Real Palo Alto Networks XSOAR-Engineer practice test questions like scenarios that the online test creates will enable you to control anxiety. Self-evaluation reports of the XSOAR-Engineer web-based practice test will inform you where you exactly stand before the final Palo Alto Networks XSOAR-Engineer test. XSOAR-Engineer Exam Questions in this Palo Alto Networks XSOAR-Engineer practice test are similar to the real test.

Palo Alto Networks XSOAR Engineer Sample Questions (Q129-Q134):

NEW QUESTION # 129

The XSOAR administrator is writing an automation and would like to return an error entry back into XSOAR if a particular command errors out. How can this be achieved?

- A. Using a print statement
- B. Using the `demisto.debug()` function
- C. Using the `demisto_error()` function
- D. Using the `return_error()` function

Answer: B

NEW QUESTION # 130

When using the playbook debugger, what may be the cause of a starred incident missing from the Test Data selections?.

- A. The incident has been restricted.
- B. Closed incidents are not visible in the debugger.
- C. Starred incidents are not visible in the debugger.
- D. The incident type is set incorrectly.

Answer: B

Explanation:

The XSOAR Playbook Debugger documentation states that only open incidents can be selected as Test Data.

Closed incidents do not appear in the debugger's incident selection list.

Starring an incident does not override this limitation; if it is closed, it will not appear.

NEW QUESTION # 131

What will happen if a playbook debugger is left running for more than 24 hours?

- A. By default, the system closes automatically any debugger session that have been open 180 minutes.
- B. The session must be stopped during 180 minutes manually by administrator, user will receive notification automatically.
- C. The session will be running till stopped manually by administrator.
- D. By default, every 24 hours, the system closes any debugger sessions that have been open for more than 180 minutes.

Answer: A

NEW QUESTION # 132

Assuming an incident type configuration runs the associated playbook automatically, which pre-process rule action can preserve matching incidents without triggering the playbook?.

- A. Drop.
- B. Close.
- C. Link.

- D. Update.

Answer: C

Explanation:

Pre-process rules allow XSOAR to evaluate incoming events before they are fully created as incidents. These rules can suppress, modify, or relate events based on defined criteria. According to the Admin Guide, when a pre-process rule uses theLinkaction, XSOAR links the incoming event to an existing incident without triggering the standard incident creation process or subsequent playbook execution. This preserves the data for correlation and investigation while preventing duplicate or unnecessary playbook runs.

TheCloseaction (A) suppresses incidents completely and is used to auto-close unwanted events; this prevents preservation of the event and does not trigger the playbook. TheDropaction (C) discards incoming events entirely, removing them from the system and not preserving them. TheUpdateaction (B) modifies or enriches existing incidents but does not stop the playbook from running on newly created incidents of that type.

Because the requirement is to preserve the incident while also preventing automatic playbook execution, the Link action is the only workflow that fulfills both requirements according to XSOAR's pre-process rule architecture. Thus, optionDis correct.

NEW QUESTION # 133

In Cortex XSOAR multi tenant setup, when content from a development server is pushed to the remote repository, where in the production server can the updates be found?

- A. Main Account
- B. Agent tools
- **C. Tenants**
- D. Marketplace

Answer: C

Explanation:
