Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator Sample Questions (Q12-Q17):

NEW QUESTION # 12
Which service is included in a secure access service edge (SASE) solution, but not in a security service edge (SSE) solution?
(Choose one answer)

- A. ZTNA
- B. SWG
- C. CASB
- D. SD-WAN1

Answer: D

Explanation:
The distinction between SASE (Secure Access Service Edge) and SSE (Security Service Edge) is a fundamental architectural concept in modern networking and security.
* SASE Definition: SASE is a comprehensive framework that converges networking capabilities (specifically SD-WAN) with cloud-native security services (SSE) into a single, unified service model.
* SSE Definition: SSE represents the security-focused subset of SASE.4 It encompasses the core security pillars required for secure access, including Secure Web Gateway (SWG), Cloud Access Security Broker (CASB), and Zero Trust Network Access (ZTNA).
* The Key Differentiator: While both solutions share the same security stack (SWG, CASB, ZTNA), SD-WAN (Software-Defined Wide Area Network) is the specific networking component that exists in a full SASE solution to provide intelligent path selection and optimized connectivity. SSE intentionally excludes these wide-area networking functions, focusing purely on the security service delivery layer.
According to the FortiSASE 25 Enterprise Administrator Study Guide, organizations that already have a robust networking infrastructure and only require a cloud-delivered security overlay would opt for SSE, whereas those seeking a complete transformation of both network and security would deploy a full SASE solution that includes SD-WAN.

NEW QUESTION # 13
An organization needs to resolve internal hostnames using its internal rather than public DNS servers for remotely connected endpoints. Which two components must be configured on FortiSASE to achieve this?
(Choose two.)

- A. Split tunnelling destinations
- B. SSL deep inspection
- C. DNS filter
- D. Split DNS rules

Answer: A,D

Explanation:
To resolve internal hostnames using internal DNS servers for remotely connected endpoints, the following two components must be configured on FortiSASE:
* Split DNS Rules:
* Split DNS allows the configuration of specific DNS queries to be directed to internal DNS servers instead of public DNS servers.
* This ensures that internal hostnames are resolved using the organization's internal DNS infrastructure, maintaining privacy and accuracy for internal network resources.
* Split Tunneling Destinations:
* Split tunneling allows specific traffic (such as DNS queries for internal domains) to be routed through the VPN tunnel while other traffic is sent directly to the internet.
* By configuring split tunneling destinations, you can ensure that DNS queries for internal hostnames are directed through the VPN to the internal DNS servers.
References:
FortiOS 7.6 Administration Guide: Provides details on configuring split DNS and split tunneling for VPN clients.

NEW QUESTION # 14

Which statement best describes the Digital Experience Monitor (DEM) feature on FortiSASE? (Choose one answer)

- A. It gathers all the vulnerability information from all the FortiClient endpoints.
- B. It provides end-to-end network visibility from all the FortiSASE security PoPs to a specific SaaS application.
- C. It monitors the FortiSASE POP health based on ping probes.
- D. It is used for performing device compliance checks on endpoints.

Answer: B

Explanation:

The Digital Experience Monitor (DEM) feature in FortiSASE is a specialized monitoring tool integrated into the SASE cloud to ensure optimal application performance and user satisfaction.2
* Purpose and Visibility: DEM is designed to provide end-to-end network visibility by monitoring the health and performance of the connections between the global FortiSASE security Points of Presence (PoPs) and specific SaaS applications (such as Microsoft 365, WebEx, or Dropbox).
* Performance Metrics: It identifies and helps troubleshoot issues related to latency, jitter, and packet loss. By leveraging vantage points within the SASE infrastructure, administrators can determine if a performance bottleneck resides within the local network, the SASE backbone, or the SaaS provider's environment.
* Integration: This feature is often powered by FortiMonitor, allowing for synthetic transaction monitoring (STM) to simulate user interactions and proactively spot performance issues before they impact the hybrid workforce.
* Operational Efficiency: By providing comprehensive insights across users and PoPs, DEM reduces the time required to resolve "slowness" complaints, which are common in remote work scenarios.
Comparison of Other Features:
* Option A: While FortiSASE monitors PoP health, DEM's primary value is the end-to-end path to the application.
* Option B: Compliance checks are a function of Endpoint Profiles and ZTNA tagging rules, not the monitoring dashboard.
* Option D: Vulnerability management is handled by the Vulnerability Scan feature within the managed FortiClient settings.

NEW QUESTION # 15

What are the two key features and benefits of Fortinet SOCaaS when integrated with FortiSASE? (Choose two answers)

- A. Fortinet SOCaaS offers monitoring only during standard business hours, uses AI without human analysis, and provides annual reports without dashboards or FortiSASE integration.
- B. Fortinet SOCaaS provides 24x7x365 cloud-based monitoring by Fortinet experts using AI, machine learning, and human analysis.
- C. Fortinet SOCaaS monitors only remote users, does not support log forwarding, and provides threat notifications without response guidance or expert meetings.
- D. Fortinet SOCaaS is a standalone service that monitors only FortiGate environments, provides automated patching without human analysis, and does not integrate with FortiSASE.
- E. Fortinet SOCaaS allows for consistent security monitoring through log forwarding, offers rapid threat notifications and response guidance, and includes intuitive dashboards.

Answer: B,E

Explanation:

Integrating Fortinet SOCaaS (Security Operations Center as a Service) with FortiSASE provides a managed extension of your security team, combining automated AI/ML-driven triage with human expertise to secure remote and on-premises users.
* Consistent Security Monitoring and Dashboards (C): Fortinet SOCaaS ensures that your security posture remains robust through seamless integration. This is achieved by configuring FortiSASE to forward pertinent security logs to the SOCaaS cloud, ensuring that analysts have the necessary data to detect anomalies across your network. The service provides verified threat notifications with detailed response guidance and mitigation recommendations. Furthermore, a built-in portal offers intuitive dashboards to track threats and manage escalated alerts.
* 24x7x365 Expert-Led Monitoring (D): This feature addresses the cybersecurity skills gap by providing around-the-clock vigilance. A global team of Fortinet Security Analysts works 24x7x365 to monitor logs and investigate events. The platform leverages AI and Machine Learning for automated alert triage, while human experts perform in-depth analysis to eliminate false positives and validate threats.
* Operational Efficiency: By offloading tedious manual work and triage to Fortinet experts, your internal security team can reduce burnout and focus on higher-value tasks while maintaining a superior security posture for both SASE and on-premises environments.

Refer to the exhibit. A customer needs to implement device posture checks for their remote endpoints while accessing the protected server. They also want the TCP traffic between the remote endpoints and the protected servers to be processed by FortiGate.

In this scenario, which two setups will achieve these requirements? (Choose two.)
- A. Configure FortiGate as a zero trust network access (ZTNA) access proxy.
- B. Configure private access policies on FortiSASE with ZTNA.
- C. Configure ZTNA servers and ZTNA policies on FortiGate.
- D. Configure ZTNA tags on FortiGate.

Answer: A,C

Explanation:

To enforce device posture checks and ensure that TCP traffic flows through FortiGate, the FortiGate must act as a ZTNA access proxy and host the ZTNA servers and policies. This setup allows posture validation via FortiSASE while routing traffic securely to protected servers through FortiGate.
