

C-S43-2601 Latest Exam Question | Latest C-S43-2601 Exam Registration

C-S43-2601 is so flexible that you can easily change the timings, types of questions, and topics for each mock exam. Dumpleader's SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) practice test contains all the important questions that will appear in the actual C-S43-2601 Exam. We design and update our SAP C-S43-2601 exam questions after receiving precious feedback. You can try a demo and sample of C-S43-2601 exam questions before purchasing.

The interface is made simple and convenient for the users. In the web-based practice exam, you will be given conceptual questions of the actual SAP C-S43-2601 exam and gives you the results so that you can improve it at the end of every attempt. This sort of self-evaluation will help you know your exact weak points and you will improve a lot before the actual C-S43-2601 Exam. It is compatible with every browser. All operating systems also support the web-based practice exam.

Latest C-S43-2601 Exam Registration, C-S43-2601 Real Dump

Can you imagine that you only need to review twenty hours to successfully obtain the C-S43-2601 certification? Can you imagine that you don't have to stay up late to learn and get your boss's favor? With C-S43-2601 study materials, passing exams is no longer a dream. If you are an office worker, C-S43-2601 Study Materials can help you make better use of the scattered time to review. Just a mobile phone can let you do questions at any time.

SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) Sample Questions (Q10-Q15):

NEW QUESTION # 10

Create a Task List

The project team evaluates during the implementation project Task Lists in SAP S/4HANA Asset Management. The following features need to be checked:

- * Create a Task List header
- * Create Task List operations
- * Create a Task List with 3 Task List operations. Maintenance Strategy Z## comprises Maintenance Packages with different hierarchy levels.

Use the following information at header level of the Task List:

- Use the following information for each Task List operation:
 - * Assign Maintenance Packages to the Task List Operations as follows:
 - * Operation 10 is to be performed monthly.
 - * Operation 20 is to be performed every 4 months.
 - * Operation 30 is to be performed every 12 months.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Since we encountered that error with the Z48 strategy , we must ensure that is fixed before we can finish the Task List. Here is the complete, verified, step-by-step process to finalize Task 7 , including the "hidden" pre- requisite.

Task 7: Create a General Task List

Objective : To create a standardized template of maintenance steps that can be automatically pulled into future work orders based on a schedule.

Step 1: The Pre-requisite (Fixing Strategy Z48)

If you haven't done this yet, SAP will not let you save the Task List.

- * Transaction : IP11 (Maintain Maintenance Strategies).
- * Action : Click New Entries .
- * Strategy : Z48
- * Description : Strategy for Group 48
- * Strategy Unit : MON (Months).
- * Packages : On the left, double-click Packages , then click New Entries :
- * Line 1 : Cycle 1 / Unit MON / Text Monthly
- * Line 2 : Cycle 4 / Unit MON / Text Every 4 Months
- * Line 3 : Cycle 12 / Unit MON / Text Yearly
- * Save (Floppy Disk icon).

Explanation : A strategy is the "calendar" that defines how often work happens. Without this, the system doesn't know what "Monthly" or "Yearly" means.

Step 2: Create Task List Header

- * Transaction : IA05 .
- * Initial Screen : Group TL-48, Group Counter 1. Press Enter .
- * Header Fields :
- * Description : Regular Maintenance GR48
- * Planning Plant : 1010
- * Work Center : MK-00 / Plant : 1010
- * Usage : 4 (Plant Maintenance)
- * Status : 4 (Released)
- * Planner Group : P48
- * Maint. Strategy : Z48

Explanation : The header defines who is responsible for the work (Planner Group P48) and which scheduling rules (Strategy Z48) apply to the whole list.

Step 3: Create Operations

- * Click the Operations button (F6) at the top.
- * Enter three rows with this data:
 - * Op 10 : Work Center MK-00, Plant 1010, Control Key PM01, Work 30, Unit MIN.
 - * Op 20 : (Same as above).

* Op 30 : (Same as above).

Explanation : Operations are the actual steps the technician follows. Here, we are saying each step takes 30 minutes of mechanical labor.

Step 4: Assign Maintenance Packages (The "Frequencies")

This is the most important part of Task 7. We tell SAP which operation happens when.

* Select Row 10 (click the box at the far left of the row).

* Go to Menu: Goto > Maintenance Packages .

* Check the box for the 1 Month package. Click the Back (Green Arrow) icon.

* Select Row 20 .

