TDA-C01 Exam Actual Tests, TDA-C01 Exam Pass Guide

TDA-C01 exam certification is very useful in your daily work in IT industry. When you decide to attend the TDA-C01 exam test, it

is not an easy thing at begin. First, you should have a detail study plan and have a basic knowledge of the TDA-C01 actual test. Here, Tableau TDA-C01 test pdf dumps are recommended to you for preparation. TDA-C01 PdfTorrent will tell you the basic question types in the actual test and give the explanations where is available. With the help of the TDA-C01 vce dumps, you will be confident to attend the TDA-C01 actual test and get your certification with ease.

Tableau Certified Data Analyst Sample Questions (Q142-Q147):

NEW QUESTION # 142

You have the following dataset.

You plan to create a dashboard that will be filtered to show only data that is relevant to a specific Tableau user based on the Tableau_User_Name field. You need to create a boolean calculated field to place on the data source filter. Which formula should you use for the filter?

- A. NAME(Tableau-USER-NAME)
- B. NAMEUSERNAME()
- C. ISFULLNAME(Tableau_USER_NAME)=USERNAME()
- D. USERNAME()=(Tableau_USER_NAME)

Answer: D

Explanation:

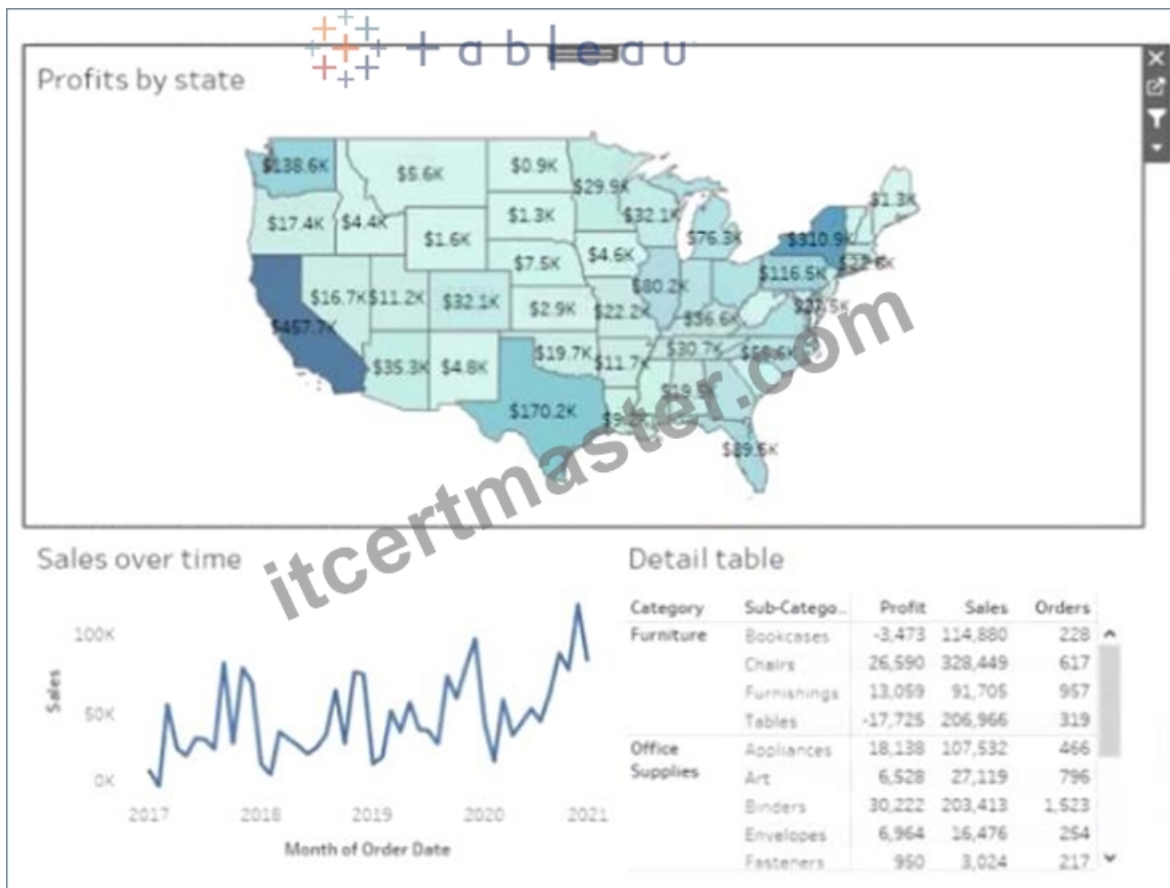

To create a boolean calculated field to place on the data source filter, you should use the formula `USERNAME() = [Tableau_user]`. This formula will return TRUE if the current Tableau user name matches the value in the Tableau_user field, and FALSE otherwise. You can use this formula as a data source filter by dragging it to the Filters shelf and selecting TRUE from the menu. This will filter the data to show only the rows that are relevant to the specific Tableau user.

The other options are not correct for this scenario. `NAME([Tableau_user])` is not a valid function in Tableau. `ISFULLNAME([Tableau_user]) = USERNAME()` is not a valid expression in Tableau. `'S' + STR([Sales]/1000)` is not a boolean expression, but a string expression that converts sales to thousands with a prefix of "S". References: https://help.tableau.com/current/pro/desktop/en-us/filtering_datasource.htm https://help.tableau.com/current/pro/desktop/en-us/functions_functions_logical.htm#USERNAME https://help.tableau.com/current/pro/desktop/en-us/calculations_calculatedfields.htm

In Tableau, the `USERNAME()` function returns the username of the user who is currently logged in. To create a filter that only shows data relevant to the logged-in Tableau user, a boolean calculated field can be created to compare the current username with the usernames listed in the Tableau_User_Name field of the dataset. Therefore, the correct formula for this filter is `USERNAME() = [Tableau_USER_NAME]`, which will return true for rows where the Tableau_User_Name matches the current user's username.

