

Pass Guaranteed Quiz 2026 Latest SAP Latest C_S43 Training

Free PDF Quiz 2023 SAP C_TS4FI_2020: Pass-Sure SAP Certified Application Associate - SAP S/4HANA for Financial Accounting Associates (SAP S/4HANA 2020) Latest Practice Questions

With C_TS4FI_2020 test training materials of 2Pass4sure, you will own the key to pass C_TS4FI_2020 exam, which will make you develop better in IT. All of this just need you trust us, trust in 2Pass4sure, and trust in C_TS4FI_2020 test training materials. Our training material of C_TS4FI_2020 exam is absolutely real and reliable. What's more, the passing rate of C_TS4FI_2020 test is as high as 100%.

SAP Certified Application Associate - SAP S/4HANA for Financial Accounting Associates (SAP S/4HANA 2020) Sample Questions (Q13-Q18):

NEW QUESTION # 13

Which of the following objects are relevant to the dunning program configuration? Choose the correct answers. 3

- A. Expenses or charges
- B. Minimum amounts
- C. Bank selection
- D. Dunning levels

Answer: A,B,D

NEW QUESTION # 14

On which level are asset classes created?

- A. Company code
- B. Chart of depreciation
- C. Client
- D. Depreciation area

Answer: C

NEW QUESTION # 15

SAP S/4HANA is the digital core of the intelligent enterprise. Which applications from the SAP portfolio are integrated with SAP S/4HANA to help you manage human resources? There are 2 correct answers to this question.

- A. SAP Fieldglass
- B. SAP success factors
- C. APARiba
- D. SAP C/4HANA

The social environment is constantly changing, and our C_S43 guide quiz is also advancing with the times. The content of C_S43 exam materials is constantly updated. You can save a lot of time for collecting real-time information. In order to ensure that you can see the updated C_S43 practice prep as soon as possible, our system sends the updated information to your email address first timing. In order to avoid the omission of information, please check your email regularly.

Learning at electronic devices does go against touching the actual study. Although our C_S43 exam dumps have been known as one of the world's leading providers of exam materials, you may be still suspicious of the content. Therefore, we especially provide several demos for future reference and we promise not to charge you of any fee for those downloading. Then you will know whether it is suitable for you to use our C_S43 Test Questions. There are answers and questions provided to give an explicit explanation. We are sure to be at your service if you have any downloading problems'

Reliable C_S43 Exam Registration, C_S43 Latest Version

The SAP C_S43 certification exam is one of the hottest and career-oriented SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C_S43) exams. With the SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C_S43) exam you can validate your skills and upgrade your knowledge level. By doing this you can learn new in-demand skills and gain multiple career opportunities. To do

this you just need to enroll in the SAP C_S43 Certification Exam and put all your efforts to pass this important SAP C_S43 Exam Questions. However, you should keep in mind that to get success in the SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) (C_S43) exam is not an easy task.

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Sample Questions (Q11-Q16):

NEW QUESTION # 11

Check Inspection Lot and record Inspection Results

The project team evaluates during the implementation project the checking of Inspection Lots Checklist processing including result recording. The following features need to be checked:

- * Display the automatically created Inspection Lot
- * Record Inspection Results
- * Display the automatically created Inspection Lot for the previously created Maintenance Order including Checklist. The Inspection Lot comprises the following data:
 - * Record Inspection Results for the previously created Inspection Lot so that the Usage Decision is automatically set to Can be used

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 13 Overview

This task focuses on the quality management (QM) integration with maintenance. You will verify the inspection lot that was automatically triggered by your maintenance order and then record the results to confirm the technical object is fit for use.

Step 1: Display the Automatically Created Inspection Lot

Before recording results, you must verify that the system generated the correct inspection lot for your maintenance order.

- * Access the Transaction : Enter QA03 (Display Inspection Lot) in the command field and press Enter .
- * Locate the Lot : Search for the inspection lot associated with the maintenance order you created in Task 12.
- * Verify the Following Data :
- * Material : T-PM1100
- * Plant : 1010
- * Inspection Lot Origin : 89 (Miscellaneous)
- * Group : CL-DE-00
- * Group Counter : 1

Explanation : The inspection lot is the central record for quality testing. Seeing these specific values (Group CL-DE-00) confirms that the classification you set up in Task 11 correctly triggered the intended inspection plan.

Step 2: Record Inspection Results

This is the process of entering the actual findings from the checklist inspection.

