NEW QUESTION # 70

Deploying an Ethernet port protection group in the upstream direction of the OLT can improve the reliability and the bandwidth of the uplink.

- A. TRUE
- B. FALSE

Answer: A

NEW QUESTION # 71

(Radio) When using the SIP protocol, a local digitmap is used for matching. If you use the default matching mode to match a 7-digit number beginning with 7727, which of the following configurations is valid?

- A. local-digitmap add huawei normal 7727xxx/7726.
- B. local-digitmap add huawei normal 772./7727xxx
- C. local-digitmap add huawei normal 7727xxx/7727
- D. local-digitmap add huawei normal 7727

Answer: C

Explanation:

Huawei digitmap syntax uses x to represent any single digit 0-9. To match a 7-digit number starting with 7727, the correct pattern is 7727xxx.

A adds an unrelated rule 7726. and uses . incorrectly as a wildcard; not recommended.

B uses 772. (invalid for the intended match) plus 7727xxx; the first part is improper.

C matches only the 4-digit string 7727.

D contains 7727xxx (correct) and an additional 7727 rule; although the extra rule is unnecessary, it does not prevent correct matching.
