VMware Cloud Foundation 9.0 Administrator Sample Questions (Q84-Q89):

NEW QUESTION # 84

When planning to migrate from an external Platform Services Controller (PSC) architecture to an embedded PSC in vCenter Server Appliance (VCSA), which critical step must be performed first to ensure a supported migration path?

- A. Confirming that the vCenter and PSC are at the same version and build
- B. Adding an extra vNIC to the PSC for data replication
- C. Placing the PSC in Maintenance Mode
- D. Detaching all ESXi hosts from vCenter prior to migration

Answer: A

Explanation:

The external PSC and vCenter must match in version/build before an embedded migration. Having them mismatched can lead to migration failure. Maintenance Mode (C) doesn't apply to PSC, and removing hosts first (D) isn't a requirement.

NEW QUESTION # 85

An ESXi host experiences repeated PSOD (Purple Screen of Death) events.

Which tool or method is most useful for diagnosing kernel-level issues?

- A. vCenter Server Alarms
- B. vCenter Event Console
- C. ESXi Shell access for log reviews

- D. **vm-support** command to collect a support bundle

Answer: D

Explanation:

Using **vm-support** collects logs and diagnostic files needed for kernel-level debugging. Shell access can view logs, but the support bundle is more comprehensive. Alarms and the Event Console track events, not deep kernel crashes.

NEW QUESTION # 86

An administrator wants to implement a solution that will centrally manage and distribute Virtual Machine (VM) templates, ISO images, and other files across multiple physical locations and VMware Cloud Foundation (VCF) instances.

Which solution should the administrator implement?

- A. vSAN Storage Cluster
- B. Network File Copy
- C. Shared VMFS datastore
- D. **Content Library**

Answer: D

Explanation:

A Content Library is the VMware solution designed to centrally manage and distribute VM templates, ISO images, and other files across multiple sites and VCF instances. It supports synchronization between libraries, ensuring consistency and efficiency in multi-location environments.

NEW QUESTION # 87

Which step should an administrator take to optimize memory usage in a VM environment running multiple Windows Server VMs?

- A. Disable Transparent Page Sharing (TPS) on all hosts
- B. **Configure the Memory Ballooning driver within the guest OS**
- C. Set large CPU reservations in Resource Pools
- D. Enable vSphere Replication for each VM

Answer: B

Explanation:

Memory Ballooning allows the hypervisor to reclaim unused guest OS memory. TPS is typically enabled by default. Replication and large CPU reservations won't directly optimize memory usage.

NEW QUESTION # 88

Which methods can help encrypt or protect data stored within a VMware environment?

- A. Enabling ESXi secure logging
- B. **VM Encryption for individual VMs' virtual disks**
- C. vSAN Encryption for hyper-converged storage
- D. Storing all VM data on ephemeral port groups

Answer: B,C

Explanation:

vSAN Encryption (A) secures data at rest on vSAN, and VM Encryption (B) protects specific VM disks.

Ephemeral port groups (C) relate to networking, not storage encryption, and secure logging (D) ensures log integrity but doesn't encrypt VM data.
