## HPE2-W12 Exam Cram Questions, HPE2-W12 Reliable Practice Materials

Exam4Docs offers affordable Selling HPE Aruba Networking Solutions exam preparation material. You don't have to go beyond your budget to buy updated HP HPE2-W12 Dumps. Use the coupon code 'SAVE50' to get a 50% exclusive discount on all HP Exam Dumps. To make your HPE2-W12 Exam Preparation material smooth, a bundle pack is also available that includes all the 3 formats of dumps questions.

## HP Selling HPE Aruba Networking Solutions Sample Questions (Q24-Q29):

### NEW QUESTION # 24

A customer wants to know what makes HPE Aruba Networking ZTNA better than a traditional virtual private network (VPN). What is one key distinguishing value?

- A. HPE Aruba Networking ZTNA decreases complexity with its on-prem management platform.
- **B. HPE Aruba Networking ZTNA shrinks the attack surface by automatically creating and applying least-privilege policies.**
- C. The cloud-based solution seamlessly scales to accommodate customers' growing remote workforce.
- D. The cost of the solution is lower than a traditional VPN because HPE Aruba Networking ZTNA uses HPE Aruba Networking gateways.

**Answer: B**

Explanation:

The correct answer is C because Aruba Zero Trust Network Access (ZTNA) fundamentally reduces risk by replacing broad, implicit trust models of VPNs with least-privilege, identity-based access policies. Instead of giving remote users blanket access to the network, ZTNA dynamically enforces application- and user-specific policies, shrinking the attack surface and preventing lateral movement.

#### NEW QUESTION # 25

What is one value provided by HPE Aruba Networking Cloud Access Security Broker (CASB)?

- **A. Preventing users from sharing restricted data when using SaaS applications.**
- B. Accelerating performance for real-time apps across all of a customers' sites.
- C. Improving quality of experience for branch users running SaaS applications.
- D. Replacing a traditional virtual private network (VPN) for remote users with a more secure alternative.

**Answer: A**

Explanation:

The correct answer is D because the core value of a Cloud Access Security Broker (CASB) is to provide visibility, compliance, data protection, and threat prevention for SaaS applications. Aruba CASB helps prevent sensitive or restricted data from being uploaded, shared, or leaked through SaaS platforms (e.g., Microsoft 365, Salesforce, Google Workspace). This directly addresses compliance and data loss prevention (DLP) challenges.

#### NEW QUESTION # 26

What is one way that HPE Aruba Networking Central helps to simplify protecting the network?

- A. By providing a "sandbox" environment, in which traffic can be safely inspected for malware
- **B. By providing policy recommendations that admins can quickly preview and apply**
- C. By automatically adding rules to role-based access control policies in response to new types of threats
- D. By integrating with HPE Aruba Networking private 5G solutions to automatically enhance the security for Wi-Fi 5, 6, and 7 devices

**Answer: B**

Explanation:

The correct answer is B because Aruba Central leverages AI-powered insights and automation to recommend security and access policies that administrators can preview and apply directly. This helps simplify policy management and ensures consistent enforcement without requiring manual configuration for every change.

Relevant extracts from official HPE Aruba Networking documentation:

\* "Aruba Central provides AI-powered policy recommendations that reduce configuration complexity and allow IT administrators to preview and apply them quickly."

\* "With automated policy enforcement across wired, wireless, and WAN, Aruba Central simplifies protecting the network by ensuring consistent access control for users and devices."

\* "Central's role-based policy recommendations align with Aruba's Zero Trust security framework, minimizing risk while reducing administrative overhead."

\* "By integrating AI/ML insights, Aruba Central helps IT move from reactive troubleshooting to proactive security policy enforcement." Why the other options are incorrect:

\* A While Aruba does integrate with private 5G, this is not the primary way Aruba Central simplifies security.

\* B A sandbox environment for malware inspection is not a feature of Aruba Central; this is typically delivered by third-party security integrations.

