

Latest 2V0-13.24 Exam Topics | Valid 2V0-13.24 Test Sims

P.S. Free & New 2V0-13.24 dumps are available on Google Drive shared by ITExamDownload: https://drive.google.com/open?id=1l_xyf2NVbrt0kurml8M4k6xsOIiyA0qg

In order to meet the upcoming 2V0-13.24 exam, we believe you must be anxiously searching for relevant test materials. After all, it may be difficult to pass the exam just on your own, so we're honored you can see this message today because our 2V0-13.24 Guide quiz can solve your problems. Since inception, our company has devoted itself to studying the proposition outlines of various examinations so as to design materials closely to the contents of these 2V0-13.24 exams.

VMware 2V0-13.24 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">VMware by Broadcom Solution: This section of the exam measures the skills of cloud architects and infrastructure engineers and focuses on understanding the architecture of VMware by Broadcom solution. Candidates should be able to differentiate between various VMware Cloud Foundation architecture options based on different scenarios.
Topic 2	<ul style="list-style-type: none">Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of VMware administrators. It involves gathering and analyzing business objectives and requirements to create a conceptual model. Additionally, it covers the creation of VMware Cloud Foundation logical and physical designs. This includes prerequisites and design decisions related to Network Infrastructure, VCF Management Domain, VCF Workload Domain, VCF Edge Cluster, VCF Cloud Automation, and VCF Cloud Operations. Designs should consider availability within and across availability zones, manageability (Lifecycle Management, Scalability, Capacity Management), performance, recoverability (BCDR strategies), and security for VCF Management Components and Workloads. Workload mobility, consumption, and monitoring strategies are also addressed in this section.
Topic 3	<ul style="list-style-type: none">Troubleshoot and Optimize the VMware by Broadcom Solution: This section has NO TESTABLE OBJECTIVES in this version of the exam.

Topic 4	<ul style="list-style-type: none"> IT Architectures, Technologies, Standards: This section of the exam measures the skills of enterprise architects and solution architects and focuses on the fundamentals of IT architectures, technologies, and standards. It covers differentiating between business and technical requirements, understanding conceptual models, and logical and physical designs, and recognizing the distinctions between requirements, assumptions, constraints, and risks. Also included are availability, manageability, performance, recoverability, and security (AMPRS), developing risk mitigation strategies, documenting design decisions, and creating design validation strategies.
Topic 5	<ul style="list-style-type: none"> Install, Configure, and Administrate the VMware by Broadcom Solution: This section has NO TESTABLE OBJECTIVES in this version of the exam.

VMware 2V0-13.24 Exam | Latest 2V0-13.24 Exam Topics - High-quality Valid 2V0-13.24 Test Sims for you

With a high quality, we can guarantee that our 2V0-13.24 practice quiz will be your best choice. There are three different versions of our 2V0-13.24 guide dumps: the PDF, the software and the online. The three versions of our 2V0-13.24 learning engine are all good with same questions and answers. Our products have many advantages, I am going to introduce you the main advantages of our 2V0-13.24 Study Materials, I believe it will be very beneficial for you and you will not regret to use our products.

VMware Cloud Foundation 5.2 Architect Sample Questions (Q82-Q87):

NEW QUESTION # 82

An architect is designing a VMware Cloud Foundation (VCF)-based private cloud solution for a customer.

During the requirements gathering workshop, the customer provided the following requirement:

All SSL certificates should be provided by the company's certificate authority.

When creating the design, how should the architect classify this stated requirement?

- A. Manageability
- B. Availability
- C. Recoverability
- D. Security

Answer: D

Explanation:

In VMware Cloud Foundation (VCF) 5.2, requirements are classified using design qualities as defined in VMware's architectural methodology: Availability, Manageability, Performance, Recoverability, and Security. These qualities help architects align customer needs with technical solutions. The requirement specifies that "all SSL certificates should be provided by the company's certificate authority," which involves encryption, identity verification, and trust management. Let's classify it:

Option A: Recoverability Recoverability focuses on restoring services after failures, such as disaster recovery (DR) or failover (e.g., RTO, RPO). SSL certificates relate to securing communication, not recovery processes. The VMware Cloud Foundation 5.2 Architectural Guide defines Recoverability as pertaining to system restoration, not certificate management, making this incorrect.

Option B: Security Security encompasses protecting the system from threats, ensuring data confidentiality, integrity, and authenticity. Requiring SSL certificates from the company's certificate authority (CA) directly relates to securing VCF components (e.g., vCenter, NSX, SDDC Manager) by enforcing trusted, organization-specific encryption and authentication. The VMware Cloud Foundation 5.2 Design Guide classifies certificate usage under Security, as it mitigates risks like man-in-the-middle attacks and aligns with compliance standards (e.g., PCI-DSS, if applicable). This is the correct classification.

Option C: Availability Availability ensures system uptime and fault tolerance (e.g., HA, redundancy). While SSL certificates enable secure access, they don't directly influence uptime or failover. The VCF 5.2 Architectural Guide ties Availability to resilience mechanisms (e.g., clustered deployments), not security controls like certificates.