NEW QUESTION # 143

You have the following dashboard.

Currently the map is used as a filter that affects the data on the other sheets of the dashboard. You need to configure the dashboard to ensure that selecting a data point on the map only filters the Detail table. What should you do?

- A. From the context menu of Sales over time select Deselect
- **B. From the context menu of Sales over time select Remove Dashboard Item**
- C. From the context menu of Profits by State deselect Use as Filter
- D. From the context menu of Sales over time select Ignore Actions

Answer: B

NEW QUESTION # 144

You have a Tableau workbook.

You want to make the workbook available in Tableau Online.

What should you do?

- **A. From the Server menu, select Publish Workbook.**
- B. From the Server menu, select Tableau Public, and then select Save to Tableau Public.
- C. From the Server menu, select Publish Data Source.
- D. From the File menu, select Export Packaged Workbook.

Answer: A

Explanation:

To make a workbook available in Tableau Online, you need to publish it from Tableau Desktop to Tableau Online. You can do this by selecting Publish Workbook from the Server menu, signing in to your Tableau Online account, choosing a project and a name for your workbook, and clicking Publish. This will upload your workbook and its data sources to Tableau Online, where you can view, edit, and share it with others. References:

NEW QUESTION # 145

A colleague provides a Data Analyst with access to a folder that has the following files:

- * Sales.csv
- * Book1.json
- * Sales.tds
- * Export.mdb

Which file can contain information for connecting to an external data source, such as an SQL Server database?

- A. Sales.csv
- B. Book1.json
- C. Export.mdb
- D. Sales.tds

Answer: A

NEW QUESTION # 146

You receive a tab-delimited data file name sales.tsv.

You need to connect to the file.

Which option should you select in Tableau Desktop?

Answer:

Explanation:

To connect to a tab-delimited data file named sales.tsv, you should select the option To a File > Text file in Tableau Desktop. This option will allow you to browse and select the file from your local or network drive and connect to it as a data source. You can then specify the text file properties, such as the delimiter, the text qualifier, and whether the first row contains column names. You can also join, union, or blend the data with other data sources if needed. References:
