## Valid 212-82 Exam Experience - Reliable 212-82 Test Preparation

Our 212-82 practice engine is admired by all our customers for our experts' familiarity and dedication with the industry all these years. By their help, you can qualify yourself with high-quality 212-82 exam materials. Our experts pass onto the exam candidate their know-how of coping with the exam by our 212-82 Training Questions. And I can say that our 212-82 study guide is the unique one on the market for its high-effectiveness.

ECCouncil 212-82 Exam is a computer-based test that consists of 100 multiple-choice questions. Candidates have two hours to complete the exam, and a passing score of 70% is required to obtain certification. 212-82 exam is administered by Pearson VUE, a global leader in computer-based testing, and is available at testing centers around the world. Candidates who successfully pass the

exam will receive a certificate and digital badge that they can use to showcase their skills and knowledge to potential employers.

## **ECCouncil Certified Cybersecurity Technician Sample Questions (Q103-Q108):**

### **NEW QUESTION # 103**

Kasen, a cybersecurity specialist at an organization, was working with the business continuity and disaster recovery team. The team initiated various business continuity and discovery activities in the organization. In this process, Kasen established a program to restore both the disaster site and the damaged materials to the pre-disaster levels during an incident.

Which of the following business continuity and disaster recovery activities did Kasen perform in the above scenario?

- A. Response
- B. Resumption
- **C. Recovery**
- D. Prevention

**Answer: C**

### **NEW QUESTION # 104**

A global financial Institution experienced a sophisticated cyber-attack where attackers gained access to the internal network and exfiltrated sensitive data over several months. The attack was complex, involving a mix of phishing, malware, and exploitation of system vulnerabilities. Once discovered, the institution initiated its incident response process. Considering the nature and severity of the incident, what should be the primary focus of the incident response team's initial efforts?

- A. Implementing a communication plan to manage public relations and customer communication regarding the breach
- B. Conducting a comprehensive system audit to identify all vulnerabilities and patch them immediately
- **C. Isolating affected systems to prevent further data exfiltration and analyzing network traffic for anomalies**
- D. Notifying law enforcement and regulatory bodies immediately to comply with legal and regulatory requirements

**Answer: C**

### **NEW QUESTION # 105**

Desmond, a forensic officer, was investigating a compromised machine involved in various online attacks. For this purpose, Desmond employed a forensic tool to extract and analyze computer-based evidence to retrieve information related to websites accessed from the victim machine.

Identify the computer-created evidence retrieved by Desmond in this scenario.

- **A. Cookies**
- B. Documents
- C. Compressed files
- D. Address books

**Answer: A**

Explanation:

Cookies are the computer-created evidence retrieved by Desmond in this scenario. Cookies are small files that are stored on a user's computer by a web browser when the user visits a website.

Cookies can contain information such as user preferences, login details, browsing history, or tracking data. Cookies can be used to extract and analyze computer-based evidence to retrieve information related to websites accessed from the victim machine.

### **NEW QUESTION # 106**

A software company is developing a new software product by following the best practices for secure application development.

Dawson, a software analyst, is checking the performance of the application on the client's network to determine whether end users are facing any issues in accessing the application.

Which of the following tiers of a secure application development lifecycle involves checking the performance of the application?

- **A. Development**

- B. Staging
- C. Quality assurance (QA)
- **D. Testing**

**Answer: D**

Explanation:

The testing tier of a secure application development lifecycle involves checking the performance of the application on the client's network to determine whether end users are facing any issues in accessing the application. Testing is a crucial phase of software development that ensures the quality, functionality, reliability, and security of the application. Testing can be done manually or automatically using various tools and techniques, such as unit testing, integration testing, system testing, regression testing, performance testing, usability testing, security testing, and acceptance testing.

#### NEW QUESTION # 107

Andre, a security professional, was tasked with segregating the employees' names, phone numbers, and credit card numbers before sharing the database with clients. For this purpose, he implemented a deidentification technique that can replace the critical information in database fields with special characters such as asterisks (\*) and hashes (#).

Which of the following techniques was employed by Andre in the above scenario?

- A. Tokenization
- **B. Masking**
- C. Bucketing
- D. Hashing

**Answer: B**

Explanation:

Masking is the technique that Andre employed in the above scenario. Masking is a deidentification technique that can replace the critical information in database fields with special characters such as asterisks (\*) and hashes (#). Masking can help protect sensitive data from unauthorized access or disclosure, while preserving the format and structure of the original data. Tokenization is a deidentification technique that can replace the critical information in database fields with random tokens that have no meaning or relation to the original data.

Hashing is a deidentification technique that can transform the critical information in database fields into fixed-length strings using a mathematical function. Bucketing is a deidentification technique that can group the critical information in database fields into ranges or categories based on certain criteria.
