

Reliable DSPM-Deploy-and-Administer Dumps - Latest Forcepoint Certified Forcepoint DSPM - Professional: Deploy and Administer Exam - DSPM-Deploy-and-Administer Reliable Test Materials

For Forcepoint DSPM-Deploy-and-Administer certification test, are you ready? The exam comes in sight, but can you take the test with confidence? If you have not confidence to sail through your exam, here I will recommend the most excellent reference materials for you. The latest DSPM-Deploy-and-Administer Certification Training dumps that can pass your exam in a short period of studying have appeared. The dumps are provided by Prep4SureReview.

The 24/7 support system is available for our customers so that they can message us anytime. We will solve all of their queries or assist them in everything as soon as possible. Free demos and up to 365 days of free updates are also available at Prep4SureReview. Buy the Forcepoint DSPM-Deploy-and-Administer Exam Dumps now and achieve your destination with us!!

Forcepoint DSPM-Deploy-and-Administer Reliable Test Materials & DSPM-Deploy-and-Administer Valid Exam Voucher

Nowadays in this information-based world the definition of the talents has changed a lot and the talents mean that the personnel boost both the knowledge in DSPM-Deploy-and-Administer area and the practical abilities now. So if you want to be the talent the society actually needs you must apply your knowledge into the practical working and passing the test DSPM-Deploy-and-Administer Certification can make you become the talent the society needs. If you buy our DSPM-Deploy-and-Administer study materials you will pass the DSPM-Deploy-and-Administer exam successfully and realize your goal to be the talent.

Forcepoint Certified Forcepoint DSPM - Professional: Deploy and Administer Exam Sample Questions (Q16-Q21):

NEW QUESTION # 16

When creating a Detector, which field allows you to exclude specific criteria from the search?

- A. Not Add
- B. Exclude
- **C. Not contain**
- D. Except

Answer: C

Explanation:

The correct answer is A. Not contain . In Forcepoint DSPM, detector creation uses inclusion and exclusion logic to control what should trigger a detector match. The Contain field defines the positive match criteria:

the keywords, phrases, regular expressions, extensions, or path terms that the detector should search for. The Not Contain field provides the negative condition: terms or criteria that should be ignored even when the broader detector logic would otherwise match.

Forcepoint's DSPM documentation for Content Detectors states that if there are terms the detector should ignore, they are set in the Not Contain field. The same concept appears in Path Detectors, where administrators define the search method, populate Contain with triggering terms, and then use Not Contain to exclude terms from matching.

This matters operationally because detectors can otherwise generate excessive or misleading matches. For example, a detector looking for payroll-related content may include "salary" or "compensation" in Contain, while excluding harmless template, archive, or test terms in Not Contain. Not Add, Except, and Exclude are not the documented detector-configuration field names.

References/topics: Administration > Detectors, Content Detectors, Path Detectors, Contain/Not Contain logic, AI Mesh detector contribution.

NEW QUESTION # 17

Geoff is configuring the Data Asset Inventory. Which Security Posture Policy Control options are available for him to use? Select three.

- A. Select
- B. Yes/No
- C. Checkbox
- D. Text
- E. GQL query

Answer: A,B,D

Explanation:

The correct options are Yes/No, Select, and Text. In Forcepoint DSPM, Security Posture Policy Controls are configured under Policy Center > Compliance Hub > Data Mapping. These controls define the metadata fields that appear in the Data Asset Inventory, allowing data owners to describe and govern critical data assets using consistent business and compliance attributes. Forcepoint describes Data Mapping as the framework used to define fields available in the Data Asset Inventory so data owners can assign metadata tags to critical data. Examples include retention period, business owner, regulatory scope, review status, and project name.

The documented control types are Text, Yes/No, and Select. Text creates a free-form text field, useful for values such as project name or business context. Yes/No creates a binary drop-down, appropriate for simple governance questions such as whether a review is required. Select creates a predefined selection menu aligned with common data governance frameworks.

GQL query is not a Data Mapping control type; GQL is used elsewhere for search and Controls Orchestration rule conditions. Checkbox is also not listed as a supported Security Posture Policy Control option. References/topics: Compliance Hub, Data Mapping, Security Posture Policy Controls, Data Asset Inventory, Metadata Governance.

NEW QUESTION # 18

Why is it important to assign a data owner in each department in Forcepoint DSPM?

- A. To ensure clear accountability and responsibility for data management.
- B. To improve the effectiveness of detectors.
- C. To decrease the number of false positive alerts.
- D. To limit the creation of files by individual contributors.

Answer: A

Explanation:

Assigning a data owner is important because Forcepoint DSPM treats ownership as a governance and accountability control. The correct answer is C: it ensures clear accountability and responsibility for data management. Data owners are the business stakeholders responsible for understanding the purpose, sensitivity, approved location, access model, and required protections for departmental data assets. Without an assigned owner, security teams may discover risk but lack the business context needed to validate whether exposure, access, retention, or classification is appropriate.

Forcepoint's DSPM release documentation describes Data Ownership as assigning clear ownership to each data asset to ensure accountability and foster responsibility. It also explains that once policies and controls are defined, DSPM can monitor for policy violations and alert the right data owner. This shows why ownership is central to operational response: findings are not just technical alerts; they are routed to accountable stakeholders who can approve, remediate, or explain the data condition.

The other options are incorrect. Data ownership does not restrict file creation by contributors, directly tune detector precision, or

independently reduce false positives. Those outcomes depend on access controls, detector configuration, classification logic, and policy tuning. References/topics: Compliance Hub, Departments, Data Asset Inventory, Data Ownership, Controls Orchestration, Policy Violation Response .

NEW QUESTION # 19

What are the key organizational elements for creating a dashboard in Forcepoint DSPM? Select two.

- A. Menus
- B. Status bars
- C. Widgets
- D. Toggle switches
- E. Panels

Answer: C,E

Explanation:

The correct answers are Widgets and Panels . In Forcepoint DSPM Analytics, dashboards are organized as boards that present scan-derived security, compliance, and data-risk information. The primary structural components used to build those dashboards are panels and widgets. Forcepoint states that dashboards are

"primarily constructed of panels and widgets," and explains that each panel can contain one or more widgets.

A panel acts as the container that organizes multiple visual components into a coherent dashboard layout, while a widget is the smaller information component that displays data from selected datasets such as files, trustees, connectors, or agents.

This structure matters because dashboards are not just static reports; they are configurable analytical workspaces. Widgets provide the actual data presentation, such as counters, charts, maps, text blocks, tables, incidents, dual data grouping, or multi-counter views. Forcepoint separately lists these as available widget types, each with its own customization options. Panels then provide the organizational layer that groups these widgets logically by use case, such as exposure, classification, incident review, user risk, or compliance posture. Toggle switches, menus, and status bars may appear in the interface, but they are not the dashboard- building elements. References/topics: Analytics, Components of a Dashboard, Widgets, Panels, Custom Dashboards .

NEW QUESTION # 20

The Forcepoint DSPM dashboards can simplify which of the following tasks? Select three.

- A. Identifying critical data assets.
- B. Identifying ROT data.
- C. Identifying high-risk users.
- D. Identifying database assets.
- E. Identifying user credentials.

Answer: A,B,C

Explanation:

The correct selections are Identifying high-risk users , Identifying ROT data , and Identifying critical data assets . Forcepoint DSPM Analytics includes pre-defined dashboards, or boards, that summarize scan findings into operational views for security, compliance, and data-governance teams. Forcepoint states that Analytics boards present scan-derived metrics such as overexposed files, sensitive data, and data at risk, helping teams make informed decisions about vulnerabilities, risks, and compliance issues.

The pre-defined board list directly supports the three correct options. High Risk Users identifies users with excessive permissions or abnormal access patterns, supporting insider-threat reduction and least-privilege enforcement. ROT Data identifies redundant, obsolete, or trivial data so teams can reduce clutter, unnecessary exposure, and policy risk. Key Data Overview highlights critical data assets, allowing teams to prioritize protection of the organization's most valuable and sensitive information.

The other answers are not the best matches for dashboard simplification in this question. Database assets are handled through structured-data discovery and database-specific workflows, not the named dashboard use cases here. User credentials may be detected as sensitive content in scans, but identifying credentials is not listed as a primary pre-defined dashboard task.

References/topics: Analytics, Pre-defined Boards, Data Classification, Data Hygiene, Data Risk, High Risk Users, ROT Data, Key Data Overview .

Prep4SureReview is a website that can provide all information about different IT certification exam. Prep4SureReview can provide you with the best and latest exam resources. To choose Prep4SureReview you can feel at ease to prepare your Forcepoint DSPM-Deploy-and-Administer exam. Our training materials can guarantee you 100% to pass Forcepoint certification DSPM-Deploy-and-Administer exam, if not, we will give you a full refund and exam practice questions and answers will be updated quickly, but this is almost impossible to happen. Prep4SureReview can help you pass Forcepoint Certification DSPM-Deploy-and-Administer Exam and can also help you in the future about your work. Although there are many ways to help you achieve your purpose, selecting Prep4SureReview is your wisest choice. Having Prep4SureReview can make you spend shorter time less money and with greater confidence to pass the exam, and we also provide you with a free one-year after-sales service.
