### CompTIA Project+ Certification Exam Sample Questions (Q68-Q73):

#### NEW QUESTION # 68

A project team is working on a document to precisely describe the success criteria that should be fulfilled by a product. Which of the following documents is the team preparing?

- A. Quality plan
- B. Contract obligations
- C. Work breakdown structure
- D. Project scope

**Answer: D**

Explanation:

The project scope is the document that defines and describes the project objectives, deliverables, requirements, boundaries, assumptions, and constraints. It also includes the success criteria that should be fulfilled by the product or service to meet the stakeholder expectations and the business case. The success criteria are the measurable standards that indicate whether the project has achieved its intended results. The other options are not correct because:

A quality plan is the document that defines and describes the quality standards, policies, procedures, tools, and techniques that will be applied to the project to ensure that the deliverables meet the requirements and the success criteria.

Contract obligations are the terms and conditions that bind the parties involved in a contractual agreement, such as the project manager, the customer, the sponsor, and the vendor. Contract obligations specify the roles, responsibilities, deliverables, payments, and penalties of each party.

A work breakdown structure (WBS) is a graphical representation of the project scope that breaks down the deliverables into smaller and manageable components. A WBS shows the hierarchy and relationship of the project elements, but does not include the success criteria. #### NEW QUESTION # 69

During the project execution phase, Ann, a project manager, received an email from the project sponsor asking for an additional work package to be added to the project scope due to new legislation.

INSTRUCTIONS

Review the email with the latest updates sent by the project sponsor and respond in the following order:

1. Select the best tool for tracking the server migration progress.
2. Select the new critical path.

3. Select the correct number of engineers required for the server migration phase.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

Select the Appropriate Tool:

Select the new critical path.

Option A

Option B

Option C

**Answer:**

Explanation:

### NEW QUESTION # 70

In a functional organization, a project has been completed successfully. Which of the following actions would the project manager MOST likely perform?

- A. Allocate resources in a different project
- **B. Notify the functional manager that resources are released.**
- C. Obtain the final report from release management.
- D. Assemble a new project with existing resources.

**Answer: B**

Explanation:

Explanation

The project manager should notify the functional manager that resources are released after completing a project successfully in a functional organization. A functional organization is a type of organizational structure where employees are grouped by their functions or specialties, such as finance, marketing, or engineering. In a functional organization, the functional manager has more authority and control over the resources than the project manager. Therefore, the project manager should inform the functional manager when the resources are no longer needed for the project and can be reassigned to other tasks or projects.

### NEW QUESTION # 71

A company is implementing a new radar system from July to September. The project manager knows these months are the peak hurricane season for this region. Which of the following should the project manager develop to mitigate the risk to the project?

- A. Rollback plan
- **B. Contingency plan**
- C. Recovery plan
- D. Data plan

**Answer: B**

Explanation:

A contingency plan is a risk mitigation strategy that involves preparing alternative courses of action in case the original plan fails or encounters unexpected problems. A contingency plan can help reduce the impact of negative risks and ensure the project continuity and success. In this case, the project manager should develop a contingency plan to mitigate the risk of hurricanes affecting the implementation of the new radar system.

For example, the contingency plan could include backup resources, alternative locations, emergency procedures, and communication channels in case of a hurricane.
