Brain Category-7A-General-and-Household-Pest-Control Exam - Category-7A-General-and-Household-Pest-Control Reliable Torrent

Many exam candidates attach great credence to our Category-7A-General-and-Household-Pest-Control simulating exam. You can just look at the hot hit on our website on the Category-7A-General-and-Household-Pest-Control practice engine, and you will be surprised to find it is very popular and so many warm feedbacks are written by our loyal customers as well. Our Category-7A-General-and-Household-Pest-Control study prep does not need any ads, their quality has propaganda effect themselves. As a result, the pass rate of our Category-7A-General-and-Household-Pest-Control exam braindumps is high as 98% to 100%.

OCPE Pesticide Applicator Category 7A General and Household Pest Control Exam Sample Questions (Q15-Q20):

NEW QUESTION # 15

A commercial pesticide applicator certified in category 7A:

- A. Can treat turf and ornamental areas for ticks and fleas
- B. Is not allowed to treat turf and ornamental areas of a property
- C. Can treat turf and ornamental areas of a property for bedbugs and grubs

Answer: A

Explanation:

Category 7A (General and Household Pest Control) includes applying pesticides to control pests like ticks and fleas inside and outside structures, including turf and ornamental areas immediately adjacent to the structure (e.g., lawns or gardens). The General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 1: Scope of Category 7A) confirms this scope. Option A is incorrect because bedbugs are indoor pests, and grubs require Category 3B (Turf Pest Control) certification. Option B is incorrect, as 7A applicators can treat outdoor areas for certain pests like ticks and fleas.

NEW QUESTION # 16

The yellow jacket is a:

- A. Social wasp usually nesting in the ground
- B. Ant with wings
- C. Solitary wasp nesting in the ground
- D. Social bee usually nesting in trees

Answer: A

Explanation:

Yellow jackets are social wasps that typically nest in the ground, often in abandoned rodent burrows or other cavities. They live in colonies with a queen and workers, as described in the General Pest Management: Guide for Commercial Applicators - Category 7A(Chapter 7: Wasps). Option B (social bee) is incorrect, as yellow jackets are wasps, not bees, and they do not typically nest in trees. Option C (solitary wasp) is incorrect, as yellow jackets are social. Option D (ant with wings) is incorrect, as yellow jackets are distinct from ants.

NEW QUESTION # 17

Mites are related to ticks; the itch mite and follicle mite are a problem for man and:

- A. Diagnosis and control should be done by a physician
- B. Require the use of residual pesticides for their control
- C. Are poisonous

Answer: A

Explanation:

Itch mites (e.g., scabies) and follicle mites (e.g., Demodex) affect humans and are medical concerns, not structural pest issues. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7: Mites) advises that diagnosis and control should be done by a physician, as these mites require medical treatment (e.g., prescription creams). Option A (are poisonous) is incorrect, as they are not poisonous but cause irritation. Option C (residual pesticides) is not appropriate, as these are human parasites, not structural pests.

NEW QUESTION # 18

Should a pesticide spill contaminate the soil, the DEP Pesticide Control Program should be contacted at:

- A. 0
- B. 1-800 CALLDEP
- C. 1-877 WARNDEP

Answer: C

Explanation:

The NJDEP Pesticide Control Program provides a hotline for reporting pesticide spills or emergencies: 1-877-WARNDEP (1-877-927-6337). This number is used to report incidents like soil contamination from a pesticide spill, ensuring proper response and mitigation. Option A (1-800-CALLDEP) is not the correct hotline number. Option C (911) is for immediate life-threatening emergencies, not specific pesticide spill reporting, though it may be used in extreme cases.

NEW QUESTION # 19

For non-powered particulate filters, which letter represents the most resistance to oil degradation?

- A. P
- B. R
- C. N

Answer: A

Explanation:

Non-powered particulate filters are classified by NIOSH with letters indicating oil resistance: N (not resistant to oil), R (resistant to oil), and P (oil-proof, most resistant to oil degradation). The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 3: Pesticide Safety) explains that P filters offer the highest resistance to oil degradation, making them suitable for environments where oil-based aerosols may be present. Option A (N) offers no oil resistance, and Option C (R) offers moderate resistance but not as much as P.

NEW QUESTION # 20

.....

We will offer the preparation for the Category-7A-General-and-Household-Pest-Control training materials, we will also provide you the guide in the process of using.
