CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q79-Q84):

NEW QUESTION # 79

D18912E1457D5D1DDCBD40AB3BF70D5D

The system administrator of a company is trying to find out why acceleration is not working for the traffic.

The traffic is allowed according to the rule based and checked for viruses. But it is not accelerated. What is the most likely reason that the traffic is not accelerated?

- A. The packet is the second in an established TCP connection
- B. The packets are not multicast
- C. The connection is destined for a server within the network
- **D. The connection required a Security server**

Answer: D

NEW QUESTION # 80

What is the recommended way to have a redundant Sync connection between the cluster nodes?

- **A. Use a group of bonded interfaces connected to different switches. Define a dedicated sync interface, only one interface per node using the SmartConsole / Gateways & Servers -> select Cluster Properties / Network Management.**
- B. In the SmartConsole / Gateways & Servers -> select Cluster Properties / Network Management and define two Sync interfaces per node. Use two different Switches to connect both Sync interfaces.
- C. Use a group of bonded interfaces. In the SmartConsole / Gateways & Servers -> select Cluster Properties / Network Management and define a Virtual IP for the Sync interface.
- D. In the SmartConsole / Gateways & Servers -> select Cluster Properties / Network Management and define two Sync interfaces per node. Connect both Sync interfaces without using a switch.

Answer: A

Explanation:

Explanation

The recommended way to have a redundant Sync connection between the cluster nodes is to use a group of bonded interfaces connected to different switches. In the SmartConsole / Gateways & Servers -> select Cluster Properties / Network Management, you should define a dedicated sync interface, only one interface per node.

NEW QUESTION # 81

The back-end database for Check Point Management uses:

- A. MongoDB
- B. MySQL
- C. PostgreSQL
- D. DBMS

Answer: A

Explanation:

Check Point Management uses MongoDB as its back-end database. MongoDB is a NoSQL database that offers high performance, high availability, and easy scalability, which are essential for managing the complex and dynamic nature of network security configurations and logs.

NEW QUESTION # 82

Using ClusterXL, what statement is true about the Sticky Decision Function?

- A. Is only relevant when using SecureXL
- B. Is configured using cpconfig
- C. Can only be changed for Load Sharing implementations
- D. All connections are processed and synchronized by the pivot

Answer: C

Explanation:

Explanation

The Sticky Decision Function in ClusterXL is primarily used in Load Sharing implementations. In Load Sharing, the pivot member is responsible for determining the destination of new connections and ensures that traffic from the same source IP address is directed to the same cluster member. This ensures session stickiness for the same source IP, improving load sharing efficiency.

NEW QUESTION # 83

Under which file is the proxy arp configuration stored?

- A. \$FWDIR/state/_tmp/proxy.arp on the security gateway
- B. \$FWDIR/conf/local.arp on the management server
- C. \$FWDIR/conf/local.arp on the gateway
- D. \$FWDIR/conf/local.arp on the gateway
- E. \$FWDIR/state/proxy_arp.conf on the management server

Answer: C,D

Explanation:

This file, local.arp, contains the proxy ARP configuration for the Security Gateway. It is used to configure ARP (Address Resolution Protocol) settings for network communication.

Explanation:

The proxy ARP configuration is stored under the following file:
