Thanks to our diligent experts, wonderful study tools are invented for you to pass the C\_ACDET\_2506 Exam. You can try the demos first and find that you just can't stop studying if you use our C\_ACDET\_2506 training guide.

## SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q38-Q43):

### NEW QUESTION # 38

How do you format the Help Tip for a field?

- A. Select Field Configuration, select the class, and edit the field. In the Help Tip, you can format the text by selecting the string and using regular keyboard controls such as Ctrl-I, Ctrl-B.
- B. Select Field Configuration and edit the field. In the Help Tip, you can format the text by using the mouse to highlight the text and then right-clicking to access formatting options.
- C. Select Field Configuration and edit the field. In the Help Tip, you can only use plain text without any formatting options.
- **D. Select Field Configuration, select the class, and edit the field. In the Help Tip, you can add standard HTML tags for formatting**

**Answer: D**

Explanation:

SAP Ariba supports basic HTML formatting tags in the Help Tip textfield, such as <b>, <i>, and <u>, which allow formatting like bold, italics, and underline within the help tips. This provides flexibility in presenting clear, well-structured guidance to end users. Options B and C suggesting mouse-based formatting or keyboard shortcuts are not supported because the Help Tip editor is a plain text input that parses HTML but does not offer a rich-text UI. Option D is incorrect because HTML tags are explicitly allowed for formatting.

This method enhances user experience by allowing visually distinct emphasis and line breaks in Help Tips, improving clarity without complicating the UI.

### NEW QUESTION # 39

How can you define default values on fields?

- A. Set only for Constant values
- B. Default values must be manually entered by the user
- C. Default values are not permitted
- **D. Set as Constants or Expressions based on other field values**

**Answer: D**

Explanation:

SAP Ariba allows you to define default values for fields either as static Constants or as dynamic Expressions based on other field values. Expressions use the Ariba expression language, supporting logical comparisons and operators to calculate defaults dynamically during data entry. This enables tailored defaulting logic that adapts to form context or user input. Default values are applied automatically by the system; users do not have to enter them manually unless they override the defaults. This flexibility improves data accuracy and user experience.

### NEW QUESTION # 40

Which Activate phase is tied to performing configurations in your SAP Ariba Strategic Sourcing suite solution?

- A. Setup
- B. Configure
- C. Deploy
- **D. Realize**

**Answer: D**

Explanation:

The Realize phase is where the core configuration activities happen. During Realize, the project team sets up system parameters, creates templates, defines master data fields, and configures business processes in the SAP Ariba Strategic Sourcing suite. This phase includes building, unit testing, and preparing the system for user acceptance testing. Deploy is focused on cutover and go-live, while Configure and Setup are not formal SAP Activate phases for Ariba.

### NEW QUESTION # 41

What system is provided by SAP free of charge and provides an outline of how to deploy SAP Ariba solutions with a task list and project management format?

- A. SAP for Me
- B. SAP Cloud Project Studio
- **C. SAP Ariba Enablement Workbook**
- D. SAP Cloud Application Lifecycle Management

**Answer: C**

Explanation:

The SAP Ariba Enablement Workbook is an Excel-based project management tool provided free by SAP to assist customers and implementation partners in deploying SAP Ariba solutions. It contains detailed task lists, timelines, and activities aligned to the SAP Activate methodology and is designed to guide project teams through deployment steps such as data collection, configuration, and testing. Other options like SAP for Me are customer portals, not deployment tools, and SAP Cloud Application Lifecycle Management is a broader lifecycle tool not focused specifically on Ariba deployments.

#### NEW QUESTION # 42

You can choose multiple field configurations and migrate them to the production site by creating a package in your test site. Which of the following steps should be included? Note: There are 3 correct answers to this question.

- **A. The Flex Master Data (FMD) templates must be defined and their data should be loaded in the production site before migrating FMD custom fields.**
- B. Publish the form template within the test site in order to add the form fields in the package.
- C. Discard any other packages that appear in My Action Items.
- **D. If you are migrating fields that are associated with enumerations, you should load those enumerations in the production site before migrating the fields.**
- **E. Make sure you update the string resource files in the production site before migrating the corresponding field configurations from test to production site.**

**Answer: A,D,E**

#### NEW QUESTION # 43

.....
