Huawei HCSA-Presales-Storage V4.0 Sample Questions (Q295-Q300):

NEW QUESTION # 295

Which of the following scenarios does NAS Write Once Read Many (WORM) apply to? (Choose all that apply.)

- A. E-contracts
- B. Data archiving
- C. Online exams
- D. Database

Answer: A,B,C

Explanation:

NAS WORM is designed for scenarios that require data to be written once and protected from modification or deletion for a defined retention period. This makes it ideal for data archiving, e- contract preservation, and online exam records, all of which require immutable, audit-compliant storage. Databases are not suitable because they require frequent updates and deletions, which WORM does not allow.

NEW QUESTION # 296

Which of the following RAID technologies provides the highest space utilization for a RAID group with 10 disks? (Choose all that apply.)

- A. RAID 1
- **B. RAID 6 (8D+2P)**
- C. RAID TP (7D+3P)
- **D. RAID 5 (9D+1P)**

Answer: B,D

Explanation:

RAID 5 (9D+1P) provides the highest space utilization among the options because it uses only one parity disk, resulting in 90% usable space in a 10-disk setup. RAID 6 (8D+2P) also has high space utilization, providing 80% usable space with two parity disks, which adds extra fault tolerance compared to RAID 5. RAID TP (Triple Parity) and RAID 1 offer lower space utilization due to the higher number of parity disks and mirroring requirements, respectively.

NEW QUESTION # 297

Post-process deduplication and compression are more suitable for SSD storage.

- A. TRUE
- **B. FALSE**

Answer: B

Explanation:

Inline deduplication and compression are generally more suitable for SSD storage because they reduce the amount of data written to the SSDs in real-time, extending the lifespan of the SSDs and improving performance. Post-process deduplication and compression, on the other hand, are performed after data is written, which can increase write amplification and reduce SSD lifespan, making them less ideal for SSD storage.

NEW QUESTION # 298

Which CPU model does OceanStor 5300 F V5 use, Intel or ARM?

- **A. Intel**
- B. ARM

Answer: A

NEW QUESTION # 299

Which of the following domain controller systems is supported by the SMB protocol?

- A. LDAP
- **B. Active Directory**
- C. NIS

Answer: B

Explanation:

The SMB protocol supports integration with Microsoft Active Directory, which provides authentication, authorization, and directory services for Windows-based network environments.
