor performs an audit to verify compliance with the standards and expressed his opinion through a report⁸⁹. A cloud provider is an entity that provides cloud services, such as infrastructure, platform, or software, to cloud consumers¹⁰. A cloud carrier is an entity that provides connectivity and transport of cloud services between cloud providers and cloud consumers¹⁰. A cloud consumer is an entity that uses cloud services for its own purposes or on behalf of another entity

NEW QUESTION # 79

.....

This way you will get familiar with Certified Cybersecurity Technician exam pattern and objectives. No additional plugins and software installation are indispensable to access this 212-82 Practice Test. Furthermore, all browsers and operating systems support this version of the ECCouncil 212-82 practice exam.