- * Access the Transaction : You can navigate directly from the Inspection Lot in QA03 or use transaction QE51N (Results Recording Selection).
- * Select the Lot : Enter your inspection lot number and click Execute .
- * Record Results :
- * Enter the inspection values for each characteristic listed in the checklist.
- * Ensure the values you enter are within the "Acceptable" range or marked as "Pass".
- * Automatic Usage Decision : Record the results such that the Usage Decision (UD) is automatically set to "Can be used" .
- * Save : Click the Save (floppy disk) icon.

Explanation : By recording positive results, you satisfy the quality requirements for the maintenance task.

The automatic transition to "Can be used" status tells the system the pump has passed inspection and the maintenance order can proceed toward completion.

NEW QUESTION # 12

Create a Maintenance Plan

The project team evaluates during the implementation project Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Create a Maintenance Plan

Create a Maintenance Plan and save it. Use the following information:

□

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 8: Create a Maintenance Plan

The objective of this task is to create a strategy-based maintenance plan that will automatically generate work orders for your pump based on the frequencies defined in your task list.

Step 1: Access the Transaction

* Transaction Code : Enter IP42 in the command field and press Enter .

* Initial Screen :

* Maintenance Plan Category : Select Maintenance Order (or "Maintenance plan for Maintenance Order" if using the Fiori Launchpad).

* Maintenance Strategy : Enter Z48 .

* Press Enter .

Step 2: Enter Header and Maintenance Item Data

Once you are on the main creation screen, fill in the "Maintenance Item" section to define what is being maintained and how the orders should look:

* Description : Enter Regular pump maintenance Z48 .

* Equipment : Enter T-PA48 .

* Planning Plant : This should default to 1010 based on the equipment, but ensure it is correct.

* Order Type : Enter PM02 .

Explanation : By assigning Equipment T-PA48 and Order Type PM02 , you are telling SAP to generate a specific "Planned" maintenance order every time this schedule is triggered.

Step 3: Link the Task List

This step connects the plan to the specific maintenance steps (operations) you created in Task 7.

* Look for the Task List section at the bottom of the screen.

* Task List Type : Enter A (General Task List).

* Group : Enter TL-48 .

* Counter : Enter 1 .

* Press Enter to validate the connection. You should see the description "Regular Maintenance GR48" appear.

Explanation : Linking the Task List ensures that when the maintenance plan generates an order, it automatically copies the 30-minute operations you defined earlier into that order.

Step 4: Set Scheduling Parameters (Optional but Recommended)

While the table in your document focuses on the data above, typically you would click the Maintenance Plan Scheduling Parameters tab to ensure the "Scheduling Period" and "Start Date" are set. However, for the assessment, the mandatory data is what we entered in Steps 1-3.

Step 5: Save

* Click the Save (floppy disk) icon.

* Note your Maintenance Plan Number : The system will display a message at the bottom, such as

"Maintenance plan 123 saved." Write this number down , as you will need it for Task 9: Schedule a Maintenance Plan .

Task 8 is now complete! You have built the automated "brain" that will handle the recurring maintenance for your pump.

NEW QUESTION # 13

Create and use a Maintenance Work Center

The project team evaluates during the implementation project the organizational elements in SAP S/4HANA Asset Management.

The following features need to be checked:

* Create a Maintenance Work Center

* Create a capacity demand for a Maintenance Work Center

* Create a new Maintenance Work Center master record ZZ-ME## for maintenance plant 1010 similar to maintenance work center T-ME00 and save it. Use the following information:

□ * Create a capacity demand of 1 hour for the just created Maintenance Work Center ZZ-ME## by creating a new maintenance order of order type PM01 .

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 3: Create and Use a Maintenance Work Center

Objective

In Task 3, the requirement was to:

- * create a new maintenance work center ZZ-ME42 for plant 1010 similar to T-ME00
- * maintain the required capacity values
- * create a 1-hour capacity demand for that work center by creating a maintenance order of type PM01

□

Part 1: Create the Maintenance Work Center

Requirement from task file

The task required the following values for the work center:

- * Plant = 1010
- * Work Center = ZZ-ME42
- * Description = Mechanical Maintenance 42
- * No. Ind. Capacities = 5
- * Capacity = 24.00 H

The task also stated that the work center must be created similar to maintenance work center T-ME00 .

□

Step-by-step procedure

Step 1: Open work center creation

- * Go to SAP GUI command field
- * Enter transaction IR01
- * Press Enter

Transaction IR01 is used to create a new work center. This is the correct starting point for creating the maintenance work center required in Task 3.

Step 2: Enter initial work center data

On the Create Work Center: Initial Screen , enter:

- * Plant = 1010
- * Work Center = ZZ-ME42
- * Work Center Category = 0005
- * In Copy from :
- * Plant = 1010
- * Work Center = T-ME00

Then press Enter .

The task explicitly required the work center to be created for plant 1010 and to be created similar to T-ME00.

Work center category 0005 is the maintenance work center category, so this was the correct category to use for a maintenance work center.

Step 3: Include capacity data during copy

When the Copy from popup appeared:

- * select Capacities
- * continue with the green check

This was important because the task required changing capacity-related data:

- * No. Ind. Capacities = 5
- * Capacity = 24.00 H Copying the capacity data ensured the new work center inherited the capacity structure from T-ME00 and could then be adjusted correctly.

□

Step 4: Maintain basic data

On the work center master screen:

- * change the description to Mechanical Maintenance 42

This matches the exact description required by the task.

Step 5: Maintain capacity values

Go to the Capacities tab, then open the capacity detail screen.

Maintain or verify:

- * No. Ind. Capacities = 5
- * Capacity Base Unit = H
- * Capacity recalculated to 24.00 H

In our system, the Capacity field was system-calculated and not directly editable.

The final valid values were achieved with:

- * Start Time = 08:00:00
- * End Time = 17:00:00
- * Length of breaks = 01:00:00
- * Capacity Utilization = 60
- * No. Ind. Capacities = 5

This produced:

- * Capacity = 24.00 H

The task required 24.00 H capacity, but SAP calculated it automatically based on operating time, utilization, and number of individual capacities.

The resulting calculation was correct and matched the task requirement exactly.

Step 6: Save the work center

* Click Save

Later, when trying to create the same work center again, SAP displayed the system message:

* "Work center ZZ-ME42 in plant 1010 already exists"

Explanation / Verification:

This system message confirmed that the work center had already been created successfully.

Therefore, the creation of ZZ-ME42 was verified as complete.

Part 2: Create a 1-Hour Capacity Demand

Requirement from task file

The task required:

* create a capacity demand of 1 hour

* for the newly created maintenance work center ZZ-ME42

* by creating a maintenance order of type PM01

Step-by-step procedure

Step 7: Open maintenance order creation

* In the command field, enter /nIW31

* Press Enter

Transaction IW31 is used to create a maintenance order.

The /n ensured SAP exited the previous transaction and opened the new one directly.

Step 8: Enter order header data

On the Create Maintenance Order: Initial Screen , enter:

* Order Type = PM01

* Planning Plant = 1010

Then press Enter .

The task explicitly required the capacity demand to be created by means of a maintenance order of type PM01 .

Step 9: Enter order description

On the order header screen, enter a short text such as:

* Capacity demand ZZ-ME42

The task did not prescribe a specific short text, so a meaningful description was used for traceability.

Step 10: Create the first operation

In the first operation area / operations overview, maintain:

* Operation = 0010

* Work Center = ZZ-ME42

* Plant = 1010

* Control Key = PM01

* Work Duration / Work = 1

* Unit = H

Then press Enter .

This operation is the actual source of the capacity demand .

The capacity demand is not created merely by the order header; it is created by assigning the operation to the work center with a planned work value of 1 hour .

Therefore, these operation entries were the critical part of fulfilling Task 3.

Step 11: Save the maintenance order

* Click Save

SAP displayed the confirmation message:

* "Order saved with number 4000314"

Explanation / Verification:

This was the final confirmation that the maintenance order had been created successfully.

Because the operation was assigned to ZZ-ME42 with 1 H planned work, this verified that the required 1- hour capacity demand had been created for the work center.

Verified completed objects

The following results were verified during execution:

* Maintenance Work Center created

* Work Center = ZZ-ME42

* Plant = 1010

* confirmed by SAP message that the work center already existed when rechecked

* Capacity maintained correctly

* No. Ind. Capacities = 5

- * Capacity = 24.00 H
- * Capacity demand created
- * maintenance order type PM01
- * operation assigned to ZZ-ME42
- * planned work = 1 H
- * Order successfully saved
- * SAP confirmation: Order saved with number 4000314

NEW QUESTION # 14

Create a Task List

The project team evaluates during the implementation project Task Lists in SAP S/4HANA Asset Management. The following features need to be checked:

- * Create a Task List header
- * Create Task List operations
- * Create a Task List with 3 Task List operations. Maintenance Strategy Z## comprises Maintenance Packages with different hierarchy levels.

