Oracle APEX Cloud Developer Professional Sample Questions (Q18-Q23):

NEW QUESTION # 18

You created a custom theme for an application. Examine these requirements: (Assuming requirements mandate syncing changes). Which solution guarantees that any changes to the master theme are reflected in the copied theme?

- A. Copying the changes made in the master theme to the copied theme.
- **B. Subscribing the copied theme to the master theme and refreshing the theme.**
- C. Refreshing the templates.
- D. Verifying the theme subscription.

Answer: B

Explanation:

Theme subscription links a copied theme to its master:

A . Subscribing and refreshing: Subscribing the copied theme (in Shared Components > Themes) to the master ensures it inherits updates. "Refresh Theme" (via Theme Roller or Utilities) syncs changes (e.g., CSS, templates) from the master, guaranteeing consistency.

B . Refreshing templates: Only updates individual templates, not the entire theme.

C . Copying changes: Manual, error-prone, and not guaranteed.

D . Verifying subscription: Confirms the link but doesn't sync changes.

Use case: Ideal for maintaining branded consistency across apps.

NEW QUESTION # 19

Which three Theme Components are available out-of-the-box with the Universal Theme?

- A. REST Data Sources
- **B. Badge**
- **C. Calendar**
- **D. Comments**

Answer: B,C,D

Explanation:

The Universal Theme (Theme 42) provides pre-built components:

A . Calendar: A region type for date-based displays (e.g., events), styled with Universal Theme templates (e.g., FullCalendar integration).

B . Comments: A region type for user feedback or notes, with built-in styling and moderation options.

C . Badge: A UI component for displaying counts or statuses (e.g., "5 New"), often in navigation or lists, styled via CSS classes.

D . REST Data Sources: A data feature, not a theme component; it's a Shared Component, not a UI element tied to Universal Theme.

Technical Insight: These components leverage Universal Theme's CSS (e.g., t-Badge, t-Calendar) and JavaScript for interactivity, reducing custom coding.

Use Case: A dashboard with a Calendar for schedules, Comments for feedback, and Badges for unread alerts.

Pitfall: Customizing requires Theme Roller or CSS overrides.

NEW QUESTION # 20

You have an Interactive Grid component and you are enabling the Save Report functionality. As what can end users save the report type?

- A. As Primary
- **B. As Private and Public only**
- C. As Private and Primary only

Answer: B

Explanation:

In an Interactive Grid, the "Save Report" functionality allows end users to save customizations (e.g., filters, column order). The available options are:

Private: Saved for the individual user only, visible only to them.

Public: Saved and shared with all users of the application, if permitted by the developer.

Primary: This is a developer-defined default report, not an end-user save option. End users cannot overwrite the Primary report; they can only save as Private or Public (if enabled via the "Allow Public Reports" attribute).

This flexibility empowers users to personalize grids while allowing shared configurations, enhancing collaboration and usability.

NEW QUESTION # 21

Which two layout modes are available for Page Designer under Utilities?

- A. Three Pane
- B. Single Pane
- C. Four Pane
- D. Two Pane

Answer: A,D

Explanation:

Page Designer's layout modes under Utilities adjust the workspace:

- A . Two Pane: Splits into two vertical sections (e.g., tree and properties), ideal for focused editing.
 - B . Three Pane: Adds a third section (e.g., tree, grid, properties), offering a balanced view for complex pages.
 - C . Four Pane: Not available; APEX limits to three for usability.
 - D . Single Pane: Not an option; the minimum is two panes.
- Developers toggle these via the Utilities menu to optimize screen real estate based on task complexity.

NEW QUESTION # 22

Which two actions are performed by using the Object Browser?

- A. Browse database objects of the current schema.
- B. Restore dropped database objects.
- C. Create a lookup table based on a column in the current table.
- D. Create and run SQL scripts.

Answer: A,C

Explanation:

Object Browser in SQL Workshop is a GUI for managing schema objects:

- B . Browse database objects of the current schema: Displays tables, views, procedures, etc., in a tree view, allowing inspection of definitions (e.g., columns, constraints) and data previews.
 - D . Create a lookup table based on a column in the current table: From a table's column (e.g., DEPTNO), you can generate a lookup table (e.g., DEPT_LOOKUP) with unique values, automating reference table creation.
 - A . Restore dropped objects: Not supported; this requires DBA tools (e.g., FLASHBACK TABLE).
 - C . Create and run SQL scripts: This is a SQL Scripts feature, not Object Browser.
- Practical tip: Use "Create Lookup Table" to normalize data efficiently.