Option D: Manageability Manageability focuses on operational ease (e.g., monitoring, automation). Using a company CA involves certificate deployment and renewal, which could relate to management processes.

However, the primary intent is securing communication, not simplifying administration. VMware documentation distinguishes certificate-related requirements as Security, not Manageability, unless explicitly about operational workflows.

Conclusion: The requirement is best classified as Security (B), as it addresses the secure configuration of SSL certificates, a core

security concern in VCF 5.2.References:

NEW QUESTION # 83

A design requirement has been specified for a new VMware Cloud Foundation (VCF) instance. All managed workload resources must be lifecycle managed with the following criteria:

* Development resources must be automatically reclaimed after two weeks

* Production resources will be reviewed yearly for reclamation

* Resources identified for reclamation must allow time for review and possible extension What capability will satisfy the requirements?

- A. Aria Operations Rightsizing Recommendations
- **B. Aria Automation Lease Policy**
- C. Aria Suite Lifecycle Content Management
- D. Aria Automation Project Membership

Answer: B

NEW QUESTION # 84

In a conceptual model for VMware Cloud Foundation, which of the following components is typically included?

Response:

- **A. Logical groupings of services such as compute, storage, and networking**
- B. The exact number of ESXi hosts and storage devices
- C. The specific models of the servers to be used
- D. Detailed configurations of the management components

Answer: A

NEW QUESTION # 85

Which two actions can be performed to troubleshoot VMware Cloud Foundation's NSX issues?

(Choose two)

Response:

- **A. Use the NSX troubleshooting tool to analyze logs**
- B. Reconfigure the vSphere DRS settings
- C. Restart the NSX Manager service
- **D. Verify network segmentation in the NSX interface**

Answer: A,D

NEW QUESTION # 86

An architect is working on a leaf-spine design requirement for NSX Federation in VMware Cloud Foundation. Which recommendation should the architect document?

- **A. Jumbo frames on the components of the physical network between the VMware Cloud Foundation instances.**
- B. Layer 3 device that supports OSPF.
- C. Use a physical network that is configured for EIGRP routing adjacency.
- D. Ensure that the latency between VMware Cloud Foundation instances that are connected in an NSX Federation is less than 1500 ms.

Answer: A

Explanation:

NSX Federation in VMware Cloud Foundation (VCF) 5.2 extends networking and security across multiple VCF instances (e.g., across data centers) using a leaf-spine underlay network. The architect must recommend a physical network design that supports this. Let's evaluate:

Option A: Use a physical network that is configured for EIGRP routing adjacency Enhanced Interior Gateway Routing Protocol (EIGRP) is a Cisco-proprietary routing protocol. NSX Federation requires a Layer 3 underlay with dynamic routing (e.g., BGP, OSPF), but EIGRP isn't a VMware- recommended standard for NSX leaf-spine designs. BGP is preferred for its scalability and interoperability in NSX-T 3.2 (used in VCF 5.2). This option is not optimal.

Option B: Layer 3 device that supports OSPF

Open Shortest Path First (OSPF) is a supported routing protocol for NSX underlays, alongside BGP. A Layer 3 device with OSPF could work in a leaf-spine topology, but VMware documentation emphasizes BGP as the primary choice for NSX Federation due to its robustness in multi-site scenarios. OSPF is valid but not the strongest recommendation for Federation-specific designs.

Option C: Ensure that the latency between VMware Cloud Foundation instances that are connected in an NSX Federation is less than 1500 ms NSX Federation requires low latency between sites for control plane consistency (Global Manager to Local Managers). The maximum supported latency is 150 ms (not 1500 ms), per VMware specs. 1500 ms (1.5 seconds) is far too high and would disrupt Federation operations, making this incorrect.

Option D: Jumbo frames on the components of the physical network between the VMware Cloud Foundation instances This is correct. NSX Federation relies on NSX-T overlay traffic (Geneve encapsulation) across sites, which benefits from jumbo frames (MTU # 9000) to reduce fragmentation and improve performance. In a leaf-spine design, enabling jumbo frames on all physical network components (switches, routers) between VCF instances ensures efficient transport of tunneled traffic (e.g., for stretched networks). VMware strongly recommends this for NSX underlays, making it the best recommendation.

Conclusion: The architect should document D: Jumbo frames on the components of the physical network between the VMware Cloud Foundation instances. This aligns with VCF 5.2 and NSX Federation's leaf-spine design requirements for optimal performance and scalability.

NEW QUESTION # 87

.....

Our company deeply knows that product quality is very important, so we have been focusing on ensuring the development of a high quality of our 2V0-13.24 test torrent. All customers who have purchased our products have left deep impression on our 2V0-13.24 guide torrent. Of course, the customer not only has left deep impression on the high quality of our products but also the efficiency of our products. Our 2V0-13.24 Exam Questions can help you save much time, if you use our products, you just need to spend 20-30 hours on learning, and you will pass your exam successfully. What most important is that you can download our study materials about 5~10 minutes after you purchase.
