No matter you are students, office workers or common people, you can have a try. In addition, you can take part in the EAEP2201 Exam if you finish all learning tasks. The certificate issued by official can inspire your enthusiasm.

## Esri Enterprise Administration Professional 2201 Sample Questions (Q35-Q40):

### NEW QUESTION # 35

An organization configures an ArcGIS Enterprise portal to allow single sign-on using Integrated Windows Authentication (IWA). Configuration includes:

\* All accounts in the Active Directory group gisusers are added to the portal  
\* Existing users can sign in without entering credentials However, new employees assigned to the same gisusers group cannot log in, create content, or join groups. What is causing this issue for the new employees?

- A. Their Active Directory accounts have been assigned an incompatible default user type
- B. The Web Adaptor cache must be cleared
- C. Their Active Directory accounts have not been added to the portal
- D. Their Active Directory accounts have not had sufficient time to sync to the portal

**Answer: C**

Explanation:

For IWA authentication, Active Directory users are not automatically added to the ArcGIS Enterprise portal. They must either be:

- \* Manually added as members, or
- \* Automatically created at first login if auto-creation is enabled.

Since the new users are assigned to the gisusers group but cannot sign in or create content, it's clear that their accounts have not yet been added to the portal.

From ArcGIS Enterprise documentation:

"Integrated Windows Authentication (IWA) allows users to sign in with their Windows credentials. However, users must still be members of the portal. You can manually add users or enable automatic account creation during login."

- \* Option B is invalid since default user type settings do not prevent login.
- \* Option C is incorrect because synchronization is not time-based-it's account-creation dependent.

Reference: ArcGIS Enterprise - Managing Portal Members and Identity Store Integration

### NEW QUESTION # 36

A GIS analyst is running raster analysis in the ArcGIS Enterprise portal Map Viewer. The input data is an image layer, but the output of the raster analysis is a feature layer.

Which ArcGIS Server will host the output feature service?

- A. ArcGIS Raster Analytics Server site
- B. ArcGIS Hosting Server site
- C. ArcGIS Image Hosting Server site

**Answer: B**

Explanation:

In ArcGIS Enterprise, when performing raster analysis that results in feature data (e.g., vector outputs), the ArcGIS Hosting Server is responsible for hosting the resulting feature services. The Raster Analytics Server processes the raster data, and the output is then stored in the ArcGIS Data Store associated with the Hosting Server, which subsequently serves the feature layer.

The Image Hosting Server is primarily used for hosting large imagery datasets and does not handle feature services. The Raster Analytics Server conducts the analysis but does not host the output services.

Reference Source: ArcGIS Enterprise documentation on configuring and deploying raster analytics

### NEW QUESTION # 37

A GIS administrator receives reports of slow-performing services and notices that disk space is filling up after recent troubleshooting sessions.

In those sessions, the following tasks were performed:

- \* Services added to the shared instance pool
- \* Log retention settings reduced
- \* Log level set to Debug
- \* ArcGIS Server machine restarted
- \* An additional ArcGIS Server site federated

What is causing this slow performance?

- A. Federating the additional ArcGIS Server site
- B. Adjusting the log level to Debug
- **C. Additional services in the shared instance pool**
- D. Restarting ArcGIS Server

**Answer: C**

### NEW QUESTION # 38

A GIS administrator works for the Department of Transportation. Users need to analyze decades of traffic and crash data to determine the interstates with the most incidents. They will also analyze when certain vehicles were speeding and braking, and then correlate this data with vehicular accident locations.

Which server must be configured to support this workflow?

- A. Notebook Server
- **B. GeoEvent Server**
- C. GeoAnalytics Server

**Answer: B**

### NEW QUESTION # 39

A client has an internet-accessible ArcGIS Enterprise deployment with the Web Adaptors in the DMZ, and the remaining components are on an internal network behind a firewall. A user on the internet must access a web map in that environment. Which ports must be open in the firewall between the DMZ and the internal network?

- **A. 6443 and 7443**
- B. 80 and 443
- C. 2443 and 6443
- D. 443 and 6443

**Answer: A**

Explanation:

Web Adaptors in the DMZ must forward requests to internal components (Portal and Server). These internal services operate over HTTPS via ports:

- \* 7443 for Portal for ArcGIS
- \* 6443 for ArcGIS Server

Therefore, the firewall must allow traffic over ports 6443 and 7443 from the Web Adaptors (DMZ) to the respective internal services.

From ArcGIS Enterprise security documentation:

"When using Web Adaptors in the DMZ, make sure ports 6443 and 7443 are open between the Web Adaptors and the internal ArcGIS Server and Portal components respectively."

- \* Option B is partially correct but leaves out Portal (7443).
- \* Option C is for HTTP/HTTPS access from the public, not internal communications.
- \* Option D includes the Data Store admin port (2443), which isn't required here.

### NEW QUESTION # 40

.....

Most of the candidates who plan to take the EAEP2201 certification exam lack updated practice questions to ace it on the first

attempt. Due to this, they fail the Enterprise Administration Professional 2201 (EAEP2201) test, losing money and time. And in some cases, applicants fail on the second attempt as well because they don't prepare with EAEP2201 Actual Exam questions. This results in not only the loss of resources but also the motivation of the candidate.
