Recently, RealVCE has developed the newest training solutions about the popular Salesforce Certification Order-Management-Administrator Exam, including some pertinent simulation tests that will help you consolidate related knowledge and let you be well ready for Salesforce certification Order-Management-Administrator exam.

## Salesforce Order-Management-Administrator Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Data Model: This topic equips the Salesforce Order Management Administrator Consultant to showcase knowledge of critical objects such as Order, Order Summary, Fulfillment Orders, and Return Orders. It involves establishing and tracing integrations with B2C Commerce or other systems, including custom attributes. Proficiency here is pivotal for ensuring seamless data flow and robust Order Management operations within complex business environments.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>Deployment and Debugging: In this area, aspiring order management administrator consultant demonstrates a deep understanding of deployment options, life cycles, and the configuration of supporting objects. This includes creating processes from scratch, leveraging pre-set data, and validating results in runtime scenarios.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Advanced Topics: This topic challenges the Salesforce Order Management Administrator Consultant to diagnose and resolve configuration issues that hinder the launch or operation of Order Management processes. Proficiency includes troubleshooting integration problems and articulating how various processes interact to support successful deployments and system functionality.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Process Automation and Integrations: This section helps the Salesforce Order Management Administrator Consultant demonstrate the capability to deliver business value by integrating Order Management with external systems using clicks rather than code. Mastery of navigation within Order Management processes, connecting nodes, and integrating systems efficiently ensures understanding of how to implement effective solutions.</li> </ul>

Our Order-Management-Administrator pdf torrent contains the best relevant questions and verified answers which exactly matches with the Order-Management-Administrator Actual Exam and surely helps you to pass the exam. Besides, one year free update of Order-Management-Administrator practice torrent is available after purchase.

### Salesforce Order Management Administrator Accredited Professional Sample Questions (Q70-Q75):

#### NEW QUESTION # 70

An admin is working with Order Management licensed as standalone (B2C Commerce is not in the scenario).

The admin submits a JSON payload using Workbench and Workbench indicates the operation was successful. The second time the same payload is submitted the operation fails. What are two likely causes?

- A. Stock Keeping Unit values must be updated
- B. The Order Reference Number must be updated
- C. The payment data must be updated
- D. The stock levels in the org are depleted from the first order

**Answer: B,C**

Explanation:

Two likely causes that could make the second submission of the same JSON payload fail are:

The payment data must be updated. The payment data in the JSON payload contains information such as the payment method, amount, and authorization code. If the same payment data is used for the second order, it may cause a duplicate payment error or an invalid authorization error.

The Order Reference Number must be updated. The Order Reference Number is a unique identifier for each order that is generated by the external system and sent in the JSON payload. If the same Order Reference Number is used for the second order, it may cause a duplicate order error or an invalid order error.

#### NEW QUESTION # 71

What does the number of Fulfillment Orders created depend upon?

- A. Fulfillment Location, Delivery Charges and Quantity
- B. Fulfillment Location, Delivery Method and Number of Payments
- **C. Fulfillment Location, Delivery Method and Recipient Address**
- D. Fulfillment Location, Recipient Address and Quantity

**Answer: C**

Explanation:

Explanation

The number of Fulfillment Orders created depends on three factors: Fulfillment Location, Delivery Method and Recipient Address. These factors determine how the Order Items are grouped and allocated to Fulfillment Orders based on routing rules and inventory availability. For example, if an order has two items that can be fulfilled from different locations, or have different delivery methods or recipient addresses, then two Fulfillment Orders are created for that order. Verified

### NEW QUESTION # 72

What type of relationship exists between FulfillmentOrder and Location?

- A. One-to-Many Lookup (Location) FulfilledFrom Location Id
- B. Junction (Many to Many)
- **C. Many-to-One Lookup (Location) FulfilledFrom Location Id**
- D. One-to-One Lookup (Location) FulfilledFrom Location

**Answer: C**

Explanation:

The type of relationship that exists between FulfillmentOrder and Location is Many-to-One Lookup (Location) FulfilledFrom Location Id. A Lookup field is a type of custom field that creates a relationship between two objects, but does not support rollup summary fields. A Many-to-One relationship means that many child records can be related to one parent record, but not vice versa. In this case, a FulfillmentOrder has a Lookup field named FulfilledFrom Location Id that references a Location record. A Location is a record that represents a physical location from which order product items are fulfilled, such as warehouses and retail stores. A Location can have many FulfillmentOrders associated with it, but a FulfillmentOrder can only have one Location. Verified Reference: [https://help.salesforce.com/s/articleView?id=sf.custom\\_field\\_types.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.custom_field_types.htm&type=5) [https://help.salesforce.com/s/articleView?id=sf.order\\_management\\_location.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.order_management_location.htm&type=5)

### NEW QUESTION # 73

An administrator has created a flow but during testing they encounter an unhandled fault error. Which three can the administrator do to get more details for debugging?

- A. Add a screen node
- **B. Add a Display Text component which includes {! SFFlow.FaultMessage}**
- **C. Create an error connector**
- **D. Create a fault connector**
- E. Add an error node

**Answer: B,C,D**

Explanation:

Explanation

Three things that the administrator can do to get more details for debugging when encountering an unhandled fault error are: Create a fault connector. A fault connector is a special type of connector that handles errors that occur in a flow element, such as an assignment, a loop, or an action. A fault connector can route the flow to another element or end the flow with an error message. Add a Display Text component which includes {! SFFlow.FaultMessage}. A Display Text component is a screen component that displays text on a screen element in a flow. The {! SFFlow.FaultMessage} is a system variable that contains information about the error that occurred in the flow, such as the element name, error type, and error message.

Create an error connector. An error connector is a special type of connector that handles errors that occur in a screen element, such as invalid user input or required fields being left blank. An error connector can route the flow to another screen element or end the

flow with an error message.

## NEW QUESTION # 74

A customer orders 10 products. The products must be shipped to three different locations. Two of the orders are fulfilled at the same location. How many Fulfillment Orders would be created for this order?

- A. One Fulfillment Order per Fulfillment Location, totaling 2
- B. One Fulfillment Order
- C. One Fulfillment Order per item in the order, totaling 10
- D. One Fulfillment Order per destination, totaling 3

**Answer: D**

Explanation:

Explanation

The number of Fulfillment Orders that would be created for this order is one per destination, totaling 3. A Fulfillment Order is a record that represents a group of products in an order that are fulfilled together from the same location. A Fulfillment Order has a lookup relationship to the Order Summary object, and it contains information such as the fulfillment location, delivery method, status, etc. The number of Fulfillment Orders created depends on three factors: Fulfillment Location, Delivery Method and Recipient Address. These factors determine how the Order Items are grouped and allocated to Fulfillment Orders based on routing rules and inventory availability. In this case, since the products must be shipped to three different locations, three Fulfillment Orders are created for each destination. Verified References:[https://help.salesforce.com/s/articleView?id=sf.order\\_management\\_fulfillment\\_order.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.order_management_fulfillment_order.htm&type=5)

## NEW QUESTION # 75

.....

RealVCE made an absolute gem of study material which carries actual Salesforce Order-Management-Administrator Exam Questions for the students so that they don't get confused in order to prepare for Salesforce Order-Management-Administrator exam and pass it with a good score.