Use the following information at header level of the Task List:

□ Use the following information for each Task List operation:

□ * Assign Maintenance Packages to the Task List Operations as follows:

- * Operation 10 is to be performed monthly.
- * Operation 20 is to be performed every 4 months.
- * Operation 30 is to be performed every 12 months.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Since we encountered that error with the Z48 strategy, we must ensure that is fixed before we can finish the Task List. Here is the complete, verified, step-by-step process to finalize Task 7, including the "hidden" pre-requisite.

Task 7: Create a General Task List

Objective : To create a standardized template of maintenance steps that can be automatically pulled into future work orders based on a schedule.

Step 1: The Pre-requisite (Fixing Strategy Z48)

If you haven't done this yet, SAP will not let you save the Task List.

- * Transaction : IP11 (Maintain Maintenance Strategies).
- * Action : Click New Entries .
- * Strategy : Z48
- * Description : Strategy for Group 48
- * Strategy Unit : MON (Months).
- * Packages : On the left, double-click Packages, then click New Entries :
- * Line 1 : Cycle 1 / Unit MON / Text Monthly
- * Line 2 : Cycle 4 / Unit MON / Text Every 4 Months
- * Line 3 : Cycle 12 / Unit MON / Text Yearly
- * Save (Floppy Disk icon).

Explanation : A strategy is the "calendar" that defines how often work happens. Without this, the system doesn't know what "Monthly" or "Yearly" means.

Step 2: Create Task List Header

- * Transaction : IA05 .
- * Initial Screen : Group TL-48, Group Counter 1. Press Enter .
- * Header Fields :
- * Description : Regular Maintenance GR48
- * Planning Plant : 1010
- * Work Center : MK-00 / Plant : 1010
- * Usage : 4 (Plant Maintenance)
- * Status : 4 (Released)
- * Planner Group : P48
- * Maint. Strategy : Z48

Explanation : The header defines who is responsible for the work (Planner Group P48) and which scheduling rules (Strategy Z48)

apply to the whole list.

Step 3: Create Operations

* Click the Operations button (F6) at the top.

* Enter three rows with this data:

* Op 10 : Work Center MK-00, Plant 1010, Control Key PM01, Work 30, Unit MIN.

* Op 20 : (Same as above).

* Op 30 : (Same as above).

Explanation : Operations are the actual steps the technician follows. Here, we are saying each step takes 30 minutes of mechanical labor.

Step 4: Assign Maintenance Packages (The "Frequencies")

This is the most important part of Task 7. We tell SAP which operation happens when.

* Select Row 10 (click the box at the far left of the row).

* Go to Menu: Goto > Maintenance Packages .

* Check the box for the 1 Month package. Click the Back (Green Arrow) icon.

* Select Row 20 .

* Go to Goto > Maintenance Packages and check the 4 Month package. Click Back .

* Select Row 30 .

* Go to Goto > Maintenance Packages and check the 12 Month package. Click Back .

Explanation : Now, SAP knows that Op 10 happens every month, but Op 30 only happens once a year.

Step 5: Save

* Click the Save icon.

* The message at the bottom should say: "Task list TL-48 saved with group counter 1" .

NEW QUESTION # 15

Task 6: Configure Maintenance Order Types and work with Maintenance Orders The project team evaluates during the implementation project Maintenance Orders in SAP S/4HANA Asset Management. The following features need to be checked:

* Configure a Maintenance Order Type and create a Maintenance Order

* Create a Time Confirmation a Maintenance Order

* Prepare a Maintenance Order for Completion

* Create a Maintenance Order and save it.

Note:

Make sure that you have maintained all required customizing settings for the Maintenance Order Type.

Use the following information at header level:

□ Plan a Maintenance Order Operation and use the following information:

□

* Create a Time Confirmation for the just created Maintenance Order. Use the following information:

□

* Display the Actual Costs assigned to the just created Maintenance Order and set it to Technically Completed. Display the Settlement Rule.

□

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 6 Overview

The goal of this task is to process a repair from start to finish. You will convert the "leaking pump" notification into a work order, plan the labor, record the work performed, and technically close the file.

Step 1: Create the Maintenance Order from Notification

Instead of starting from scratch, we link the order to the notification you created in Task 5.

* Access the Transaction : Use transaction code IW31 .

* Initial Screen :

* Order Type : PM01.

* Notification : Enter your notification number (e.g., 10000147).

* Press Enter .

* Header Data :

* The description "Pump is leaking" should pull in automatically.

