Also, our windows software support downloading for many times. What is more, you can install our CAD study materials on many computers. All of them can be operated normally. The three versions of CAD study materials are excellent. Just choose them as your good learning helpers.

ServiceNow CAD Certification Exam is an important certification for individuals who are looking to demonstrate their expertise in developing applications on the ServiceNow platform. CAD exam covers a range of topics and validates an individual's ability to develop applications using best practices and adhere to ServiceNow's development guidelines. Certified Application Developer-ServiceNow certification is recognized globally and is a valuable credential for individuals who are looking to advance their career in ServiceNow development.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q199-Q204):

NEW QUESTION # 199
Which Report Type(s) can be created by right-clicking on a column header in a table's list?

- A. Bar Chart
- B. Bar Chart, Pie Chart, and Histogram
- C. Bar Chart and Pie Chart
- D. Bar Chart, Pie Chart, Histogram, and Line

Answer: C

Explanation:
The Bar Chart and Pie Chart report types can be created by right-clicking on a column header in a table's list.
These report types show how individual pieces of data relate to the whole using proportional bars or slices.
You can also choose different aggregation methods such as count, sum, average, min, max, or percent.
Reference: [Create reports from lists]

NEW QUESTION # 200
Which of the following GuideRecord methods run a query against a database table?
Choose 3 answers

- A. runQuery()
- B. -query( )
- C. -get()
- D. query()
- E. get(

Answer: B,D,E

Explanation:

https://docs.servicenow.com/bundle/tokyo-application-development/page/app-store/dev_portal/API_reference/gl

NEW QUESTION # 201
Which determines the relationships between field in an Import Set table to field in an existing ServiceNow table?

- A. Business Service Management Map
- B. Transform Map
- C. Data Sources
- D. Schema Map Relationship Builder

Answer: B

Explanation:
A transform map determines the relationships between fields in an import set table and fields in an existing ServiceNow table. It also specifies how to transform the imported data before mapping it to the target table.
References:
* 1. What Exactly is an Import Set? - ServiceNow Developers
* Import set table - ServiceNow Application Development [Book]

NEW QUESTION # 202

When creating a table in a privately-scoped application, which four Access Controls are created for the table?

- A. Create, Delete, Read, Update
- B. Insert, Delete, Query, Update
- C. Create, Delete, Read, Write
- D. Insert, Delete, Query, Write

Answer: C

NEW QUESTION # 203

Which one of the following is true for GlideUser (g_user) methods?

- A. Can be used in Client Scripts and UI Policies only
- B. Can be used in Client Scripts, UI Policies, and UI Actions
- C. Can be used in Business Rules only
- D. Can be used in Business Rules, and Scripts Includes

Answer: B

Explanation:
The following is true for GlideUser (g_user) methods:
Can be used in Client Scripts, UI Policies, and UI Actions. This is true because GlideUser (g_user) methods are part of the client-side scripting APIs that provide information about the current user and the user's preferences. Client Scripts, UI Policies, and UI Actions are all types of client-side scripts that run in the web browser and manipulate the user interface.
The following are not true for GlideUser (g_user) methods:
Can be used in Client Scripts and UI Policies only. This is false because GlideUser (g_user) methods can also be used in UI Actions, which are another type of client-side scripts that can be triggered by a user's click on a button, link, or choice.
Can be used in Business Rules only. This is false because GlideUser (g_user) methods cannot be used in Business Rules, which are server-side scripts that run on the ServiceNow platform and manipulate the database. Business Rules use a different API to access the current user information, which is GlideSystem (gs).
Can be used in Business Rules, and Scripts Includes. This is false because GlideUser (g_user) methods cannot be used in Business Rules or Script Includes, which are both server-side scripts. Script Includes are reusable units of code that can be called from any server-side script. Script Includes also use GlideSystem (gs) to access the current user information. Reference: Client-Side Scripting APIs, GlideUser, Business Rules, Script Includes

NEW QUESTION # 204

......

Before clients purchase our Certified Application Developer-ServiceNow test torrent they can download and try out our product freely to see if it is worthy to buy our product.