* Go to Goto > Maintenance Packages and check the 4 Month package. Click Back .

* Select Row 30 .

* Go to Goto > Maintenance Packages and check the 12 Month package. Click Back .

Explanation : Now, SAP knows that Op 10 happens every month, but Op 30 only happens once a year.

Step 5: Save

* Click the Save icon.

* The message at the bottom should say: "Task list TL-48 saved with group counter 1" .

NEW QUESTION # 11

Create a Maintenance Order with Checklists

The project team evaluates during the implementation project Maintenance Orders with Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

* Create a Maintenance Order with Checklist

* Display a Maintenance Order with automatically generated Object List and Checklist.

* Create a Maintenance Order using an Order Type which is already configured for the checklist process.

Use the following data:

* Display the previously created Maintenance Order with automatically generated Object List and Checklist.

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 12 Overview

In this task, you will create a maintenance order using a specific order type configured for the checklist process. The system will then automatically generate an object list and a corresponding checklist based on the equipment and task list assigned.

Step 1: Create a Maintenance Order with Checklist

You need to create a new order using a functional location and a specific task list that triggers the checklist functionality.

* Access the Transaction : Use transaction code IW31 (Create Maintenance Order).

* Initial Screen :

* Order Type : Select an order type already configured for the checklist process (typically PM01 or a specific custom type designated for checklists in your training environment).

* Press Enter .

* Enter Header and Location Data :

* Functional Location : Enter 48-01-PRD-01-03-HD .

* Description : Enter a relevant description (e.g., Pump Checklist Maintenance GR48).

* Assign the Task List :

* Go to the Operations tab or find the task list assignment section.

* General Maintenance Task List : Enter A / T-PMCLEN / 1 .

* Press Enter to validate.

* Save : Click the Save (floppy disk) icon.

Explanation : By assigning this specific functional location and general task list, you are triggering the

"Checklist" integration. The system uses the classification data you set up in Task 11 to determine that a checklist (inspection lot) is required for this job.

Step 2: Display and Verify the Checklist

After saving, you must verify that the system correctly generated the technical components of the checklist.

* Display the Order : Use transaction code IW33 and enter the order number you just created.

* Verify the Object List :

* Navigate to the Object List tab.

* You should see the equipment or functional location listed here with a link to the checklist.

* Verify the Checklist :

* Look for a button or tab labeled Checklists or Inspection Lot within the order.

* The system should show that a checklist has been automatically generated for the repair operations.

Explanation : The goal of this step is to confirm that the "Object List" and "Checklist" were created automatically by the system. This proves the background configuration for QM (Quality Management) integration is working correctly with your maintenance order

NEW QUESTION # 12

Use Phase-Based Maintenance Processing

The project team evaluates during the implementation project Phase-Based Maintenance Processing in SAP S/4HANA Asset Management. The following features need to be checked:

* Initiate and screen a Maintenance Notification

* Plan Maintenance Order and send it for approval

* Create a Maintenance Notification using an already available notification type which is suitable for phase-based maintenance and save it.

Use the following data:

* Screen and accept the just created Maintenance Notification.

* Create an Order (Phase-based) for your accepted notification and submit it for approval.

Use the following data:

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 10 Overview

This task evaluates your ability to manage the newer, phase-led maintenance workflow in SAP S/4HANA.

Unlike the traditional "emergency" repair you did earlier, this process includes formal screening and approval steps Step 1: Create a Phase-Based Maintenance Notification In this step, you initiate the request.

* Access the Transaction : Use transaction IW21 or the Fiori app Create Maintenance Request .

* Select Notification Type : Use a type configured for phase-based maintenance (typically Y1 - Maintenance Request).

* Enter the Following Data :

* Technical Object : T-PB48

* Description : Defective pump (phase-based)

* Current Location : Production Line 1

* Detection Method : Continuous Condition Monitoring

* Operational Effect : Production restricted

* Save : Note the notification number generated.

Explanation : This step "initiates" the maintenance process. In phase-based maintenance, the notification starts in the Initiation phase, where it must be reviewed before any work is planned.

Step 2: Screen and Accept the Notification

As a "Maintenance Coordinator," you must now review the request.

* Access the Fiori App : Open Screen Maintenance Requests .

* Locate Your Notification : Find the notification you just created for T-PB48.

* Perform Screening :

* Review the details to ensure they are complete.

* Click Accept to move it to the next phase.

