Salesforce Certified B2C Commerce Architect Sample Questions (Q31-Q36):

NEW QUESTION # 31

A Retailer has a single storefront site and a Product Management System (PIM). The PIM is Generating the master catalog and storefront categorization catalog every day and it uploading them to SFTP how should the Architect configure the import job flows following the best practices?

- A. 1st flow is global to download the files from SFTP. 2nd flow is global to import the storefront catalog 3rd flow K global to Import the master catalog.
- B. 1st flow is assigned to the site to download the files from SFTP. 2nd flow is assigned to the site to Import the storefront catalog 3rd flow It global to Import the master catalog.
- C. 1st flow is global to download the files from SFTP. 2nd flow is global to import the master catalog. 3rd flow Is global to Import the storefront catalog.
- D. 1st flow is assigned to the site to download the files from SFTP. 2nd flow is assigned to the site to Import the master catalog. 3rd flow K global to Import the storefront catalog.

Answer: A

Explanation:

For optimal job flow concerning data import from a PIM system, the sequence should begin with downloading files globally from an SFTP site, followed by importing data into the B2C Commerce platform:

* First flow: Download files, ensuring all required files are available and ready for import.

* Second flow: Import the storefront catalog which likely has dependencies on the master catalog but is generally smaller and can be updated more rapidly.

* Third flow: Import the master catalog, as it typically contains the foundational data needed for various site functionalities.

This sequence respects data dependency and integrity, ensuring that the storefront reflects the most current and accurate information after all relevant data is imported.

NEW QUESTION # 32

A new version of the Page Show controller is required for implementation of Page Designer specific look. It requires implementation of a specific, cache period for Page Designer pages, which is not currently available in the base Storefront Reference Architecture (SFRA) cache.js module. What two steps should the Architect instruct the developer to implement?

Choose 2 answers

- A. Create new cache.js in client's cartridge. Extend cache.js from app_storefront_base and add a function for the Page Designer caching.
- B. Create new Page.js controller in client's cartridge. Extend the code from base and prepend the new cache middleware function to Page-Show route.
- C. Create new cache.js in client's cartridge. Copy cache.js from app_storefront_base and add a function for the Page Designer caching.
- D. Create new Page.js controller in client's cartridge. Copy code from base and modify the Page-Show route to include the new cache middleware function.

Answer: A,B

NEW QUESTION # 33

The storefront integrates with a REST based Address verification service (AVS) that uses token based security. The sequence of calls in the API documentation for this AVS looks like the following

1. Client authentication call, which contains the merchantId and secret in a GET request and returns a token in the response.
2. Address verification call, which contains the token and the address to verify in a POST request.

Once the token is obtained, it is valid for hours and it is not needed to request a new one for subsequent address verification calls, the AVS charges for every request made no matter if it is client authentication call or address verification call.

Which three strategies could be applied to allow for efficient use of the service without compromising security? Choose 3 answers

- A. Obtain the token from local storage of the browser and update it once it expires.
- B. Obtain the token from a custom cache before making the client authentication call.
- C. Use a job to store and update the token in a custom object that is used from the storefront code.
- D. Apply page caching to the client authentication controller that is used with AJAX.
- E. Use HTTPService caching for the client authentication call.

Answer: C,D,E

NEW QUESTION # 34

A company manages its regional operations as separate businesses. The regional sites (Site A and Site B) operate with:

- * Separate realms
- * Deferent code bates
- * Different category navigation menus
- * Frequent updates on category structure

The requirement from the business is to provide hreflang link tags on category pages pointing to the same category on the other regional site. Example MTML for one of these links as displayed on Site A is:

Which solution should the Architect choose while keeping performance in mind?

- A. Create additional locales in al realms create a new custom attribute on the category that is localized. Populate the attribute with the other site URLs and use it to display the hreflang tag.
- **B. Create a new custom attribute on the Category. Populate the attribute with the other entire site URLs corresponding to locales In JSON Format. Use the attribute to display the hreflang link tag.**
- C. Create a new custom object type Populate the hreflang mapping for each category and locale in this custom object. Use the custom object to display the hreflang link tag.
- D. Create a custom Business Manager module. Ask the business to maintain the hreflang link tags for each regional site in this Business Manager module.

Answer: B

NEW QUESTION # 35