* Main Work Center : Ensure it is T-ME48.

Explanation : By entering the notification number, SAP automatically pulls in the equipment, functional location, and problem description, ensuring "data integrity" across the maintenance process.

Step 2: Plan the Operations (Labor)

You must tell the system how much effort the repair requires.

- * Go to the Operations Tab .
- * Enter Planning Data :
- * Work : 2.
- * Unit (Un) : H (Hours).
- * Number : 1 (One person).
- * Duration (Dur.) : 2 / Unit : H.
- * Add Enhancement Data :
- * Click the Additional Data tab - > Enhancement sub-tab.
- * In the Field Key box, use the search (F4) to select 0000001 (User-defined fields).
- * In the first text box (Text 1), type: Industrial Z48.

Explanation : Planning the work allows the system to calculate the estimated cost of the repair. The "Enhancement" data is used to store specific technical details (like the motor type) that aren't in the standard SAP fields.

Step 3: Release the Order

An order in "Created" (CRTD) status is just a plan. To start work, it must be "Released" (REL).

- * Release : Look at the top toolbar and click the Green Flag icon .
- * Verify Status : The "Sys.Status" field should now include REL.
- * Save : Click the Save (floppy disk) icon.

Explanation : Releasing the order is the "Green Light" for the shop floor. It allows technicians to charge time to the job and warehouse staff to issue parts.

Step 4: Time Confirmation (Recording the Work)

Now we record that the repair is physically finished.

- * Access the Transaction : Use transaction code IW41 .
- * Enter Data :
- * Order : Enter your order number (e.g, 4000395).
- * Actual Work : 2 H.
- * Check the boxes for Final Confirmation and No Remaining Work .
- * Confirmation Text : Pump repaired and tested.
- * Save : Click the Save icon.

Explanation : This step captures the "Actual Cost." SAP multiplies the 2 hours of labor by the hourly rate of work center T-ME48 to calculate exactly how much this repair cost the company.

Step 5: Technical Completion (TECO)

The final administrative step to close the repair file.

- * Access the Transaction : Use transaction code IW32 .
- * Complete Technically :
- * Go to menu: Order > Functions > Complete > Complete (technically) .
- * Click the Green Checkmark on the popup window.
- * Save : Click the Save icon.

Explanation : TECO (Technical Completion) locks the order. It tells the system the asset is back in service and prevents any further labor or parts from being charged to this specific job.

NEW QUESTION # 16

.....

The authoritative, efficient, and thoughtful service of C_S43 learning question will give you the best user experience, and you can also get what you want with our study materials. I hope our study materials can accompany you to pursue your dreams. If you can choose C_S43 test guide, we will be very happy. We look forward to meeting you. You can choose your favorite our study materials version according to your feelings. When you use C_S43 Test Guide, you can also get our services at any time. We will try our best to solve your problems for you. I believe that you will be more inclined to choose a good service product, such as C_S43 learning question. After all, everyone wants to be treated warmly and kindly, and hope to learn in a more pleasant mood.

Reliable C_S43 Exam Registration: https://www.dumpstorrent.com/C_S43-exam-dumps-torrent.html

Allowing for there is a steady and growing demand for our C_S43 practice materials with high quality at moderate prices, we never stop the pace of doing better, SAP Latest C_S43 Training the real exam questions with complete answers on all of your favourite certifications, meant to provide you a definite and enviable success, Besides that, our new updates are indispensable component for your reference, and to help you get to know many basic points of knowledge intensively with our C_S43 sure-pass study materials, you do not need to splurge many money on practice materials any more, but get delightful certificate as you wish.

You can even have a number of substeps within a single action just remember **Latest C_S43 Training** to indent your `ifs`, and

comment your code well) The key to remember is to keep all display and data handling out of this template.

Quiz SAP C_S43 - First-grade Latest SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Training

Validation of certification This certification Latest C_S43 Training exam remains valid for three years, Allowing for there is a steady and growing demand for our C_S43 practice materials with high quality at moderate prices, we never stop the pace of doing better.

the real exam questions with complete answers on all of your favourite certifications, C_S43 meant to provide you a definite and enviable success, Besides that, our new updates are indispensable component for your reference, and to help you get to know many basic points of knowledge intensively with our C_S43 sure-pass study materials, you do not need to splurge many money on practice materials any more, but get delightful certificate as your wish.

Our product are much in demand home and abroad which C_S43 Latest Version have strong function in comparison with other same kind product, You will never be disappointed.
