UiPath Automation Business Analyst Associate Exam (2023.10) Sample Questions (Q49-Q54):

NEW QUESTION # 49

Which of the following roles is primarily responsible for defining automation architecture and technical strategy?

- A. Project Manager
- **B. Solution Architect**
- C. Business Analyst
- D. Infrastructure Engineer

Answer: B

Explanation:

The Solution Architect is the primary role responsible for defining the automation architecture and technical strategy in a UiPath automation project. This includes choosing the right components (e.g., Studio, Orchestrator, attended vs. unattended bots), designing reusable modules, and ensuring scalability and maintainability.

They act as the technical leader, providing guidance to the development team and ensuring that the architecture adheres to best practices. The Solution Architect is also involved in every major stage - from Business Case Validation and Solution Design to UAT and Deployment - to maintain consistency and resolve any technical challenges.

Their expertise ensures that the automation is technically sound, aligns with infrastructure constraints, and integrates seamlessly into the client's existing ecosystem. They also play a key role in identifying technical risks and proposing solutions early in the project.

NEW QUESTION # 50

Which document outlines the future state of the process and modules to be developed?

- **A. Solution Design Document (SDD)**
- B. Statement of Work (SOW)
- C. Project Charter
- D. UAT Test Script

Answer: A

Explanation:

The Solution Design Document (SDD) outlines the future state (To-Be) of the business process, including the detailed technical components and modules to be developed. It is a critical output of the Solution Design stage and serves as the blueprint for the development team.

The SDD includes:

- * Automation logic and flow diagrams
- * Breakdown of reusable modules
- * Exception handling logic
- * Integration and system interaction points
- * Technical configurations and assumptions

Prepared primarily by the Solution Architect, the SDD ensures that development follows a clear and consistent direction. It helps prevent misinterpretation of business requirements and facilitates better collaboration among developers, testers, and architects.

NEW QUESTION # 51

What is the purpose of the Hypercare period in the automation lifecycle?

- **A. To provide close monitoring and immediate support after go-live**
- B. To re-analyze the As-Is process before automation
- C. To assess long-term value post-deployment
- D. To create the business case for automation

Answer: A

Explanation:

The Hypercare period is a critical phase that provides close monitoring and immediate support after the automation is deployed to the production environment. It ensures the automation is functioning as expected in a live setting and that any issues or bugs are addressed promptly.

This period typically lasts for a predefined timeframe and involves Automation Developers, Solution Architects, and the Project Manager, who remain available to resolve incidents, fine-tune performance, and support users during the initial transition.

Hypercare builds user confidence, ensures stability, and validates that the automation meets real-world requirements. It bridges the

gap between deployment and long-term support, ensuring a smooth handover to operations or support teams.

NEW QUESTION # 52

What is the output of the Solution Design stage in the UiPath Automation Implementation Methodology?

- A. Automation Test Plan
- **B. Approved Solution Design Document (SDD)**
- C. Hypercare Support Plan
- D. Process Definition Document (PDD)

Answer: B

Explanation:

The main deliverable from the Solution Design stage is the Approved Solution Design Document (SDD).

This document contains a detailed description of the To-Be automation flow, including technical components, workflow modules, system interactions, exception handling strategies, and deployment plans.

The solution architect leads this stage, working with the automation developers and project manager to translate the requirements documented in the PDD into a scalable, modular, and efficient automation architecture. The SDD serves as the blueprint for the development team, ensuring consistency and clarity in how the automation should be built.

This document also includes details on infrastructure, access requirements, assumptions, dependencies, and constraints. A well-documented and approved SDD reduces development time, minimizes rework, and increases the likelihood of successful testing and deployment.

NEW QUESTION # 53

At what stage should the scope of a specific automation be finalized?

- **A. Process Analysis**
- B. Kickoff
- C. Solution Design
- D. Business Case and Technical Validation

Answer: A

Explanation:

The scope of a specific automation is finalized during the Process Analysis stage. While the Kickoff stage defines the high-level scope of the overall project, the detailed scope for each process is only finalized after the process has been thoroughly analyzed.

During Process Analysis, the Business Analyst and Solution Architect study the process in its As-Is state and collaborate to document it in the Process Definition Document (PDD). This document serves as the official agreement on what will be automated, the process boundaries, exceptions, rules, and inputs/outputs.

Once the PDD is reviewed and approved by both the Implementation and Client Teams, the detailed scope is considered locked.

This helps prevent scope creep during later stages and ensures that development remains focused on delivering the agreed automation features.
