Appian ACD201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.
Topic 2	<ul style="list-style-type: none">Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.
Topic 3	<ul style="list-style-type: none">Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.
Topic 4	<ul style="list-style-type: none">Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.

Appian Senior Developer Sample Questions (Q22-Q27):

NEW QUESTION # 22

Which step should you perform to identify expression rules that have been causing or have caused performance issues in the past 30 days?

- A. Examine the application server log
- B. Navigate to the Admin Console > Rule Performance tab.**
- C. Monitor the runtime of all test cases.

Answer: B

Explanation:

The Admin Console > Rule Performance tab provides metrics and insights on expression rules that have caused performance issues in the past 30 days, allowing you to identify and address slow-running rules.

NEW QUESTION # 23

You need to display information for pending tasks for each individual in an application. The tasks may be for a single specific application.

Which context type should you select for the Task Report Type?

- A. Tasks by process model
- B. Tasks attributed to user**
B Tasks by process

Answer: B

Explanation:

"Tasks attributed to user" is the correct context type, as it allows you to display pending tasks assigned to each individual in the application.

NEW QUESTION # 24

You need to update an existing Appian application.

The application needs to be responsive and compatible with a variety of screen widths. For example: phone /tablet browser, Appian mobile app, desktop monitor.

Which two functions/parameters should you consider when updating the interfaces? (Choose two.)

- A. `a!isPageWidth()`
- B. `stackWhen` in Columns Layout and Side By Side Layout
- C. `a!isNativeMobile()`
- D. Width of a page in the site object

Answer: B,C

Explanation:

The `stackWhen` parameter in layout components helps interfaces adapt to different screen sizes by controlling when columns or side-by-side layouts stack vertically.

The `a!isNativeMobile()` function detects if the interface is being viewed on a native mobile app, allowing you to tailor the interface for mobile responsiveness.

NEW QUESTION # 25

Your development team has selected Jenkins as a Continuous Integration (CI) system to integrate testing of Appian into your overall testing strategy.

What should you do to set up automated testing of expression rules using Jenkins?

Note: To answer, move all steps from the Options list to the Answer List area and arrange them in the correct order.

Test the end-to-end functionality of the created web APIs.	
Create and test a web API with the <code>a!testRunStatusForId()</code> function.	
Create and test a web API with the <code>a!testRunResultForId()</code> function.	
Create and test a web API with the <code>a!startRuleTestsApplications()</code> function.	
Create a new Appian application for "Continuous_Integration".	

Answer:

Explanation:

NEW QUESTION # 26

What are two advantages of database normalization? (Choose two.)

- A. Minimizing data redundancy.
- B. Simplifying query statements to read data.
- C. Enforcing data integrity.
- D. Minimizing the number of tables that need to be created.

Answer: A,C

Explanation:

Database normalization enforces data integrity by structuring data and relationships to prevent anomalies.

It minimizes data redundancy by ensuring each piece of information is stored only once, reducing duplication.

NEW QUESTION # 27

.....
