Juniper JN0-481 Exam | JN0-481 Test Simulator Fee - One Year Free

Updates of Practice JN0-481 Tests

There are a lot of the functions on our JN0-481 exam questions to help our candidates to reach the best condition before they take part in the real exam. I love the statistics report function and the timing function most. The statistics report function helps the learners find the weak links and improve them accordingly. The timing function of our JN0-481 training quiz helps the learners to adjust their speed to answer the questions and keep alert and our JN0-481 study materials have set the timer.

Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q60-Q65):

NEW QUESTION # 60

You are receiving cable, interface, and BGP anomalies from several devices within the data center fabric. In Juniper Apstra, how would you troubleshoot these types of errors?

- A. In the UI, go to Devices and confirm that agent connectivity is fine.
- **B. In the UI, verify device connectivity by consulting the cable map.**
- C. In the UI, go to Time Voyager and revert to the last working version.
- D. In the UI, access the console to the devices and review the interface states.

Answer: B

Explanation:

The cable map is a graphical representation of the physical connections between the devices in the data center fabric. It shows the status of the cables, interfaces, and BGP sessions for each device. You can use the cable map to identify and troubleshoot any cable, interface, or BGP anomalies that may occur in the fabric. You can also filter the cable map by device name, device type, device role, device state, cable state, interface state, or BGP state.

NEW QUESTION # 61

You want to make a widget appear on the main dashboard in Juniper Apstra

- **A. Widgets automatically appear on the blueprint dashboard.**
- B. In this scenario, which statement is correct?
- C. Set the Default toggle switch to On for the desired widget.
- D. When creating the widget, select the Add to Blueprint Dashboard option.
- E. On the blueprint dashboard, click on the Add Widget option.

Answer: A

Explanation:

In Juniper Apstra, a widget is a graphical element that displays data from an intent-based analytics (IBA) probe. A widget can be used to monitor different aspects of the network and raise alerts to any anomalies. A widget can be viewed by itself or added to an analytics dashboard. A dashboard is a collection of widgets that can be customized and organized according to the user's preference. The main dashboard in Juniper Apstra is the blueprint dashboard, which is the default view that shows the network information and configuration for the active blueprint. A blueprint is a logical representation of the network design and intent. The blueprint dashboard can display the system-generated dashboards, the user-generated dashboards, and the individual widgets that are relevant to the network.

To make a widget appear on the main dashboard in Juniper Apstra, the user needs to set the Default toggle switch to On for the desired widget. This will add the widget to the blueprint dashboard, where it can be viewed along with other network information. The user can also remove the widget from the blueprint dashboard by setting the Default toggle switch to Off for the widget.

NEW QUESTION # 62

You have recently committed a change after creating a new blueprint in Juniper Apstra. In the main dashboard, you see a number of anomalies related to BGR. What is a likely cause of these anomalies?

- **A. The fabric has not converged yet.**
- B. You have misconfigured ASNs.
- C. Spine-leaf links are incorrectly set.
- D. A generic system has not been configured.

Answer: A

Explanation:

In Juniper Apstra, a blueprint is a logical representation of the network design and configuration.

When you create a new blueprint, you need to commit the changes to apply them to the network devices. However, committing the changes does not mean that the network is immediately updated and operational. It may take some time for the network to converge and reflect the new state of the blueprint. During this time, you may see some anomalies related to BGP in the main dashboard, which indicate that the BGP sessions are not established or stable between the devices. These anomalies are usually temporary and will disappear once the network converges and the BGP sessions are up and running.

NEW QUESTION # 63

What is the function of the Revert button in the Juniper Apstra UI?

- A. The Revert button performs a rollback 0 on Juniper devices in the fabric.
- **B. The Revert button deletes any uncommitted changes within Apstra.**
- C. The Revert button will rollback to the previous configuration of a specified device.
- D. The Revert button will undo the last change made to the configuration.

Answer: B

Explanation:

The Revert button is located on the Uncommitted tab of the blueprint page. The Uncommitted tab shows the changes that have been staged but not yet committed to the network. The Revert button allows you to discard any uncommitted changes and revert to the last committed state of the blueprint. This is useful if you want to cancel the changes that you have made or if you want to start over with a fresh slate.

NEW QUESTION # 64

How does Intent-Based Analytics align with the principles of intent-based networking in terms of data exploration and analysis?

- **A. By facilitating dynamic queries for intent-based data exploration**
- B. By providing real-time weather updates for the data center location
- C. By predicting future changes in the network environment
- D. By managing employee property allocations in the data center

Answer: A

NEW QUESTION # 65

.....

JN0-481 study dumps have a pass rate of 98% to 100% because of the high test hit rate. So our exam materials are not only effective but also useful. If our candidates have other things, time is also very valuable. It is very difficult to take time out to review the JN0-481 Exam. But if you use JN0-481 exam materials, you will learn very little time and have a high pass rate. Our JN0-481 study materials are worthy of your trust.
