Free PDF 2026 Trustable XSIAM-Analyst: Palo Alto Networks XSIAM Analyst Certification Dump

The Palo Alto Networks XSIAM-Analyst certification exam is one of the top-rated and valuable credentials in the Palo Alto Networks world. This Palo Alto Networks XSIAM Analyst XSIAM-Analyst exam questions is designed to validate the candidate's skills and knowledge. With Palo Alto Networks XSIAM-Analyst exam dumps everyone can upgrade their expertise and knowledge level. By doing this the successful Palo Alto Networks XSIAM-Analyst Exam candidates can gain several personal and professional benefits in their career and achieve their professional career objectives in a short time period.

Palo Alto Networks XSIAM-Analyst Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Alerting and Detection Processes: This section of the exam measures the skills of Security Analysts and focuses on recognizing and managing different types of analytic alerts in the Palo Alto Networks XSIAM platform. It includes alert prioritization, scoring, and incident domain handling. Candidates must demonstrate understanding of configuring custom prioritizations, identifying alert sources like correlations and XDR indicators, and taking corresponding actions to ensure accurate threat detection.

Topic 2	<ul style="list-style-type: none"> Threat Intelligence Management and ASM: This section of the exam measures the skills of Threat Intelligence Analysts and focuses on handling and analyzing threat indicators and attack surface management (ASM). It includes importing and managing indicators, validating reputations and verdicts, creating prevention and detection rules, and monitoring asset inventories. Candidates are expected to use the Attack Surface Threat Response Center to identify and remediate threats effectively.
Topic 3	<ul style="list-style-type: none"> Incident Handling and Response: This section of the exam measures the skills of Incident Response Analysts and covers managing the complete lifecycle of incidents. It involves explaining the incident creation process, reviewing and investigating evidence through forensics and identity threat detection, analyzing and responding to security events, and applying automated responses. The section also focuses on interpreting incident context data, differentiating between alert grouping and data stitching, and hunting for potential IOCs.

Palo Alto Networks XSIAM Analyst Sample Questions (Q72-Q77):

NEW QUESTION # 72

Which type of scan can be triggered on demand to check endpoints for malware within Cortex XSIAM?

Response:

- A. IOC validation scan
- B. Malware scan
- C. Forensic scan
- D. Behavioral risk scan

Answer: B

NEW QUESTION # 73

You're asked to implement a playbook for phishing response. Which two actions should the playbook automate?

Response:

- A. Remove suspicious email from mailboxes
- B. Retrieve and analyze the email header
- C. Run a password policy audit
- D. Isolate the sender's endpoint

Answer: A,B

NEW QUESTION # 74

During an investigation, an analyst runs the reputation script for an indicator that is listed as Suspicious. The new reputation results display in the War Room as Malicious; however, the indicator verdict does not change.

What is the cause of this behavior?

- A. The indicator has been excluded.
- B. The indicator verdict was manually set to Suspicious.
- C. The indicator exists as an IOC rule.
- D. The indicator is expired.

Answer: B

Explanation:

The correct answer is D - The indicator verdict was manually set to Suspicious.

When an indicator's verdict is manually set in Cortex XSIAM, automated reputation scripts and updates do not override this manual setting. Thus, even if the reputation result in the War Room reflects a higher risk (Malicious), the indicator's main verdict will not change until manually updated by an analyst.

"If an indicator's verdict is set manually, it will not be automatically updated by enrichment or reputation scripts. Manual verdicts must be changed by an analyst." Document Reference:XSIAM Analyst ILT Lab Guide.pdf Page:Page 37 (Threat Intel Management section)

NEW QUESTION # 75

You're reviewing suspicious IPs imported from VirusTotal. Which two XSIAM actions are valid next steps?

Response:

- A. Enrich incidents with the indicator
- B. Use syslog to flush logs
- C. Create a block rule
- D. Update browser cache

Answer: A,C

NEW QUESTION # 76

What is a schema in the context of XQL?

Response:

- A. A threat scoring mechanism
- B. A structured description of dataset fields and types
- C. A list of SOC policies
- D. A prebuilt playbook

Answer: B

NEW QUESTION # 77

.....