\* D Aruba Central provides policy recommendations, but it does not automatically create and add rules without admin oversight. Admin approval is required for changes, maintaining operational control.

### NEW QUESTION # 27

A customer has many small sites that connect over a wide area network (WAN) to the customer's data center and access the Internet from there. Due to changes in traffic patterns, the CIO now wants to stop sending Internet-bound traffic through the data center, but the Head of IT Security is concerned about potential security risks from that change. What benefit of HPE Aruba Networking solutions should you emphasize?

- A. HPE Aruba Networking offers branch-in-the-box solutions with all the services branches require, so branch devices no longer need to send traffic to the Internet.
- **B. HPE Aruba Networking offers SD-WAN solutions for branches with built-in next-generation firewall capabilities.**
- C. HPE Aruba Networking Fabric Composer automatically establishes a secure fabric across all the customer's sites.
- D. HPE Aruba Networking solutions optimize network speeds to such a high degree that the company can continue sending all traffic through the data center.

**Answer: B**

Explanation:

The correct answer is B because HPE Aruba Networking EdgeConnect SD-WAN provides secure local Internet breakout at branch sites with integrated next-generation firewall (NGFW) and security features.

This allows Internet-bound traffic to be securely routed directly from the branch instead of being backhauled through the data center, while still ensuring full visibility and threat protection.

Relevant extracts from HPE Aruba Networking documentation:

\* "Aruba EdgeConnect SD-WAN enables local Internet breakout with integrated NGFW and IDS/IPS capabilities, reducing latency while ensuring strong security."

\* "This approach eliminates the inefficiencies of backhauling SaaS and Internet traffic to the data center, without compromising security posture."

\* "Built-in security services in Aruba SD-WAN address the CIO's need for performance and the CISO's need for risk mitigation."

\* "Aruba EdgeConnect integrates with SSE and SASE frameworks to extend security policies consistently across all branch sites."

Why the other options are incorrect:

\* A Keeping all traffic routed through the data center defeats the purpose of modern SD-WAN and SaaS-optimized architectures.

\* B While Aruba provides branch-in-a-box solutions, the specific concern here is security for Internet breakout, addressed by SD-WAN with NGFW.

\* D Fabric Composer is a data center fabric orchestration tool, not designed for WAN/branch security.

### NEW QUESTION # 28

What common challenge for network admins is created by an expanding remote workforce?

- A. Data center networks are not designed to receive so much external traffic.
- B. The shift in traffic away from the campus makes optimization difficult.
- **C. Typical VPN solutions are complex and take a lot of time to support.**
- D. Home equipment often lacks support for Wi-Fi 6.

**Answer: C**

Explanation:

The correct answer is B because as remote workforces expand, traditional VPN solutions have become a major challenge for IT teams. VPNs are complex to scale, create management overhead, and introduce performance bottlenecks. HPE Aruba Networking highlights that organizations increasingly need to move from VPN-based access to Zero Trust Network Access (ZTNA) and SASE models to simplify operations and improve security.

Relevant extracts from official HPE Aruba Networking documentation:

- \* "Traditional VPNs are complex, hard to scale, and increase operational burden for IT teams supporting large remote workforces."
- \* "Remote workforce expansion has exposed the limitations of VPN architectures, including poor user experience, difficulty scaling, and excessive troubleshooting requirements."
- \* "ZTNA provides a simplified alternative to VPN by offering application-specific access with least privilege, reducing complexity and support requirements."
- \* "With Aruba's SSE and ZTNA solutions, organizations can eliminate VPN sprawl while improving both security and user experience." Why the other options are incorrect:
- \* While external traffic does increase, modern data centers are designed to handle distributed traffic patterns-this is not the primary challenge.
- \* Lack of Wi-Fi 6 support at home is a limitation but not a core IT admin challenge.
- \* Traffic shift away from campus is true, but the bigger issue is the complexity of managing VPN solutions for remote users.