Explanation : "Screening" is a quality gate. It ensures that the maintenance team only spends time planning valid, well-described issues. Once accepted, the notification moves from the Initiation phase to the Screening phase and finally becomes available for planning

Step 3: Create and Plan the Phase-Based Order

Now you will create the formal work order for the accepted request.

* Create Order : From within the accepted notification, or using the Manage Maintenance Backlog app, choose to Create Order .

* Enter Planning Data :

* Technical Object : T-PB48

* Operation 0010 Description : Repair damage

* Operation 0010 Work : 2 h

* Submit for Approval : Look for the Submit for Approval button at the top of the order screen.

Explanation : This step moves the order into the Planning phase. By submitting it for approval, you are requesting the budget and resources to perform the work. The order status will change to indicate it is

"Waiting for Approval"

NEW QUESTION # 13

Schedule a Maintenance Plan

The project team evaluates during the implementation project the scheduling of Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Schedule a Maintenance Plan

Display a generated Maintenance Order

Schedule the previously created Maintenance Plan. The following prerequisites have to be met:

The next upcoming call is the 4 MON Maintenance Package

Calculate the Completion Date of the last Maintenance Package as follows: Today's date minus 4 weeks (e.g.

today's date: 15th of December >>> Completion Date: 17th of November) The Call Date is always 10 days before the Plan Date.

Note:

Check your Maintenance Plan and adapt it, if necessary, before you schedule it.

Check the following information in the generated Maintenance Order:

number of order operations: 2

Maintenance Plan: number of the previously created Maintenance Plan

Last Included Task List: A / TL-## / 1

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 9 Overview

The goal of this task is to trigger the maintenance schedule you built in Task 8 so that the system generates an actual work order.

You must meet specific scheduling conditions to ensure the right maintenance cycle (the 4- month package) is triggered.

Step 1: Adapt Scheduling Parameters (IP02)

Before starting the schedule, you must ensure the "Call Date" rules are correct.

* Transaction : Enter IP02 (Change Maintenance Plan).

* Maintenance Plan : Enter the number you saved in Task 8 and press Enter .

* Scheduling Parameters Tab :

* Call Horizon : Adjust this so that the Call Date occurs exactly 10 days before the Plan Date.

* Note: If your system uses percentages, you will need to calculate the percentage of the 4-month cycle that results in a 10-day lead time.

* Save your changes.

Step 2: Schedule the Plan (IP10)

Now you will "start" the clock for this maintenance schedule.

* Transaction : Enter IP10 (Schedule Maintenance Plan).

* Maintenance Plan : Enter your plan number and press Enter .

* Start Scheduling : Click the Start icon (or go to Maintenance plan > Scheduling > Start).

* Enter the "Start Date" / "Completion Date" :

* The Rule : You must use Today's date minus 4 weeks .

* Example: If today is April 19, enter March 22.

* Press Enter . The system will calculate the next calls.

* Verify the Package : Ensure the next upcoming call is indeed the 4 MON (4-month) Maintenance Package.

* Save (Floppy Disk icon). This will generate a new Maintenance Order number.

Step 3: Verify the Generated Maintenance Order

You must now check that the order was created correctly based on the rules of your Task List (Task 7) and Maintenance Plan (Task 8).

* Display Order : In IP10 , select the line for the generated call and click the Display Order icon (or use transaction IW33 with the new order number).

* Check the following three items :

* Operations : Verify there are exactly 2 operations in the order (the Monthly and 4-Month tasks).

* Maintenance Plan : Confirm the order shows your specific Maintenance Plan number.

* Task List : Verify the "Last Included Task List" is A / TL-48 / 1 .

NEW QUESTION # 14

Task 4: Configure and create Technical Objects

The project team evaluates during the implementation project Technical Object structures in SAP S/4HANA Asset Management.

The following features need to be checked:

- * Configure and create Functional Locations
- * Create, serialize and install Equipment
- * Create Functional Location master record ZZ0##-01 and save it. Use the following information:
 - * Create Equipment master record EQUI-## and save it. Use the following information:
 - * Serialize the just created Equipment master record EQUI-## . Use the following data:
 - * Install Equipment EQUI-## at the Functional Location 00-01-ASS-02 .

Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 4: Configure and create Technical Objects

This task evaluates your ability to structure and manage the physical and functional hierarchy of assets in SAP S/4HANA Asset Management.

Step 1: Create Functional Location Master Record

A Functional Location represents the area at which a maintenance task is to be performed.

