### NEW QUESTION # 135

Which of the following most accurately defines what group counselors mean by the term clarifying?

- A. offering plausible explanations for certain behaviors
- **B. helping members sort through conflicting feelings**
- C. encouraging clients to assess problems realistically

**Answer: B**

Explanation:

In group counseling, clarifying involves helping members sort through and articulate their thoughts and conflicting feelings. This process assists members in gaining a clearer understanding of themselves and the issues they are facing, which supports more effective group work and personal growth. "Clarifying is used by counselors to assist clients or group members in sorting through confusion, particularly when they have conflicting feelings or thoughts." Reference: Helwig, A. A. (2020). CPCE Study Guide and Review; Corey, G. (2016). Theory and Practice of Group Counseling (9th Edition).

### NEW QUESTION # 136

What is the most common basis for the concept of race?

- A. ethnicity
- B. genotype
- C. phenotype

**Answer: C**

Explanation:

The most common basis for the concept of race is phenotype, which refers to observable physical characteristics such as skin color, hair texture, and facial features. While genotype (genetic makeup) and ethnicity (cultural identity) are important, race has historically and socially been categorized primarily by outward physical traits. This understanding is foundational in multicultural counseling, as it helps counselors recognize how clients might be perceived and treated in society.

- A. simplicity in interpretation of test results.
- B. interpretation of the results relative to a normal distribution.
- C. statistical analyses having greater quantitative accuracy.

### NEW QUESTION # 138

Which research design controls for the effect of taking a pretest on the outcome of an experiment?

- A. analysis of variance (ANOVA)
- B. factorial design
- C. Solomon four-group design

**Answer: C**

Explanation:

The Solomon four-group design is a true experimental design that specifically controls for the effects of taking a pretest. It involves four groups: two that receive a pretest and two that do not. This setup allows researchers to determine if the pretest itself has an effect on the outcomes, increasing internal validity. "The Solomon four-group design is the only experimental design that controls for both the effects of pretesting and treatment." Reference: Helwig, A. A. (2020). CPCE Study Guide and Review; Royle, D., Thyer, B. A., & Padgett, D. K.

- B. MAXMINCON.
- C. low error margin.

**Answer: B**

Explanation:

The principle of MAXMINCON stands for maximizing systematic variance, minimizing error variance, and controlling extraneous variance. This principle guides experimental design to enhance validity and reliability.
