Which FortiGate is the primary?

- A. HQ-NGFW-2 with the parameter priority setting
- **B. HQ-NGFW-1 with the parameter override setting**
- C. HQ-NGFW-2 with the parameter memory-failover-threshold setting
- D. HQ-NGFW-1 with the parameter memory-failover-flip-timeout setting

Answer: B

Explanation:

The HA configuration shows that override is disabled (set override disable), but despite this, HQ-NGFW-1 has the higher priority (200) and is acting as the primary, as indicated by its higher resource usage and uptime. Override allows the device with higher priority to take over as primary, so HQ-NGFW-1 is the primary device.