- * Access the Transaction : Use transaction code IL01 (Create Functional Location).
- * Enter Initial Data :
 - * Functional Location : ZZ048-01.
 - * Structure Indicator : ZZ48.
 - * Functional Location Category : T.
 - * Press Enter .
- * Enter General Data :
 - * Description : Production Line Z48.
- * Enter Location and Organization Data :
 - * Maintenance Plant : 1020.
 - * Cost Center : 4110.
 - * Planning Plant : 1020.
 - * Planner Group : Z48.
 - * Main WorkCtr : T-ME48.
 - * Work Center Plant : 1010.
 - * Save : Click the Save icon.

Explanation : By creating this record, you define a specific functional area within Plant 1020 where maintenance costs and history will be tracked for all equipment installed there.

Step 2: Create Equipment Master Record

Equipment represents an individual physical object that is maintained as an autonomous unit.

- * Access the Transaction : Use transaction code IE01 (Create Equipment).
- * Enter Initial Data :
 - * Equipment : EQUI-48.
 - * Equipment Category : T.
 - * Press Enter .
- * Enter General Data :
 - * Description : Drive Motor GR48.
 - * Save : Click the Save icon.

Explanation : This step creates a master record for a physical asset-a drive motor-allowing you to track its individual lifecycle, independent of where it is currently installed.

Step 3: Serialize the Equipment

Serialization links a piece of equipment to a specific material and unique serial number for inventory management and tracking.

- * Access the Transaction : Use transaction code IE02 (Change Equipment) and enter EQUI-48.
- * Navigate to Serial Data : Go to the SerData (Serial Data) tab.
- * Enter Serialization Data :
 - * Material : T-PM8000.
 - * Serial Number : EQUI-48.
 - * Save : Click the Save icon.

Explanation : Linking the motor to Material T-PM8000 enables the system to track this specific asset as a serialized part, which is

essential for warehouse movements and warranty tracking.

Step 4: Install Equipment at a Functional Location

This establishes the relationship between the physical asset (Equipment) and the functional area where it is operating.

* Access the Transaction : Use transaction code IE02 (Change Equipment) for EQUI-48.

* Modify Installation Location :

* Click on the Structure tab.

* Find the FunctLoc field.

* Enter the location: 00-01-ASS-02.

* Save : Click the Save icon.

Explanation : This installation "plugs" your drive motor into the functional hierarchy at location 00-01-ASS-02. From this point forward, any maintenance performed on this motor will be automatically associated with that location's history.

NEW QUESTION # 15

.....

If you want to own a better and bright development in the IT your IT career, it is the only way for you to pass C-S43-2601 exam. Don't complain how difficult the C-S43-2601 exam is. Because our Dumpleader experienced technicians have provided efficient way for you to easily get C-S43-2601 Exam Certification. We constantly update test simulation software in order to help you who are preparing for C-S43-2601 exam by efforts to get the satisfactory results.

Latest C-S43-2601 Exam Registration: https://www.dumpleader.com/C-S43-2601_exam.html

SAP C-S43-2601 Latest Exam Question You must depend on yourself to acquire what you want, With the company of our C-S43-2601 study materials, you will find the direction of success, The biggest surprise for you is that we will send the latest version of our C-S43-2601 actual test to your email address during the whole year for free after you buy our SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) practice torrent, which means you won't miss any information about the current event which may occur in the exam with the help of our latest C-S43-2601 practice training, otherwise, you may have to spend a lot of time in collecting the information about the current affairs by yourself, SAP C-S43-2601 Latest Exam Question The whole study process is interesting and happy.

Select a Startup Disk, She offers customized onsite training to advertising C-S43-2601 agencies, graphic design firms, newspapers, and magazine publishers, You must depend on yourself to acquire what you want.

Top C-S43-2601 Latest Exam Question | Efficient C-S43-2601: SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) 100% Pass

With the company of our C-S43-2601 Study Materials, you will find the direction of success, The biggest surprise for you is that we will send the latest version of our C-S43-2601 actual test to your email address during the whole year for free after you buy our SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C_S43_2601) practice torrent, which means you won't miss any information about the current event which may occur in the exam with the help of our latest C-S43-2601 practice training, otherwise, you may have to spend a lot of time in collecting the information about the current affairs by yourself.

The whole study process is interesting and happy, At present, our C-S43-2601 exam guide gains popularity in the market.
