## Salesforce Certified MuleSoft Integration Associate Exam Sample Questions (Q40-Q45):

### NEW QUESTION # 40

A developer is examining the responses from a RESTful web service that is compliant with the Hypertext Transfer Protocol (HTTP/1.1) as defined by the Internet Engineering Task Force (IETF).

In this HTTP/1.1-compliant web service, which class of HTTP response status codes should be specified to indicate when client requests are successfully received, understood and accepted by the web service?

- A. 5xx
- B. 4xx
- C. 2xx
- D. 3xx

Answer: C

### NEW QUESTION # 41

Which Exchange asset type represents a complete API specification in RAML or OAS format?

- A. Connectors
- **B. REST APIs**
- C. SOAP APIs
- D. API Spec Fragments

**Answer: B**

Explanation:

In Anypoint Exchange, a REST API asset represents a complete API specification in RAML (RESTful API Modeling Language) or OAS (OpenAPI Specification) format. Here's a detailed explanation:

\* REST APIs:

\* Definition: REST APIs are application programming interfaces that adhere to the principles of REST, allowing interaction with RESTful web services.

\* Specifications: Typically defined using RAML or OAS to describe the API's endpoints, methods, request/response structures, and security protocols.

\* Asset Types in Anypoint Exchange:

\* REST APIs: Represent the full API specification, including all necessary details for developers to understand and use the API.

\* SOAP APIs: Define APIs following the SOAP protocol, often using WSDL.

\* Connectors: Provide pre-built connectivity to various systems and services.

\* API Spec Fragments: Reusable pieces of an API specification, such as data types or security schemes, that can be included in full API specifications.

\* Usage:

\* Discoverability: Developers can easily discover, review, and reuse these API specifications in their projects.

\* Documentation: Provides comprehensive documentation generated from the API specification, ensuring consistency and clarity.

\* RAML and OAS: RAML, OpenAPI

### NEW QUESTION # 42

An application load balancer routes requests to a RESTful web API secured by Anypoint Flex Gateway Which protocol is involved in the communication between the load balancer and the Gateway?

- A. SMTP
- B. LDAP
- **C. HTTPS**
- D. SFTP

**Answer: C**

Explanation:

In scenarios where an application load balancer routes requests to a RESTful web API secured by Anypoint Flex Gateway, HTTPS is the protocol used. Here's a detailed explanation:

\* HTTPS Protocol:

\* Definition: HTTPS (HyperText Transfer Protocol Secure) is an extension of HTTP that provides secure communication over a computer network.

\* Encryption: It uses SSL/TLS to encrypt the data exchanged between the client and server, ensuring privacy and data integrity.

\* Load Balancer to Gateway Communication:

\* Secure Communication: The load balancer routes incoming requests to the API Gateway using HTTPS, ensuring that the data is encrypted and secure.

\* Standard Practice: HTTPS is the standard protocol for securing API communications, protecting against eavesdropping and man-in-the-middle attacks.

### NEW QUESTION # 43

According to MuleSoft a synchronous invocation of a RESTful API using HTTP to get an individual customer record from a single system is an example of which system integration interaction pattern?

- A. Batch
- B. Multicast
- C. One-way
- **D. Request-Reply**

**Answer: D**

Explanation:

In system integration, different interaction patterns are used depending on the communication requirements between systems. For a synchronous invocation of a RESTful API using HTTP to get an individual customer record from a single system, the Request-Reply pattern is used. Here's a detailed explanation:

\* Request-Reply Pattern:

\* Definition: This pattern involves a client sending a request to a server and waiting for a reply.

The communication is synchronous, meaning the client waits for the server to process the request and send back the response.

\* Typical Use Case: It is used when immediate feedback is required from the server, such as retrieving a specific customer record.

\* RESTful API and HTTP:

\* Synchronous Communication: HTTP is inherently synchronous, making it suitable for Request-Reply interactions where the client expects an immediate response.

\* Data Retrieval: Commonly used for GET requests in RESTful APIs to retrieve data from a server.

\* Example:

\* Scenario: A client application requests customer details by making a GET request to a RESTful API endpoint. The server processes the request and returns the customer record.

### NEW QUESTION # 44

According to MuleSoft which deployment characteristic applies to a microservices application architecture?

- **A. Services exist as independent deployment artifacts and can be scaled independently of other services**
- B. All services of an application can be deployed together as single Java WAR file
- C. Core business capabilities are encapsulated in a single deployable application
- D. A deployment to enhance one capability requires a redeployment of all capabilities

**Answer: A**

Explanation:

Microservices architecture is designed to enhance flexibility, scalability, and maintainability by decomposing applications into small, independent services. Here's a detailed explanation:

\* Independent Deployment:

\* Definition: Each microservice is developed, deployed, and managed independently. This allows teams to work on different services without interfering with each other.

\* Scalability: Services can be scaled independently based on demand, improving resource utilization and system resilience.

\* Benefits:

\* Flexibility: Enhances the ability to update or scale specific parts of an application without affecting the whole system.

\* Resilience: Isolates failures to individual services, preventing cascading failures across the entire application.

\* Technology Diversity: Allows the use of different technologies and languages best suited for each service.
