Juniper JN0-364 Exam | JN0-364 Latest Exam Book - Bring you The Best JN0-364 Valid Test Tips

The pass rate reaches 98.95%, and if you choose us, we can ensure you pass the exam. JN0-364 study materials are edited by skilled professionals, and they are quite familiar with the dynamics of the exam center, therefore JN0-364 study materials can meet your needs for exam. What's more, we offer you free demo to try before purchasing JN0-364 Exam Dumps, so that you can know the mode of the complete version. If you have any questions about JN0-364 study materials, you can ask for our service staff for help.

Juniper Service Provider Routing and Switching, Specialist (JNCIS-SP)

Sample Questions (Q51-Q56):

NEW QUESTION # 51

Which feature allows Junos OS to perform recursive lookups for static route next hops?

- A. reject
- B. discard
- C. next-table
- **D. resolve**

Answer: D

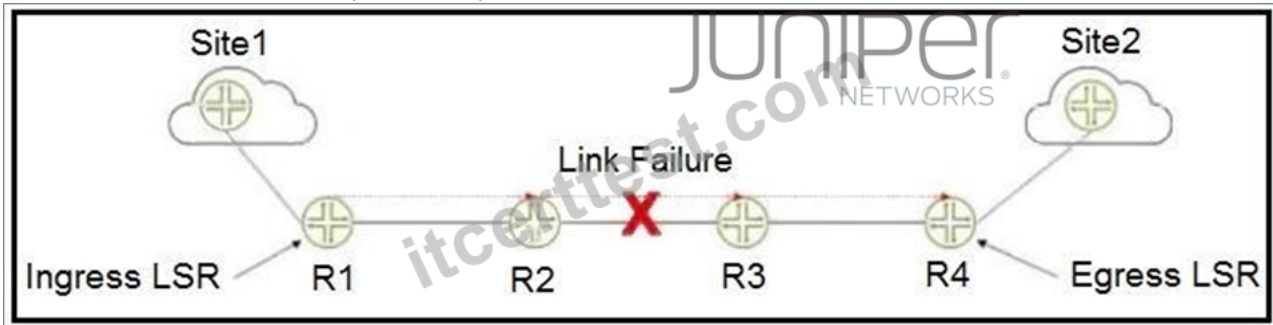

Explanation:

The resolve option enables recursive next-hop resolution for static routes in Junos OS. When configured, the router performs a lookup in the routing table to determine how to reach the specified next-hop address, allowing the next hop to be resolved through another route instead of requiring it to be directly connected.

NEW QUESTION # 52

Referring to the exhibit, you have an established RSVP LSP between R1 and R4 when you experience a link failure between R2 and R3.

Which two statements are correct? (Choose two.)

- A. R2 sends a PathTear message upstream to R1 signaling the link failure.
- **B. R3 sends a ResvTear message downstream to R4 signaling the link failure.**
- **C. R2 sends a ResvTear message upstream to R1 signaling the link failure.**
- D. R3 sends a PathTear message downstream to R4 signaling the link failure.

Answer: B,C

Explanation:

Upon a link failure in an RSVP-sigaled LSP, the router upstream of the failure (R2) sends a PathTear message upstream to the ingress router (R1), and the router downstream of the failure (R3) sends a ResvTear message downstream to the egress router (R4). These messages signal the failure and initiate tear down of the LSP state in the respective directions.

NEW QUESTION # 53

You are designing an MPLS network and want to ensure that traffic traverses an LSP between PE routers that follow an explicit path through the core.

Which protocol would accomplish this task?

- **A. RSVP**
- B. BGP
- C. LDP
- D. IS-IS

Answer: A

Explanation:

RSVP-TE is used to signal MPLS traffic-engineered LSPs and supports explicit path configuration. This allows you to define the exact sequence of core hops the LSP must follow between PE routers, ensuring traffic traverses the desired path rather than simply

following the IGP shortest path.

NEW QUESTION # 54

What is a key differentiator of generate routes from aggregate routes?

- A. Generate routes cannot be used as a gateway of last resort.
- B. Generate routes have a default next-hop value of reject.
- C. Generate routes use a forwarding next hop.
- D. Generate routes have a default preference value of 210.

Answer: C

Explanation:

Generated routes are a type of route that can be created to summarize and generate more specific routes within the routing table. Unlike aggregate routes, which summarize existing routes and inherit a next-hop, generated routes do not necessarily have to match an existing route and will have a next-hop of reject by default unless specified otherwise.

NEW QUESTION # 55

Referring to the exhibit, which two statements are correct? (Choose two.)

```
[edit]
user@router# show interfaces ge-0/0/0
unit 0 {
  family bridge {
    interface-mode trunk;
    vlan-id-list 101-120;
  }
}
[edit]
user@router# show interfaces ge-0/0/1
flexible-vlan-tagging;
unit 0 {
  vlan-id 200;
  family bridge {
    interface-mode trunk;
    inner-vlan-id-list 101-120;
  }
}
...
[edit]
user@router# show bridge-domains
bd {
  vlan-id-list 101-120;
```

- A. Traffic ingressing ge-0/0/0 that is tagged with VLAN 101 will egress ge-0/0/1 unchanged.
- B. Traffic ingressing ge-0/0/0 that is tagged with VLAN 101 will egress ge-0/0/1 with an outer VLAN tag of 200.
- C. Traffic ingressing ge-0/0/0 that is tagged with VLAN 200 will egress ge-0/0/1 with an outer VLAN tag of 200.
- D. Traffic ingressing ge-0/0/0 that is tagged with VLAN 100 will be dropped.

Answer: B,D

NEW QUESTION # 56

.....

There are a number of distinctions of our JN0-364 Exam Questions that make it superior to those offered in the market. Firstly, you will find that there are three different versions of our JN0-364 learning guide: the PDF, Software and APP online. Though the content is the same, but the displays are all different. And you can study in all kind of conditions if you have three of them. Secondly, the prices of every version are favourable. And you can buy the Value Pack with discounted price.
