Getting ready for CheckPoint 156-315.81 exam, do you have confidence to sail through the certification exam? Don't be afraid. Test4Cram can supply you with the best practice test materials. And Test4Cram CheckPoint 156-315.81 ExamDumps is the most comprehensive exam materials which can give your courage and confidence to pass 156-315.81 test that is proved by many candidates.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q374-Q379):

NEW QUESTION # 374

Which command can you use to enable or disable multi-queue per interface?

- A. Cpmq config
- B. Cpmqueue set
- C. cpmq set
- D. St cpmq enable

Answer: C

Explanation:

The cpmq set command enables or disables multi-queue per interface. Multi-queue is a feature that allows distributing the network traffic among several CPU cores, improving the throughput and performance of the Security Gateway. Reference: Multi-Queue

NEW QUESTION # 375

In Logging and Monitoring, the tracking options are Log, Detailed Log and Extended Log. Which of the following options can you add to each Log, Detailed Log and Extended Log?

- A. Accounting
- B. Suppression
- C. Accounting/Extended
- D. Accounting/Suppression

Answer: D

NEW QUESTION # 376

Which is the command to identify the NIC driver before considering about the employment of the Multi-Queue feature?

- A. show interface eth0 mq
- B. ifconfig -i eth0 verbose
- C. ip show Int eth0
- D. ethtool A eth0

Answer: A

NEW QUESTION # 377

What are the correct steps upgrading a HA cluster (M1 is active, M2 is passive) using Multi-Version Cluster (MVC) Upgrade?

- 1) Enable the MVC mechanism on both cluster members cphaprob mvc on
- 2) Upgrade the passive node M2 to R81.20
- 3) In SmartConsole, change the version of the cluster object

- 4) Install the Access Control Policy and make sure that the installation will not stop if installation on one cluster member fails
 - 5) After examine the cluster states upgrade node M1 to R81.20
 - 6) On each Cluster Member, disable the MVC mechanism
- B. 1) Upgrade the passive node M2 to R81.20
2) Enable the MVC mechanism on the upgraded R81.20 Cluster Member M2 `tcpphaconf mvc on`
3) In SmartConsole, change the version of the cluster object 4) Install the Access Control Policy
5) After examine the cluster states upgrade node M1 to R81.20
6) On each Cluster Member, disable the MVC mechanism and Install the Access Control Policy upgrade the passive node M2 to R81.20
 - C. 1) In SmartConsole. change the version of the cluster object
2) Upgrade the passive node M2 to R81.20
3) Enable the MVC mechanism on the upgraded R81.20 Cluster Member M2 `Wcphaconf mvc on`
4) Install the Access Control Policy and make sure that the installation will not stop if installation on one cluster member fails
5) After examine the cluster states upgrade node M1 to R81.20
6) On each Cluster Member, disable the MVC mechanism and Install the Access Control Policy SmartConsole. change the version of the cluster object
 - D. 1) Enable the MVC mechanism on both cluster members `#cphaprob mvc on`
2) Upgrade the passive node M2 to R81.20
3) In SmartConsole. change the version of the cluster object
4) Install the Access Control Policy
5) After examine the cluster states upgrade node M1 to R81.20
6) On each Cluster Member, disable the MVC mechanism and Install the Access Control Policy

Answer: B

Explanation:

The correct steps for upgrading a HA cluster using MVC are as follows:

- * Upgrade the passive node M2 to R81.20 using CPUSE or CLI.
- * Enable the MVC mechanism on the upgraded R81.20 Cluster Member M2 using the command `cphaconf mvc on`.
- * In SmartConsole, change the version of the cluster object to R81.20.
- * Install the Access Control Policy and make sure that the installation will not stop if installation on one cluster member fails.
- * After examining the cluster states, upgrade node M1 to R81.20 using CPUSE or CLI.
- * On each Cluster Member, disable the MVC mechanism using the command `cphaconf mvc off` and install the Access Control Policy.

NEW QUESTION # 378

What is the difference between SSL VPN and IPSec VPN?

- A. SSL VPN and IPSec VPN are the same.
- B. IPSec VPN does not require installation of a resilient VPN client.
- C. SSL VPN requires installation of a resident VPN client.
- D. IPSec VPN requires installation of a resident VPN client and SSL VPN requires only an installed Browser.

Answer: D

Explanation:

The main difference between SSL VPN (Secure Sockets Layer Virtual Private Network) and IPSec VPN (Internet Protocol Security Virtual Private Network) is in the way they operate:

SSL VPN typically does not require the installation of a resident VPN client. It often relies on a web browser to establish the VPN connection, making it more convenient for remote users who may not want to install dedicated VPN software.

IPSec VPN, on the other hand, often requires the installation of a resident VPN client on the user's device to establish the VPN connection. This client software is necessary for configuring and managing the VPN connection.

Option C, stating that SSL VPN and IPSec VPN are the same, is incorrect because they have distinct characteristics as described above.

Option A is incorrect because it inaccurately suggests that IPSec VPN does not require a resident VPN client, which is not true in most cases.

Option B is incorrect because it wrongly claims that SSL VPN requires the installation of a resident VPN client.

NEW QUESTION # 379

.....

Closed cars will not improve, and when we are reviewing our qualifying 156-315.81 examinations, we should also pay attention to the overall layout of various qualifying examinations. For the convenience of users, our 156-315.81 learn materials will be timely updated information associated with the qualification of the home page. Our 156-315.81 Certification material get to the exam questions can help users in the first place. Users can learn the latest and latest test information through our 156-315.81 test preparation materials. What are you waiting for?
